

2/19/97

Joe

The attached note from Dean Wilson is in response to Alan Dresser's (NJ) issue to the Modeler's Workshop (also attached) which deals with the Martin's Creek Met data issue and which is relevant to the conference calls we've had with Regs. II, III, NJ, PA. Dean points out some important aspects of this issue particularly regarding the interpretation of the SO₂ NAAQS which we haven't really discussed in our conversations with them. This is associated with EPA's interpretation of the NAAQS in terms of block averages on a calendar year basis. I think this note would be very informative to Bob Kelly and Denny Lohman. After you've had a chance to review it we can discuss it and decide if we should forward to them. Thanks. Dennis
