NPDES FORM 6100-28

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY WASHINGTON, DC 20460 ANNUAL REPORT FOR STORMWATER DISCHARGES ASSOCIATED WITH

FORM Approved OMB No. 2040-0004

INDUSTRIAL ACTIVITY UNDER THE NPDES MULTI-SECTOR GENERAL PERMIT

Permit Information	
Report Year: 2018	
NPDES ID: IDR053104	
Facility Information	
Facility Name: CENTENNIAL MNE	
Facility Point of Contact	
First Name Middle Initial Last Name: Monty Johnson	
Organization:	
Title:	
Phone: 208-235-5674 Ext.	
Email: monty.johnson@simplot.com	
Facility Mailing Address	
Address Line 1: 11360 Highway 30W	
Address Line 2:	City: Pocatello
ZIP/Postal Code: 83204	State: ID
County or Similar Division: BANNOCK	

General Findings

Provide a summary of your past year's routine facility inspection documentation (see Part 3.1.2 of the permit). In addition, if you are an operator of an airport facility (Sector S) that is subject to the airport effluent limitations guidelines, and are complying with the MSGP Part 8.S.8.1 effluent limitation through the use of non-urea-containing deicers, provide a statement certifying that you do not use pavement deicers containing urea (e.g., "Urea was not used at [name of airport] for pavement deicing in the past year and will also not be used in 2015." (Note: Operators of airport facilities that are complying with Part 8.S.8.1 by meeting the numeric effluent limitation for ammonia do not need to include this statement.)

During the RY2018 comprehensive site inspection conducted on July 19, 2018, the following areas were observed: areas where industrial materials are exposed to storm water, areas identified in the SWPPP, discharge points, and control measures. All areas are in compliance and all control measures are working as designed. There were no observed incidents of non-compliance nor was there evidence of polluta nts discharged from the inactive mine site.

There were no areas of significant soil erosion observed. Natural re-vegetation has effectively covered all areas of past erosion and vegeta tion is becoming more well established around each outfall, compared to last year's observations, which further reduces the potential for s ediment to leave the site. It was sunny during the site inspection. Mine 1 area (on Montana side) is no longer required to be inspected.

The following describes industrial activity area specific observations:

Industrial Activity Area 1: Mine Area 3 consists of a reclaimed mine pit and vegetated roads. Catch basins and berms appear adequate and are in good condition.

Industrial Activity Area 2: Only a small disturbed area exists at Mine Area 4, which reduces the potential for suspended solids to be a sourc e of pollution from storm water runoff. This site is located along the Continental Divide in a rocky outcrop. Below the outcrop, the slope is well vegetated.

Industrial Activity Area 3: Standing water was observed in one stormwater detention pond in the Mine 2 area. The water in this pond was clear; any sediment contained in the pond has settled.

Provide a summary of your past year's quarterly visual assessment documentation (see Part 3.2.2 of the permit).

NA. No quarterly visual assessments were required due to inactive and unstaffed status of the facility. The facility is covered under Sector J (Non-metallic Mining and Dressing).

For any four-sample (minimum) average benchmark monitoring exceedance, if after reviewing the selection, design, installation, and implementation of your control measures and considering whether any modifications are necessary to meet the effluent limits in the permit, you determine that no further pollutant reductions are technologically available and economically practicable and achievable in light of best industry practice, provide your rationale for why you believe no further reductions are achievable (see Part 6.2.1.2 of the permit). Enter "NA" if not applicable.

NA. No benchmark sampling was required due to inactive and unstaffed status of the facility. The facility is covered under Sector J (Non-m etallic Mining and Dressing).

Provide a summary of your past year's corrective action documentation (See Part 4.4 of the permit). (Note: If corrective action is not yet completed at the time of submission of this annual report, you must describe the status of any outstanding corrective action(s).) Also describe any incidents of noncompliance in the past year or currently ongoing, or if none, provide a statement that you are in compliance with the permit.

No areas that needed corrective actions were identified at the Centennial Mine Site. No controls needed replacement, maintenance, or rep air. The JR Simplot Company was in compliance with this permit during RY2018.

Certification Information

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.
