## Routine Facility Inspection (Quarterly)

This Routine Facility Inspection Report is written in accordance with section 3.1 of the Multi Sector General Permit (MSGP).

### 3.1 Routine Facility Inspection Procedures

Conduct routine facility inspection of all areas of the facility where industrial materials or activities are potentially exposed to storm water, and of all storm water control measures used to comply with the effluent limits of this permit. Due to the low risk of storm water contamination, routine facility inspections must be conducted at the Twin Falls facility quarterly (i.e., once each calendar quarter). Inspections must be performed when the facility is in operation. You must specify the relevant inspection schedules in your SWPPP document as required in Part 5.2.5.2. These routine inspections must be performed by qualified personnel with at least one member of your storm water pollution prevention team participating.

NOTE: Per the MSGP permit at least once a calendar year the routine facility inspection must be conducted during a period when a storm water discharge is occurring. If a discharge does not occur the Environmental Manager must notify EPA of such until a variance to the sampling requirement can be obtained.

### 3.1.2 Routine Facility Inspection Documentation

You must document the findings of each routine facility inspection performed and maintain this documentation onsite with your SWPPP. **You are not required to submit your routine facility inspection findings to EPA**, unless specifically requested to do so. At a minimum, your documentation of each routine facility inspection must include:

- The inspection date and time;
- The name(s) and signature(s) of the inspector(s);
- Weather information;
- All observations relating to the implementation of control measures at the facility, including:
  - A description of any discharges occurring at the time of the inspection;
  - Any previously unidentified discharges from and/or pollutants at the site;
  - Any evidence of, or the potential for, pollutants entering the drainage system;
  - Observations regarding the physical condition of and around all outfalls, including any flow dissipation devices, and evidence of pollutants in discharges and/or the receiving water;
  - Any control measures needing maintenance, repairs, or replacement;
- Any additional control measures needed to comply with the permit requirements;
- Any incidents of noncompliance; and
- A statement, signed and certified in accordance with Appendix B, Subsection 11.

Inspection Date: 3-18-19 Time of Inspection: Start @ 10:00 AM  
Finalized @ 2:00 PM

Describe any discharges at the time of the inspection.

NONE

Any previous unidentified discharges from and/or pollutants at the site?

No ☒ Yes ☐ If yes, describe:

Any evidence of, or the potential for, pollutants entering the drainage system?

No ☒ Yes ☐ If yes, describe:

Paved areas around plant all looked excellent!

State observations regarding the physical condition of and around all outfalls (1,3,5, and 8), catch basins and containment pond, and evidence of pollutants in discharges and/or Rock Creek:

No discharges to Rock Creek have occurred. Some dry solids in accumulation pond but not a concern. All outfalls in excellent physical condition & clean. No evidence of nor identified potential for pollutant discharge in the future.

Any control measures needing maintenance, repairs, or replacement?

No ☒ Yes ☐ If yes, describe:

All PM's are effective. L4 emergency generator containment has a stress crack that has not yet compromised integrity and has been scheduled for repair.

Any additional control measures needed to comply with the permit requirements?

No ☒ Yes ☐ If yes, describe:

Any incidents of noncompliance observed or known?

No ☒ Yes ☐ If yes, describe:
