

## FORM 3

### QUARTERLY VISUAL EXAMINATION OF STORMWATER QUALITY

#### INSTRUCTIONS

The facility must conduct a visual examination of stormwater quality quarterly. This examination must be made during daylight hours once within each of the following 3 month periods:

- January - March
- April - June
- July - September
- October - December.

To conduct this visual examination, a grab sample must be collected within the first 30 minutes (or as soon thereafter as practical; no more than 1 hour) of the start of discharge of a rainfall or snowmelt event.

The examination of the sample collected must be conducted in a well lit area. Observations of the color, odor, clarity, floating solids, settled solids, suspended solids, foam, oil sheen, and other obvious indicators of stormwater pollution in the sample must be noted and recorded on the visual examination report form, which follows at the end of these instructions. Where practicable, the same individual should carry out the collection and examination of discharges.

The visual examination reports must be maintained onsite with the SWPPP.
