APPENDIX A Technical Specifications

1.0 INTRODUCTION

The STORET Central Warehouse operates as a retrieval mechanism for data submitted to the Environmental Protection Agency (EPA). The STORET Central Warehouse is composed of Extract, Transform, and Load (ETL) software which populates the STORET Central Warehouse with data, and an associated Web Interface which allows selective retrieval of data. This release provides enhancements to this functionality.

This release is identified and tracked under the configuration identifier C2.0.5, and is being provided to the Office of Wetlands, Oceans, and Watersheds (OWOW), Assessment and Watershed Protection Division, Monitoring Branch, STORET Job Assignment Manager (JAM).

2.0 REFERENCES

The STORET Project Plan dated April 13, 2004, provides tasks for developing the STORET Central Warehouse enhancements. The requirements were initiated and documented through the Change Control Board (CCB) process.

3.0 SUMMARY OF FUNCTIONALITY

The requirements associated with this release have been integrated with prior releases of the STORET Central Warehouse. The software for creating tables, populating data, and creating the Web interface is included in this deliverable. The requirements specific to this release are described below.

3.1 New Functionality

This release includes the following new functionality:

- Develop batch report system to process large data requests. Key features include:
 - Email notification when request is submitted and when request is complete.
 - Request retrieval via Uniform Resource Locator (URL) hyperlink in email notification to user.
 - Request retrieval via Web Page as secondary/backup mechanism for user.
 - Email report of pending jobs automatically generated daily to STORET Technical Support.
 - Ability to generate submitted requests upon demand by EPA Administrator.

- Immediate or Overnight processing determined by the number of retrieved rows.
- Provide ability to retrieve data based on nationally recognized Project IDs.
- Add an additional column to store generated Hydrologic Unit Codes (HUCs) and populate with HUC data submitted by user.
- Create a Batch Activity Log, executable upon demand, to show all information from DW_DATA_REQUESTS table for batch jobs.
- Create a Monthly Statistic Report executed automatically each month to show summary counts of data requests. Email report to STORET Technical Support.
- Add Habitat Assessment Category Type Code and Replicate number to ETL, Web Interface as a selectable report column, and Habitat Assessment download.

3.2 Improved Functionality

This release includes the following improved functionality:

- Modify the ETL process as follows:
 - Create indexes that are used during ETL.
 - Use DI_CHARACTERISTIC table instead of TSRCHAR table when possible.
 - Move creation of alias tables to the beginning of ETL and use them instead of TSRCHALS.
- Make the concatenated fields Category Type Code and Replicate Number default columns for the Regular, Biological, and Habitat Assessment downloads.
- Modify unit conversion to utilize TSRUOM table and incorporate reference table changes through dbfix020.
- Correct the conversion of Portable Data Logger Activity Start Times during ETL.

4.0 DEGREE OF FUNCTIONALITY

The software provided by this release fulfills the requirements agreed to with the JAM, and has been developed in accordance with the approved design specifications (Appendix A). No unresolved discrepancies are known to exist upon conclusion of testing.

5.0 INSTALLATION INSTRUCTION

This section contains the step-by-step installation instruction to create the STORET Central Warehouse. There are several noteworthy items regarding installation and batch processing:

Installation Notes:

- This release of the Central Warehouse requires Oracle 9i and JServer.
- Modify connect statements for database usernames, passwords, and connect strings as necessary.
- Edit all ETL scripts for tablespace names.
- Scripts must be run in the order listed to ensure correct software installation.
- A rollback segment named RBSBIG must exist and be on-line.
- Oracle archiving should be turned off when running the ETL scripts.
- Log files are created for each of the Structured Query Language (SQL) scripts listed in these instructions. These log files have parallel names and directory locations as the scripts that create them. Log files should be checked for errors after each step of the installation process to ensure the installation completes successfully.
- Copy the storetw directory from the “Release C2.0.5\software” directory to your C:\ drive.
- Install Oracle Spatial into the ETL database before running this ETL.
- An optional script has been provided (i.e., tbs_coalesce.sql) to coalesce the STORETDATA and STORETINDX tablespaces for improved performance. Execute this script if the storetw schema is being imported into another database (e.g., storetw schema is moved to a different production database). Connect to the database with Database Administrator (DBA) privileges to run the tbs_coalesce.sql script.
- The following two objects store data request history. Do not drop/modify them in production during the refresh cycle.
 - Table: dw_data_requests.
 - Sequence: seq_dw_data_request_id.

Batch Processing Notes:

- To report on batch activity, run “dw_batch_activity_report.sql” to generate the dw_batch_activity_report.log file. Provide report start and end dates.
- To manually process all pending Immediate batch jobs, run “exec dw_process_pendingbatch_imm”.
- To manually process submitted batch jobs by request_id, run “exec dw_process_data_request_list('x')” where x is a comma separated list of request_ID(s).
- Monthly Statistic (dw_monthly_stats) and Pending Request (dw_report_pending_requests) reporting, and Overnight batch processing (dw_process_batch_requests) are scheduled activities and run periodically without manual intervention. They can also be run manually using the following:
 - To manually report statistics for a given month, run “exec dw_monthly_stats(x)” where x is a valid date for the desired month.
 - To manually report pending requests, run “exec dw_report_pending_requests”.
 - To manually process batch jobs submitted for overnight, run “exec dw_process_batch_requests”.
- To change scheduled job timings, modify appropriate variable values in dw_glob_var.sql, run dw_glob_var.sql, then run dw_schedule_batch_jobs.sql.
- To change online and batch processing thresholds, modify appropriate variable values in the dw_glob_var.sql, then run dw_glob_var.sql.

Step-by-Step Installation:

The installation package is not dependent upon a specific drive letter. If the installation package is placed on a different drive, replace “C:” with the letter of that drive in the following instructions.

1. Open a SQL*Plus session.
- 2a. Create storetw schema with appropriate system and object privileges.
CONNECT SYSTEM/STO2ET@STORET.SDC
@C:\storetw\storetw\create_storetw.sql;
CONNECT STORET/STO2ET@STORET.SDC
@C:\storetw\storetw\storetw_grants.sql;

CONNECT STORET1/STO2ET1@STORET.SDC

@C:\storetw\storetw\storet1_grants.sql;

CONNECT SYSTEM/STO2ET@STORET.SDC

revoke create session from storet, storet1;

2b. Update STORET.TSRUOM table.

@C:\storetw\update_TSRUOM.sql;

2c. Create STORET and STORET1 indexes if they are missing.

@C:\storetw\cr_appl_inde.sql;

3. Create the functions used by the ETL scripts.

CONNECT STORETW/STORETW@STORET.SDC

@C:\storetw\functions\etl_glob_var.sql;

@C:\storetw\functions\f_createflbrmk.sql;

@C:\storetw\functions\f_estry.sql;

@C:\storetw\functions\f_mad.sql;

@C:\storetw\functions\f_station_visited.sql;

@C:\storetw\functions\f_fieldset.sql;

@C:\storetw\functions\f_createFNAICS.sql;

@C:\storetw\functions\f_biopt.sql;

@C:\storetw\functions\f_prmv1.sql;

@c:\storetw\functions\f_char_name.sql;

4. Create FA_STATION table.

@C:\storetw\fa_statn\fa_station_table.sql;

5a. Create Characteristic tables.

@C:\storetw\char_stn\char_stn_table.sql;

@C:\storetw\char_stn\char_table.sql;

5b. Create LU_CHAR_ALIAS AND LU_CHAR_ALIAS_TYPE tables.

@C:\storetw\lu_char_alias\lu_char_alias.sql;

6. Create Drainage Basin tables.

@C:\storetw\drainagebasin\db_tables.sql;

7. Create Geographical tables (state/county).

@C:\storetw\geopa\geo_tables.sql;

8. Create Method and Datum (MAD) code tables.

@C:\storetw\mad\mad_tables.sql;

@C:\storetw\mad\stn_std_datum.sql;

9. Create Organization table.
@C:\storetw\org\org_tables.sql;
10. Create Station Types table.
@C:\storetw\statn_types\statn_types_tables.sql;
11. Create Estuary tables.
@C:\storetw\estuary\estry_tables.sql;
12. Create DI_DATE table.
@C:\storetw\di_date\di_date_table.sql;
13. Create UOM table with Unit Conversion factors.
@C:\storetw\unit_conversion.sql;
14. Create FA_REGULAR_RESULT table.
@C:\storetw\fa_regular_result\fa_regular_result_table.sql;
@C:\storetw\fa_regular_result\fa_regular_result_data1.sql;
@C:\storetw\fa_regular_result\fa_regular_result_pdl_data1.sql;
@C:\storetw\fa_regular_result\create_temp_tables.sql;
@C:\storetw\fa_regular_result\update_temp_tables.sql;
@C:\storetw\fa_regular_result\fa_regular_result_data2.sql;
15. Create FA_BIOLOGICAL_RESULT table.
@C:\storetw\fa_biological_result\fa_bio_result_table.sql;
@C:\storetw\fa_biological_result\fa_bio_result_data1.sql;
@C:\storetw\fa_biological_result\create_bio_temp_tables.sql;
@C:\storetw\fa_biological_result\update_bio_temp_tables.sql;
@C:\storetw\fa_biological_result\update_bio_temp_tables2.sql;
@C:\storetw\fa_biological_result\fa_bio_result_data2.sql;
16. Create FA_HABITAT_RESULT table.
@C:\storetw\fa_habitat_result\fa_habitat_result_table.sql;
@C:\storetw\fa_habitat_result\fa_habitat_result_data1.sql;
@C:\storetw\fa_habitat_result\create_habitat_temp_tables.sql;
@C:\storetw\fa_habitat_result\update_habitat_temp_tables.sql;
@C:\storetw\fa_habitat_result\fa_habitat_result_data2.sql;
17. Create DI_ACT_MEDIUM table.
@C:\storetw\di_act_medium\di_act_medium.sql;

18. Create result fact table indexes.
@C:\storetw\fa_regular_result\fa_regular_result_index.sql;
@C:\storetw\fa_biological_result\fa_bio_result_index.sql;
@C:\storetw\fa_habitat_result\fa_habitat_result_index.sql;
19. Create LU_CHAR_ALIAS AND LU_CHAR_ALIAS_TYPE tables.
@C:\storetw\lu_char_alias\lu_char_alias.sql;
20. Create DI_PROJECT table and the associated relationship tables.
@C:\storetw\di_project\di_project_table.sql;
@C:\storetw\di_project\project_rel_tables.sql;
21. Create the LU_STATION_ALIAS table.
@C:\storetw\lu_station_alias\lu_station_alias.sql;
22. Create the remaining dimension tables (i.e., DI_ACTIVITY_INTENT, DI_COMMUNITY_SAMPLED, DI_SUBJECT_TAXON, DI_GROUP_TYPE, DI_BIOPART, and DI_ACTIVITY_MATRIX).
@C:\storetw\di_activity_intent\di_activity_intent.sql;
@C:\storetw\di_community_sampled\di_community_sampled.sql;
@C:\storetw\di_subject_taxon\di_subject_taxon.sql;
@C:\storetw\di_group_type\di_group_type.sql;
@C:\storetw\di_biopart\di_biopart.sql;
@C:\storetw\di_activity_matrix\di_activity_matrix.sql;
23. Create the BLOB table and add BLOB IDs to the fact tables.
@C:\storetw\fa_blob\fa_blob.sql;
24. Finish building the FA_REGULAR_RESULT table.
@C:\storetw\fa_regular_result\fa_regular_result_const.sql;
@C:\storetw\fa_regular_result\fa_regular_result_drop_cols.sql;
25. Finish building the FA_BIOLOGICAL_RESULT table.
@C:\storetw\fa_biological_result\fa_bio_result_const.sql;
@C:\storetw\fa_biological_result\fa_bio_result_drop_cols.sql;
26. Finish building the FA_HABITAT_RESULT table.
@C:\storetw\fa_habitat_result\fa_habitat_result_const.sql;
@C:\storetw\fa_habitat_result\fa_habitat_result_drop_cols.sql;
27. Drop unnecessary columns from FA_STATION table.
@C:\storetw\fa_statn\fa_station_drop_cols.sql;

28. Analyze database objects and performance tune.
@C:\storetw\analyze_objects.sql;
@C:\storetw\performance_tuning.sql;
29. Delete temporary tables.
@C:\storetw\drop_temp_tables.sql;
30. Update User Defined Habitat Result columns.
@C:\storetw\fa_habitat_result\DW_user_def_hab.sql;
31. Update tables and indexes storage parameters.
@C:\storetw\gen_tblstrg.sql;
@C:\storetw\gen_idxstrg.sql;

The ETL process is now complete. Perform the remaining steps for installing the web interface.

32. Create report customization related table and materialized views.
CONNECT STORETW/STORETW@STORET.SDC
@C:\storetw\application\APP_COLUMN_NAME.sql;
@C:\storetw\application\DW_data_requests_table.sql;
@C:\storetw\materialized_views.sql;
33. Alter the file C:\storetw\application\DW_glob_var.sql to reflect the directory structure of the environment where the software is being installed. The global variables established in this package should have values identical to the values in the glob_var.sql file included with the existing STORET Web application with one exception; the file name section of the variable lv_script_path should be set to "DW_storet.js". Update threshold values for batch processing and national projects. Provide timings for scheduled jobs, STORET email address, SMTP Host, and SMTP Port information.
34. Create the global variables package as storetw.
@C:\storetw\application\DW_glob_var.sql;
35. Compile Java procedures used by the web application procedures.
@C:\storetw\application\procedures\DW_exec_os.java;
@C:\storetw\application\procedures\DW_blob_handler.java;
36. Create the web application procedures as storetw.
@C:\storetw\application\procedures\DW_mail_pkg.sql;
@C:\storetw\application\procedures\DW_record_data_request.sql;
@C:\storetw\application\procedures\DW_huc_popup.sql;
@C:\storetw\application\procedures\DW_counties_popup.sql;
@C:\storetw\application\procedures\DW_top_of_page.sql;

```
@C:\storetw\application\procedures\DW_bottom_of_page.sql;
@C:\storetw\application\procedures\DW_display_calendar.sql;
@C:\storetw\application\procedures\DW_geo_select.sql;
@C:\storetw\application\procedures\DW_date_select.sql;
@C:\storetw\application\procedures\DW_char_select.sql;
@C:\storetw\application\procedures\DW_project_select.sql;
@C:\storetw\application\procedures\DW_station_select.sql;
@C:\storetw\application\procedures\DW_medium_select.sql;
@C:\storetw\application\procedures\DW_community_select.sql;
@C:\storetw\application\procedures\DW_selection_criteria.sql;
@C:\storetw\application\procedures\DW_selection_criteria_station.sql;
@C:\storetw\application\procedures\DW_station_count.sql;
@C:\storetw\application\procedures\DW_station_download_custom.sql;
@C:\storetw\application\procedures\DW_station_hub_custom.sql;
@C:\storetw\application\procedures\DW_proj_popup.sql;
@C:\storetw\application\procedures\DW_char_alias_popup.sql;
@C:\storetw\application\procedures\DW_station_popup.sql;
@C:\storetw\application\procedures\DW_extref_popup.sql;
@C:\storetw\application\procedures\DW_result_criteria_geo.sql;

@C:\storetw\application\procedures\DW_batch_download_pickup.sql;
@C:\storetw\application\procedures\DW_process_pendingbatch_imm.sql;
@C:\storetw\application\procedures\DW_monthly_stats.sql;
@C:\storetw\application\DW_schedule_batch_jobs.sql;
```

37. Copy the application's JavaScript library file into the scripts directory indicated in the global variables script (see step 33).
--C:\storetw\application\scripts\DW_storet.js
38. Copy the application's Help and the associated image files into the Hyper-Text Markup Language (HTML) documents directory indicated in the global variables script (see step 33).
--C:\storetw\application\doc\DW_storet_help.html
--C:\storetw\application\doc\lat_long_ex.gif
39. Alter the file C:\storetw\application\DW_PERMISSIONS.sql to reflect the environment where the software is being installed. This script includes JAVA permissions that require a username/password with DBA privileges. The script must also be modified to include the correct directory location of the GZIP file compression utility and the location of the user reports directory (established in DW_glob_var).
40. Grant appropriate privileges and create required synonyms.
@C:\storetw\application\DW_GRANTS.sql;
CONNECT STORETWEB/STORETWEB@STORET.SDC
@C:\storetw\application\DW_SYNONYMS.sql;
CONNECT SYSTEM/STO2ET@STORET.SDC
@C:\storetw\application\DW_PERMISSIONS.sql;
DISCONNECT

APPENDIX A

Technical Specifications

STORET Central Warehouse Specification**SIR:** 1633**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Batch_Download_Pickup**Web Page Name:** Batch Data Requests**Processing Overview/Description:**

This is a Web page that lists batch data requests. It includes Request ID, Filename and other related information. The filename is a hyper link to download the file.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
DW_DATA_REQUESTS	REQUEST_ID	N
	FILENAME	Y
	REQUEST_STATUS	N
	REQUEST_MODE	Y
	DATETIME	Y

Links From:

None.

Input Parameters:

Natural Language	Parameter
Number of Days. Used to provide the list of Batch jobs recorded in the past P_DAYS. A default value of 30 is used.	P_DAYS

Links To:

Data files listed on the page have hyperlinks that allow users to download the appropriate data file.

Output Parameters:

None.

Internal Procedure Events:**Onload**

- C Query the list of Batch data requests that were submitted in the past number of days defined by P_DAYS input parameter.
- C Check for existence of the file on the file system.
- C Present the list in a tabular format with hyperlinks to the filename. The hyperlinks should download the data file when clicked.

Images:

None.

Business Rules:

- C Check for the file before presenting on the page.

Error Handling:

None

STORET Central Warehouse Specification**SIR:** 1502, 1532, 1563**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Bio_Result_Criteria_Geo**Web Page Name:** Biological Results by Geographic Location**Processing Overview/Description:**

The Biological Results by Geographic Location page is the first Biological Result search page of the STORET Central Warehouse and provides four major search areas: Geographic Location, Date, Activity Intent and Community Sampled, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. In addition, the Geographic Location dimension is divided into three sub-dimensions: State/County, Latitude/Longitude, and Hydrologic Unit Code (HUC). The user is able to select one of these three location sub-dimensions per Result query. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
State (DI_GEO_STATE)	STATE_NAME	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Results by Geographic Location

Input Parameters:

These parameters are passed from the three Popup windows (DW_County_Popup, DW_HUC_Popup, and DW_Char_Alias_Popup) back to this procedure.

Natural Language	Parameter
The names of the selected County(s) in a comma separated string. By default this value is 'ALL'.	AS_COUNTY
The codes of the selected County(s) in a comma separated string. By default this value is 'ALL'.	V_COUNTY_CODE
The Hydrologic Unit Code value. By default this value is 'ALL'.	AS_HUC
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_County_Popup	STORET: Select Counties	Look Up
DW_HUC_Popup	STORET: Select a Hydrologic Unit Code (HUC)	Look Up
DW_Char_Alias_Popup	STORET: Characteristic Search Results	Search
DW_Result_Count	Result Search Summary	Continue

Output Parameters:

Natural Language	Parameter
Identifies the geographic location parameter being used for the search. By default this value is 'StateCounty'.	GEOGRAPHIC
The name of the selected State. By default this value is 'ALL'.	AS_STATE

Natural Language	Parameter
The names of the selected County(s) in a comma separated string. By default this value is 'ALL'.	AS_COUNTY
The codes of the selected County(s) in a comma separated string. By default this value is 'ALL'.	V_COUNTY_CODE
The Northern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 90.	MAX_LAT_DD
The Western Limit of a Latitude/Longitude query in decimal degrees. By default this value is 180.	MIN_LONG_DD
The Eastern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 0.	MAX_LONG_DD
The Southern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 0.	MIN_LAT_DD
The direction of the Northern Limit. By default this value is N.	DIR_MAXLAT
The direction of the Southern Limit. By default this value is N.	DIR_MINLAT
The direction of the Eastern Limit. By default this value is W.	DIR_MAXLONG
The direction of the Western Limit. By default this value is W.	DIR_MINLONG
The Hydrologic Unit Code value. By default this value is 'ALL'.	AS_HUC
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1

Natural Language	Parameter
The month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_MON2
The day of the month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_YYYY2
The month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_MON3
The day of the month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_YYYY3

Natural Language	Parameter
The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags(). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is ‘DUMMY’.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE

Natural Language	Parameter
A Pl/Sql table of selected Activity Intent (Intent Key List).	D_INTENT_LIST
A Pl/Sql table of selected Community Sampled (Community Sampled Key List).	D_COMMUNITY_LIST

Internal Procedure Events:

Onload

- C Populate the State Name list box with State Names organized alphabetically by country (with the U. S. first followed by Mexico and Canada).
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Populate and format the Activity Intent list box with Activity Intent names.
- C Populate and format the Community Sampled list box with Community Sampled names.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Geographic Location Section

- C State/County 'Lookup' onclick: Display a pop-up window showing the available counties for the state currently selected from the drop-down list. Populate the County Name(s) text area with the Counties that the user selects from the pop-up window.
- C HUC 'Lookup' onclick: Display a pop-up window showing all available HUC codes and their corresponding names. Populate the Cataloging Unit text box with the HUC code that the user selects from the pop-up window.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search

string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.

- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user selects 'All' State/Counties, all result records are included in the search.
- C If the user selects 'All' HUCs, all result records are included in the search.
- C If the user selects default latitude/longitude values (i.e., N=90, S=0, E=0, W=180), all result records are included in the search.

- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To Date = current date), all result records are included in the search.
- C Selected Community Sampled are included in the search only if Intent is 'Select All' or 'Taxon Abundance'.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C The user will not be allowed to proceed to the next page if a non-numeric character is entered in the Latitude/Longitude fields or if the entry is outside the Latitude/Longitude permitted value range.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- An alert is displayed if the user attempts to perform a County look-up before selecting a State.
- The county field is reset to 'All' if the selected State is changed.
- The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g. Jan 1, 2003 - Jan 1, 1900).

Second half of page.

The screenshot shows a web browser window with a toolbar at the top. The main content area is divided into two sections: "Activity Intent and Community Sampled" and "Characteristic".

Activity Intent and Community Sampled

On the left, under "Select one or more Activity Intent", there is a list box titled "ACTIVITY INTENT" with the following options: "Select All", "Individual", "Taxon Abundance", and "Tissue". "Select All" is currently selected.

On the right, under "If Intent is Taxon Abundance, select one or more Community Sampled", there is a list box titled "COMMUNITY SAMPLED" with the following options: "Select All", "Aquatic Vegetation", "Bacteria/Virus", "Benthic Macroinvertebrates", "Birds", "Corals", and "Fish/Nekton". "Select All" is currently selected.

Characteristic

Below the first section, there is a section titled "Characteristic" with the instruction: "Use the Characteristic Search to create a list of up to 50 Characteristics".

Inside this section, there is a "Characteristic Search" form. It includes a text input field for the search term, a "Search" button, and a "Search By" dropdown menu currently set to "CHARACTERISTIC NAME". There is also a checkbox labeled "Hide Taxonomic Names" which is checked.

Below the search form is a large text area labeled "Characteristic Name" for displaying results. At the bottom of this section are two buttons: "Clear Selected" and "Clear All".

At the very bottom of the page, there are two buttons: "Continue" and "Clear Form".

On the right side of the page, there is a "Help" link.

At the bottom of the page, there is a footer with the following text:

STORET Central Warehouse Specification**SIR:** 1502, 1532, 1563**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Bio_Result_Criteria_Project**Web Page Name:** Biological Results by Project**Processing Overview/Description:**

The Biological Results by Project page is the third Biological Result search page of the STORET Central Warehouse and provides four major search areas: Organization/Project, Date, Activity Intent and Community Sampled, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. The user is able to select a single Project from a single Organization. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Organization (DI_ORG)	ORGANIZATION_NAME	Y
	ORGANIZATION_ID	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Results by Project

Input Parameters:

These parameters are passed from the two Popup windows (DW_Project_Popup and DW_Char_Alias_Popup) back to this procedure.

Natural Language	Parameter
The name of the selected Project. By default this value is 'Select a Project'.	AS_PROJ
The key of the selected Project. By default this value is 0.	D_PROJ_LIST
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_Project_Popup	STORET: Select Project	Look Up
DW_Char_Alias_Popup	STORET: Characteristic Search Results	Search
DW_Result_Count	Result Search Summary	Continue

Output Parameters:

Natural Language	Parameter
The name of the selected Project. By default this value is 'Select a Project'.	AS_PROJ
The key of the selected Project. By default this value is 0.	D_PROJ_LIST
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1

Natural Language	Parameter
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1
The month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_MON2
The day of the month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_YYYY2
The month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_MON3

Natural Language	Parameter
The day of the month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_YYYY3
The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is ‘DUMMY’.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER

Natural Language	Parameter
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE
A Pl/Sql table of selected Activity Intent (Intent Key List).	D_INTENT_LIST
A Pl/Sql table of selected Community Sampled (Community Sampled Key List).	D_COMMUNITY_LIST

Internal Procedure Events:

Onload

- C Populate and format the Organization list box with Organization IDs and Names organized by Organization ID.
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Populate and format the Activity Intent list box with Activity Intent names.
- C Populate and format the Community Sampled list box with Community Sampled names.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Organization/Project Section

- C Project 'Lookup' onclick: Display a pop-up window showing the available Projects for the Organization currently selected from the drop-down list. Populate the Project Name textbox with the Project that the user selects from the pop-up window and populate the hidden variable D_PROJ_LIST with the corresponding key.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.
- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.

- C If the user has selected an Organization but does not select a Project, data for the selected Organization is retrieved for the report.
- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To = current date), all result records are included in the search.
- C Selected Community Sampled are included in the search only if Intent is 'Select All' or 'Taxon Abundance'.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- An alert is displayed if the user attempts to perform a Project look-up before selecting an Organization.
- The Project field is reset to 'Select a Project' if the selected Organization is changed.
- The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g., Jan 1, 2003 - Jan 1, 1900).

Biological Results by Project

Project

Step 1: Select a Single Organization from the List

ORG ID	ORGANIZATION NAME
Select an Organization	

Step 2: Select a Single Project by Clicking "Look Up"

Select a Project	<input type="button" value="Look Up"/>
------------------	--

Date

Specify Activity Start Date range(s)

Date Range 1:	JAN	1	1900	To	SEP	3	2003
Date Range 2:	---	---	----	To	---	---	----
Date Range 3:	---	---	----	To	---	---	----
Date Range 4:	---	---	----	To	---	---	----

Activity Intent and Community Sampled

Select one or more Activity Intent	If Intent is Taxon Abundance, select one or more Community Sampled
ACTIVITY INTENT	COMMUNITY SAMPLED
Select All	Select All
Individual	Aquatic Vegetation
Taxon Abundance	Bacteria/Virus
Tissue	Benthic Macroinvertebrates
	Birds
	Fish/Nekton
	Mammals

Second half of page.

The screenshot shows a web application interface with a browser window. The title bar of the browser window is "Activity Intent and Community Sampled". The page content is divided into two main sections.

Activity Intent and Community Sampled

This section contains two side-by-side selection boxes. The left box is titled "Select one or more Activity Intent" and has a dropdown menu labeled "ACTIVITY INTENT" with the following options: "Select All", "Individual", "Taxon Abundance", and "Tissue". The right box is titled "If Intent is Taxon Abundance, select one or more Community Sampled" and has a dropdown menu labeled "COMMUNITY SAMPLED" with the following options: "Select All", "Aquatic Vegetation", "Bacteria/Virus", "Benthic Macroinvertebrates", "Birds", "Corals", and "Fish/Nekton".

Characteristic

Below the first section is a section titled "Characteristic". It contains a text box with the instruction "Use the Characteristic Search to create a list of up to 50 Characteristics". Below this is a "Characteristic Search" form. The form has a text input field for "Characteristic Search", a "Search By" dropdown menu set to "CHARACTERISTIC NAME", a "Search" button, and a checkbox labeled "Hide Taxonomic Names" which is checked. Below the search fields is a large text area labeled "Characteristic Name". At the bottom of the form are two buttons: "Clear Selected" and "Clear All". Below the form are two more buttons: "Continue" and "Clear Form".

At the bottom of the page, there is a horizontal line with the following links: [EPA Home](#), [Privacy and Security Notice](#), and [Contact Us](#). Below these links is the text "Last updated on November 26, 2003" and the URL "URL: http://oasdev.sdc-moses.com/storet/srpp/DW_bio_resultcriteria_project". A "Help" link is also visible on the right side of the page.

STORET Central Warehouse Specification**SIR:** 1502, 1532, 1563**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Bio_Result_Criteria_Station**Web Page Name:** Biological Results by Station**Processing Overview/Description:**

The Biological Results by Station page is the second Biological Result search page of the STORET Central Warehouse and provides four search areas: Organization/Station, Date, Activity Intent and Community Sampled, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. The user is able to select Stations from multiple Organizations, but is limited to selecting a maximum of 100 Stations per query. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Organization (DI_ORG)	ORGANIZATION_NAME	Y
	ORGANIZATION_ID	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text

The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4

Natural Language	Parameter
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is ‘DUMMY’.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE
A Pl/Sql table of selected Activity Intent (Intent Key List).	D_INTENT_LIST
A Pl/Sql table of selected Community Sampled (Community Sampled Key List).	D_COMMUNITY_LIST

Internal Procedure Events:**Onload**

- C Populate and format the Organization list box with Organization IDs and Names organized by Organization ID.
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Populate and format the Activity Intent list box with Activity Intent names.
- C Populate and format the Community Sampled list box with Community Sampled names.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Station Section

- C 'Look Up' onclick: Display a popup window showing the Station Alias Types that match the Organization selected by the user. If the user has not selected an Organization, display an alert message prompting them to do so. Populate the Station Alias Type display field with the Station Alias the user selects from the pop-up window.
- C 'Search Stations' onclick: Display a pop-up window showing the Stations that match the search string, search type, Station Alias Type and Organization entered by the user. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Station listbox with the Stations the user selects from the pop-up window. No more than 100 Stations can be added to the stations selected list.
- C 'Clear Selected' onclick: All selected Stations are removed from the stations selected list.
- C 'Clear All' onclick: All Stations are removed from the stations selected list.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the

user selects from the pop-up window. No more than 50 Characteristics can be added to the characteristics selected list.

- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristics selected list.
- C 'Clear All' onclick: All characteristics are removed from the characteristics selected list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user has selected an Organization but does not select any Stations, data for the selected Organization is retrieved for the report.
- C Stations can not be added to the Selected Stations list more than once.
- C If the user selects 'Search by Station Alias Type' but does not change the selected Station Alias Type (i.e., default of 'STANDARD'), then Stations will be searched by ID.
- C The user may add no more than 100 Stations to the Selected Stations list. The attempted addition of Stations in excess of this limit is blocked and an alert is displayed.

- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To = current date), all result records are included in the search.
- C Selected Community Sampled are included in the search only if Intent is 'Select All' or 'Taxon Abundance'.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- C An alert is displayed if the user attempts to perform a Station search before entering a search string.
- C An alert is displayed if the user attempts to perform a Station search before selecting an Organization.
- C An alert is displayed if the user attempts to perform a Station Alias Type lookup before selecting an Organization.
- C The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g., Jan 1, 2003 - Jan 1, 1900).

Page Print:

First half of page.

The screenshot shows the EPA STORET web application in Microsoft Internet Explorer. The browser window title is "EPA > STORET > Biological Results by Station - Microsoft Internet Explorer". The address bar shows the URL: http://oasdev.sdc-moses.com/storet/srpp/DW_bio_resultcriteria_station. The page features the EPA logo and the text "U.S. Environmental Protection Agency". Below this is the "STORET" header with links for "Recent Additions", "Contact Us", and "Print Version". A search bar with a "GO" button is also present. The main content area is titled "Biological Results by Station" and includes a "Station" section. This section contains instructions: "Select an Organization and a Search Type, then enter a Search String and click 'Search Stations'". It features a dropdown menu for "ORG ID" (currently showing "Select an Organization"), a "Search Type" section with radio buttons for "Search by Station ID" (selected), "Search by Station Name", and "Search by Station Alias". Below the radio buttons is a "Select Station Alias Type" field with "STANDARD" selected and a "Look Up" button. A "Search String" input field and a "Search Stations" button are also present. At the bottom of the form are "Clear Selected" and "Clear All" buttons. The table below the form has columns for "Org ID", "Station ID", "Alias Type", "Station Alias", and "Station Name", but it is currently empty.

Second half of page.

The screenshot shows a web application interface with two main sections. The top section, titled "Activity Intent and Community Sampled", contains two side-by-side dropdown menus. The left menu, labeled "Select one or more Activity Intent", has a title "ACTIVITY INTENT" and lists "Select All", "Individual", "Taxon Abundance", and "Tissue". The right menu, labeled "If Intent is Taxon Abundance, select one or more Community Sampled", has a title "COMMUNITY SAMPLED" and lists "Select All", "Aquatic Vegetation", "Bacteria/Virus", "Benthic Macroinvertebrates", "Birds", "Corals", and "Fish/Nekton".

The bottom section, titled "Characteristic", contains a form for "Characteristic Search". It includes a "Search By" dropdown menu set to "CHARACTERISTIC NAME", a "Search" button, and a checkbox labeled "Hide Taxonomic Names" which is checked. Below the search area is a large text box labeled "Characteristic Name". At the bottom of the form are buttons for "Clear Selected", "Clear All", "Continue", and "Clear Form".

At the bottom of the page, there is a horizontal line with links: "EPA Home | Privacy and Security Notice | Contact Us". Below this line, it says "Last updated on November 26, 2003" and "URL: http://oasdev.sdc-moses.com/storet/srpp/DW_bio_resultcriteria_station". A "Help" link is also visible on the right side of the page.

STORET Central Warehouse Specification**SIR:** 1559**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Blob_Download**Web Page Name:** Download Document/Graphic**Processing Overview/Description:**

The DW_Blob_Download procedure processes Document/Graphic Uniform Resource Locators (URLs) referenced in Central Warehouse reports. The Document/Graphic that corresponds to the requested identifier is retrieved from the database and written to a file for download. A link to this file is then presented to the requesting user.

Tables:

(Display Fields are listed in the order they are displayed)

STORET Central Warehouse Specification

SIR: 1437, 1595

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Char_Alias_Popup

Web Page Name: STORET: Characteristic Search Results

Processing Overview/Description:

The Characteristic Search Results pop-up is called by all Result Search Criteria pages and the Station Search Criteria page. It is used to display a list of available Characteristics that conform to the user's search string. The user can search by the standard STORET name (STORET DEFAULT), or by Characteristic Alias such as CAS Number (CAS NUMBER) and STORET Parameter Code (STORET PARM CODE). If the user has chosen to search by Characteristic Alias, the pop-up window will display both the Characteristic Alias name and standard STORET name. The user is able to select one or more Characteristics from this list. The names and codes of the selected Characteristics are passed to the calling Result Search Criteria page where the appropriate fields are populated with the standard STORET names and corresponding codes.

Tables:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Characteristic (DI_CHARACTERISTIC)	DISPLAY_NAME	Y
	SEARCH_NAME	N
	PK_ISN	N
	TYPE_CODE	N
Characteristic Alias (LU_CHAR_ALIAS)	CHAR_ALIAS	Y

DW_Hab_Result_Criteria_Station	Habitat Results by Station	<Select>
DW_Hab_Result_Criteria_Project	Habitat Results by Project	<Select>

Output Parameters:

Natural Language	Parameter
A PL/SQL table of selected Characteristics (Characteristic ID List).	CHAR_LIST
The names of the selected Characteristic(s) in a string separated by a break.	V_CHAR_NAMES

Internal Procedure Events:**Onload**

- C Populate the select list with the Characteristics that conform to the Characteristic Search Criteria.

Form Level

- C 'Select' onclick: Populate the Selected Characteristics list on the calling Selection Criteria page with the Characteristic names and hidden Ids that the user selects from this pop-up window. If Characteristics were previously added, insert the new Characteristics at the end of the existing Selected Characteristics list.

- C 'Cancel' onclick: Close this pop-up window and return focus to the calling Result Selection Criteria page. Do not alter the value of the Selected Characteristics list.

Images:

None.

Business Rules:

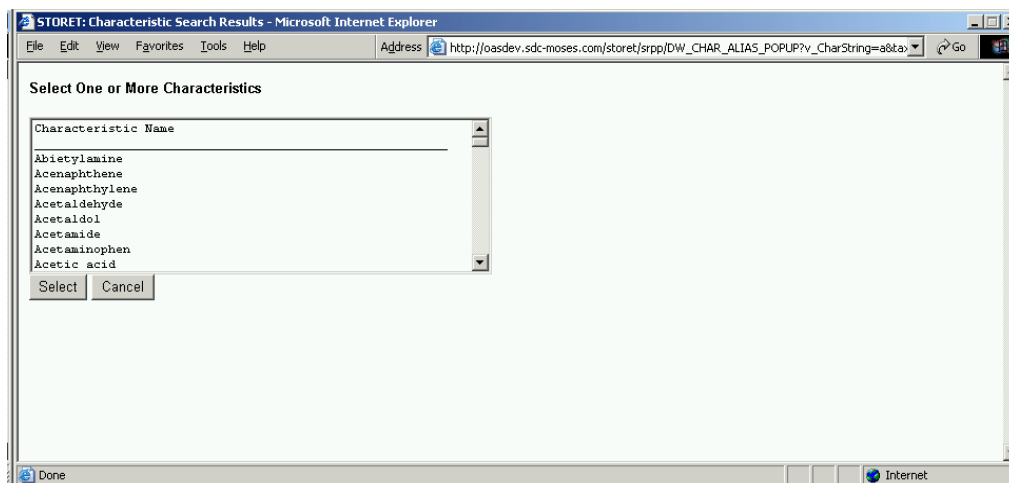

- C Only display Taxonomic Characteristics if the user has requested to see them.
- C If Taxonomic Characteristics are requested, only display those that have recorded result data.
- C Allow multiple Characteristics to be selected.
- C If a Characteristic is selected multiple times, include it only once on the calling Result Selection Criteria page.
- C Do not show the User Defined Habitat Assessment Characteristic as a selection option.

Error Handling:

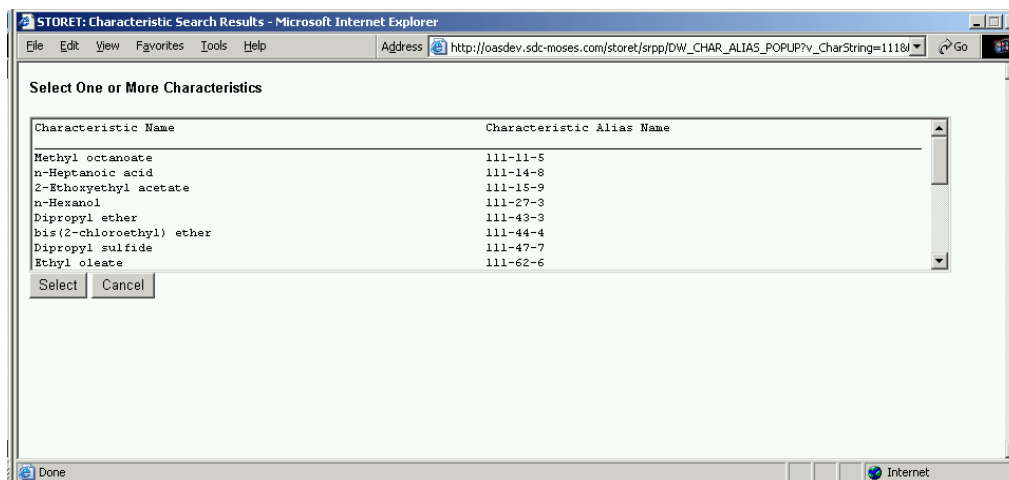

- C A standard Error Page should be displayed when this page does not load upon request.
- C Only valid Characteristic Codes are returned to the Result Selection Criteria page.

STORET Central Warehouse Specification

SIR: 1503, 1563

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Hab_Result_Criteria_GEO

Web Page Name: Habitat Results by Geographic Location

Processing Overview/Description:

The Habitat Results by Geographic Location page is the first Habitat Result search page of the STORET Central Warehouse and provides three major search areas: Geographic Location, Date, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. In addition, the Geographic Location dimension is divided into three sub-dimensions: State/County, Latitude/Longitude, and Hydrologic Unit Code (HUC). The user is able to select one of these three location sub-dimension per Result query. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
State (DI_GEO_STATE)	STATE_NAME	Y
	PK_ISN	N

Output Parameters:

Natural Language	Parameter
Identifies the geographic location parameter being used for the search. By default this value is 'StateCounty'.	GEOGRAPHIC
The name of the selected State. By default this value is 'ALL'.	AS_STATE

Natural Language	Parameter
The names of the selected County(s) in a comma separated string. By default this value is 'ALL'.	AS_COUNTY
The codes of the selected County(s) in a comma separated string. By default this value is 'ALL'.	V_COUNTY_CODE
The Northern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 90.	MAX_LAT_DD
The Western Limit of a Latitude/Longitude query in decimal degrees. By default this value is 180.	MIN_LONG_DD
The Eastern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 0.	MAX_LONG_DD
The Southern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 0.	MIN_LAT_DD
The direction of the Northern Limit. By default this value is N.	DIR_MAXLAT
The direction of the Southern Limit. By default this value is N.	DIR_MINLAT
The direction of the Eastern Limit. By default this value is W.	DIR_MAXLONG
The direction of the Western Limit. By default this value is W.	DIR_MINLONG
The Hydrologic Unit Code value. By default this value is 'ALL'.	AS_HUC
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1

Natural Language	Parameter
The month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_MON2
The day of the month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_YYYY2
The month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_MON3
The day of the month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_YYYY3

Natural Language	Parameter
The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags(). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is ‘DUMMY’.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE

Internal Procedure Events:**Onload**

- C Populate the State Name list box with State Names organized alphabetically by country (with the U. S. first followed by Mexico and Canada).
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Geographic Location Section

- C State/County 'Lookup' onclick: Display a pop-up window showing the available counties for the state currently selected from the drop-down list. Populate the County Name(s) textarea with the Counties that the user selects from the pop-up window.
- C HUC 'Lookup' onclick: Display a pop-up window showing all available HUC codes and their corresponding names. Populate the Cataloging Unit text box with the HUC code that the user selects from the pop-up window.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.
- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user selects 'All' State/Counties, all result records are included in the search.
- C If the user selects 'All' HUCs, all result records are included in the search.
- C If the user selects default latitude/longitude values (i.e., N=90, S=0, E=0, W=180), all result records are included in the search.
- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To Date = current date), all result records are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.

- C The user will not be allowed to proceed to the next page if a non-numeric character is entered in the latitude/longitude fields or if the entry is outside the Latitude/Longitude permitted value range.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- An alert is displayed if the user attempts to perform a County look-up before selecting a State.
- The county field is reset to 'All' if the selected State is changed.
- The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g. Jan 1, 2003 - Jan 1, 1900).

Page Print:

First half of page.

The screenshot shows the STORET web application interface. At the top, there is a navigation bar with the U.S. Environmental Protection Agency logo and the STORET title. Below this, there are links for Recent Additions, Contact Us, and Print Version, along with a search bar and a GO button. The main heading is "Habitat Results by Geographic Location".

Geographic Location

Select a single type of location search that you wish to perform (state/county, latitude/longitude, or HUC). Then enter the corresponding search criteria.

<input checked="" type="radio"/> State/County	State Name ALL	County Name ALL	Look Up
<input type="radio"/> Latitude/Longitude (in decimal degrees)	West Limit 180 W	North Limit 90 N East Limit 0 W South Limit 0 N	
<input type="radio"/> Drainage Basin/HUC	Cataloging Unit ALL	Look Up	

Date

Specify Activity Start Date range(s)

Date Range 1:	JAN	1	1900	To	NOV	20	2003
Date Range 2:	---	---	---	To	---	---	---
Date Range 3:	---	---	---	To	---	---	---
Date Range 4:	---	---	---	To	---	---	---

Characteristic

Second half of page.

The screenshot shows a web browser window with a toolbar at the top. The main content area is divided into two sections. The first section, titled "Specify Activity Start Date range(s)", contains four rows of date range selectors. The first row is populated with "JAN", "1", "1900" for the start date and "NOV", "20", "2003" for the end date. The other three rows are empty. The second section, titled "Characteristic", contains a search form. It has a "Characteristic Search" input field, a "Search By" dropdown menu set to "CHARACTERISTIC NAME", a "Search" button, and a checkbox labeled "Hide Taxonomic Names" which is checked. Below the search form is a large empty box labeled "Characteristic Name". At the bottom of the search section are "Clear Selected" and "Clear All" buttons. Below the search section are "Continue" and "Clear Form" buttons. A "Help" link is located to the right of the search section. At the bottom of the page, there is a footer with links to "EPA Home", "Privacy and Security Notice", and "Contact Us". Below these links is the text "Last updated on November 26, 2003" and the URL "http://oasdev.sdc-moses.com/storet/srdev/DW_hab_resultcriteria_geo". The Windows taskbar at the bottom shows the Start button, several open applications (Inbox - Microso..., Exploring - C2.0.1, WordPerfect 9..., EPA > STO..., Mission Oriente...), and the system clock showing "Thursday, November 20, 2003".

Specify Activity Start Date range(s)

STORET Central Warehouse Specification**SIR:** 1503, 1563**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Hab_Result_Criteria_Project**Web Page Name:** Habitat Results by Project**Processing Overview/Description:**

The Habitat Results by Project page is the third Habitat Result search page of the STORET Central Warehouse and provides three major search areas: Organization/Project, Date, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. The user is able to select a single Project from a single Organization. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Organization (DI_ORG)	ORGANIZATION_NAME	Y
	ORGANIZATION_ID	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Habitat Results by Project

Input Parameters:

These parameters are passed from the two Popup windows (DW_Project_Popup and DW_Char_Alias_Popup) windows back to this procedure.

Natural Language	Parameter
The name of the selected Project. By default this value is 'Select a Project'.	AS_PROJ
The key of the selected Project. By default this value is 0.	D_PROJ_LIST
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_Project_Popup	STORET: Select Project	Look Up
DW_Char_Alias_Popup	STORET: Characteristic Search Results	Search
DW_Result_Count	Result Search Summary	Continue

Output Parameters:

Natural Language	Parameter
The name of the selected Project. By default this value is 'Select a Project'.	AS_PROJ
The key of the selected Project. By default this value is 0.	D_PROJ_LIST
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1

Natural Language	Parameter
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1
The month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_MON2
The day of the month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_YYYY2
The month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_MON3

Natural Language	Parameter
The day of the month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_YYYY3
The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is ‘DUMMY’.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER

Natural Language	Parameter
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE

Internal Procedure Events:

Onload

- C Populate the Organization list box with Organization IDs and Names organized by Organization ID.
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Organization/Project Section

- C Project 'Lookup' onclick: Display a pop-up window showing the available Projects for the Organization currently selected from the drop-down list. Populate the Project Name textbox with the Project that the user selects from the pop-up window and populate the hidden variable D_PROJ_LIST with the corresponding key.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.

- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user has selected an Organization but does not select a Project, data for the selected Organization is retrieved for the report.
- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To = current date), all result records are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.

- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- C An alert is displayed if the user attempts to perform a Project look-up before selecting an Organization.
- C The Project field is reset to 'Select a Project' if the selected Organization is changed.
- C The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g., Jan 1, 2003 - Jan 1, 1900).

The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4

Natural Language	Parameter
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is 'ON'.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE

Internal Procedure Events:

Onload

- C Populate the Organization list box with Organization IDs and Names organized by Organization ID.
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Station Section

- C 'Look Up' onclick: Display a popup window showing the Station Alias Types that match the Organization selected by the user. If the user has not selected an Organization, display an alert message prompting them to do so. Populate the Station Alias Type display field with the Station Alias Type the user selects from the pop-up window.

- C 'Search Stations' onclick: Display a pop-up window showing the Stations that match the search string, search type, Station Alias Type, and Organization entered by the user. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Station listbox with the Stations the user selects from the pop-up window. No more than 100 Stations can be added to the Selected Stations list.
- C 'Clear Selected' onclick: All selected Stations are removed from the characteristic select list.
- C 'Clear All' onclick: All Stations are removed from the characteristic select list.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.
- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user has selected an Organization but does not select any Stations, data for the selected Organization is retrieved for the report.
- C Stations can not be added to the Selected Stations list more than once.
- C If the user selects 'Search by Station Alias Type' but does not change the selected Station Alias Type (i.e., default of 'STANDARD'), then Stations will be searched by ID.
- C The user may add no more than 100 Stations to the Selected Stations list. The attempted addition of Stations in excess of this limit is blocked and an alert is displayed.
- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To = current date), all result records are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- C An alert is displayed if the user attempts to perform a Station search before entering a search string.
- C An alert is displayed if the user attempts to perform a Station search before selecting an Organization.
- C An alert is displayed if the user attempts to perform a Station Alias Type lookup before selecting an Organization.
- C The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g., Jan 1, 2003 - Jan 1, 1900).

Page Print:

First half of page.

The screenshot shows a web browser window displaying the STORET application. The header includes the U.S. Environmental Protection Agency logo and the STORET title. A navigation bar contains links for Recent Additions, Contact Us, Print Version, and a search bar. Below the navigation bar, the breadcrumb trail reads: EPA Home > Water > Wetlands, Oceans, & Watersheds > Monitoring and Assessing Water Quality > STORET > Data Warehouse.

The main section is titled "Habitat Results by Station". Below this title, the "Station" section contains a form with the following elements:

- A instruction: "Select an Organization and a Search Type, then enter a Search String and click 'Search Stations'."
- A table with two columns: "ORG ID" and "ORGANIZATION NAME". The first row shows "Select an Organization" in the "ORG ID" column.
- A "Search Type" section with three radio buttons: "Search by Station ID" (selected), "Search by Station Name", and "Search by Station Alias".
- A "Select Station Alias Type" dropdown menu set to "STANDARD" and a "Look Up" button.
- A "Search String" input field.
- A "Search Stations" button.
- A table with five columns: "Org ID", "Station ID", "Alias Type", "Station Alias", and "Station Name". The table is currently empty.
- "Clear Selected" and "Clear All" buttons at the bottom of the table.

The "Date" section is located below the "Station" section and is currently empty.

Second half of page.

The screenshot shows a web browser window with a toolbar at the top. The main content area is divided into two sections: "Date" and "Characteristic".

Date Section: Titled "Specify Activity Start Date range(s)", it contains four rows of date range selectors. "Date Range 1" is set from JAN 1 1900 to NOV 20 2003. The other three ranges (2, 3, and 4) are currently empty, each consisting of a "To" date and two empty month/year/day dropdowns.

Characteristic Section: Titled "Use the Characteristic Search to create a list of up to 50 Characteristics", it includes a "Characteristic Search" input field, a "Search By" dropdown menu set to "CHARACTERISTIC NAME", a "Search" button, and a checked checkbox for "Hide Taxonomic Names". Below these is a large empty box labeled "Characteristic Name". At the bottom of this section are "Clear Selected" and "Clear All" buttons. Further down are "Continue" and "Clear Form" buttons.

At the bottom of the page, there is a horizontal line followed by links: [EPA Home](#) | [Privacy and Security Notice](#) | [Contact Us](#). Below this, it states "Last updated on November 26, 2003" and provides a URL: http://oasdev.sdc-moses.com/storet/srdev/DW_hab_resultcriteria_station. A "Help" link is also visible on the right side of the page.

STORET Central Warehouse Specification

SIR: 1366

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_HUC_Popup

Web Page Name: STORET: Select a Hydrologic Unit Code (HUC)

Processing Overview/Description:

The Select a Hydrologic Unit Code (HUC) page is called by the Station Search Criteria page and the Results By Geographic Location pages, and is used to display a list of all available Hydrologic Unit Names and their associated codes in a pop-up window. The user may select one Hydrologic Unit from this list. The code of the selected Hydrologic Unit is passed to the calling page where the appropriate field is populated.

Tables:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
HUC Code (DI_DB_CAT)	HYDROLOGIC_UNIT_CODE	Y
	HYDROLOGIC_UNIT_NAME	Y

Note: Although this web page is initially generated from the DI_DB_CAT table, the HUC list is static and must be manually refreshed if changes are made to that table.

DW_Bio_Results_Criteria_Geo	Biological Results by Geographic Location	<Look Up>
DW_Hab_Results_Criteria_Geo	Habitat Results by Geographic Location	<Look Up>

Output Parameters:

Natural Language	Parameter
The Hydrologic Unit Code value.	AS_HUC

Internal Procedure Events:

- C 'Select' onclick: Populate the Cataloging Unit text box on the calling page with the HUC code that the user selects from this pop-up window.
- C 'Cancel' onclick: Close this pop-up window and return focus to the calling page. Do not alter the value of the Cataloging Unit text box.

Images:

None.

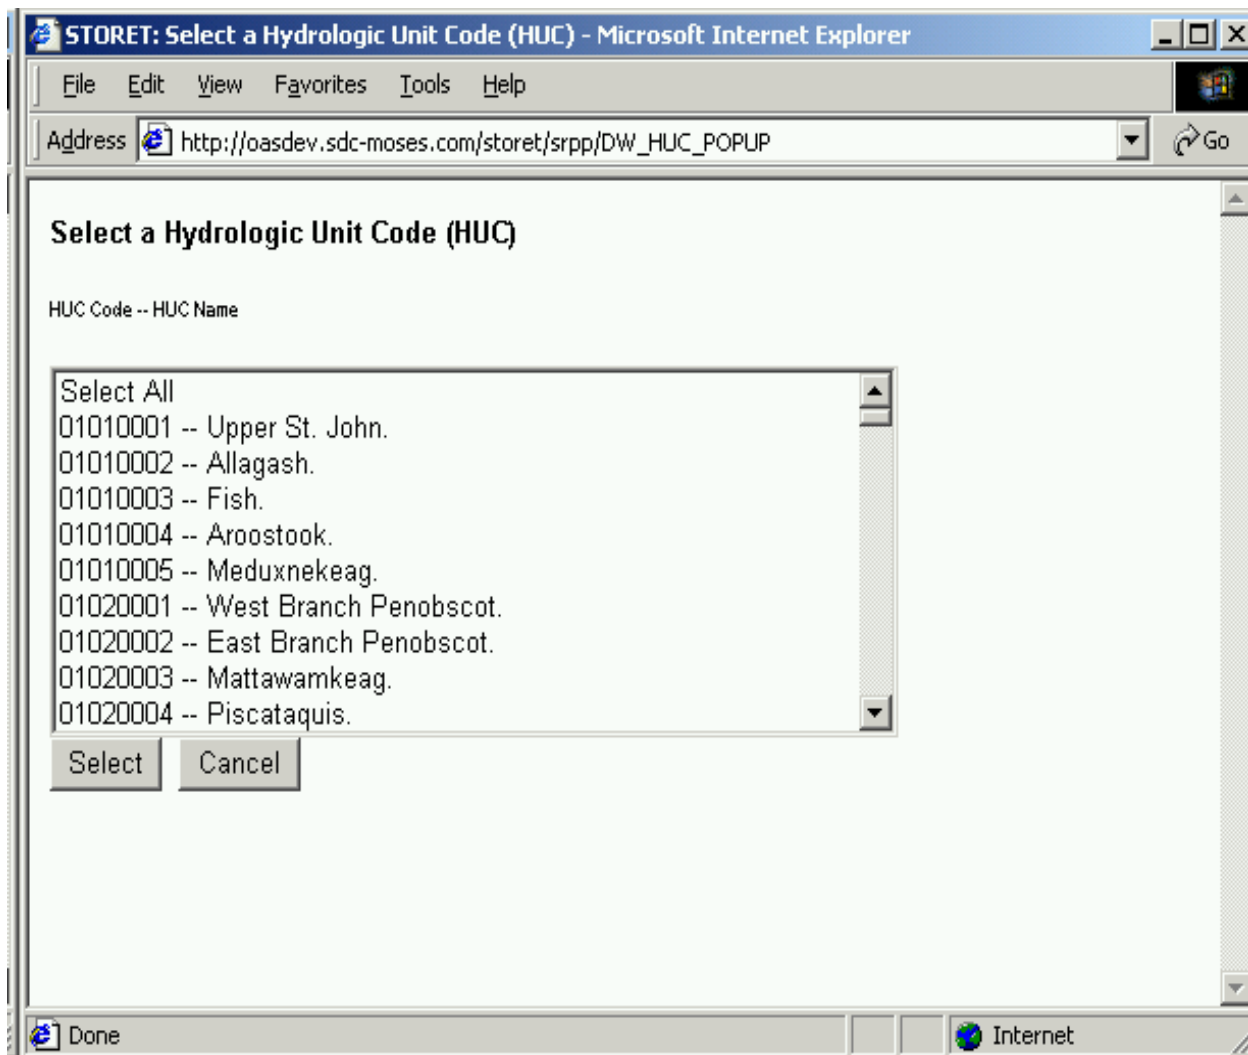

Business Rules:

- C All Hydrologic Units are displayed.
- C Only one Hydrologic Unit can be selected per search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C Only valid Hydrologic Unit Codes are returned to the Station Search Criteria page.

Input Parameters:

Natural Language	Parameter
Any valid date in the month for which a monthly report is required	P_MONTH

Links To:

None.

Output Parameters:

None

Internal Procedure Events:**Onload**

- C Query DW_DATA_REQUESTS table for monthly statistics. Formulate the statistics into a message and store in a variable.
- C Send an email using dw_mail_pkg.send procedure to the address stored in dw_glob_var.gv_storet_email variable.

Images:

None.

Business Rules:

- C Provide totals for download types.
- C Provide totals for request modes.
- C Provide totals for the each distribution of filters used for the request.
- C Provide data in the statistics report for a one month period.

Error Handling:

None.

Page Print:

None.

STORET Central Warehouse Specification**SIR:** 1633**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Process_Batch_Requests**Web Page Name:** None**Processing Overview/Description:**

Identifies all STORET data requests via Overnight Batch processing that are in 'New' status or pending Immediate Batch jobs submitted 8 hours prior, and runs them sequentially. This procedure may be scheduled to run periodically in the night.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
DW_DATA_REQUESTS	REQUEST_MODE	N
	REQUEST_STATUS	N
	DATETIME	N

Links From:

STORET Central Warehouse Specification

SIR: 1633

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Process_Data_Request

Web Page Name: None

Processing Overview/Description:

The procedure processes the data request for a given request_id. It fetches the request query text and other request information stored in DW_DATA_REQUESTS table for the given request_id, performs the query, and writes the fetched data to the file. The generated file is compressed and the file attributes are read to update the status of the request record in DW_DATA_REQUESTS table. The procedure then sends an email to the user.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
DW_Data_Requests	REQUEST_ID	N
	REQUEST_TYPE	N
	REQUEST_MODE	N

Links From:

Procedure	Web_Page	Button/Text/Action
DW_Process_Batch_Requests	Not a web page (Scheduled Job)	Scheduler
DW_Process_Pending_Reqs	None	Manual execution
DW_Process_Request_List	None	Manual execution

Procedure	Web_Page	Button/Text/Action
DW_Station_Download_Custom	None	Procedure Call

Input Parameters:

Natural Language	Parameter
Request ID as recorded in DW_DATA_REQUESTS table. Each request is stored in this table with a unique request_id.	p_req_id

Links To:

Procedure	Web_Page	Button/Text/Action
DW_Mail_Pkg.send	none	procedure call

Output Parameters:

None.

Internal Procedure Events:**Onload**

- C Read the record from DW_DATA_REQUESTS table for the given request_id.
- C Open the ref cursor with query_text.
- C Create a file in the download directory with a filename as read from above.
- C Write the record_title to the created file.
- C Fetch data from the database using the ref cursor and append it to the created file.
- C Close the file and compress the file using gzip utility.
- C Read the file size and update the DW_DATA_REQUESTS table with the file size, status and timestamp.
- C Send an email to the user using dw_mail_pkg package. The email address is part of the record read earlier.
- C Update the table with the notification status.

Images:

None.

Business Rules:

- C The record title should be written first to the file.
- C The data fetched should be appended to the file.

Error Handling:

- C Update the request record with Failed status.

Page Print:

None.

STORET Central Warehouse Specification

SIR: 1633

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Process_Data_Request_List

Web Page Name: None

Processing Overview/Description:

Processes the batch data requests provided from a list of previously submitted request_ids. This procedure is intended for running any failed batch data request jobs.

Tables Used:

None.

Links From:

None.

Input Parameters:

Natural Language	Parameter
A comma separated string of request_ids that need to be processed.	P_REQ_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_Process_Data_Request	None (Procedure call)	

Output Parameters:

None.

Internal Procedure Events:**Onload**

- C Validate the request_id(s) by checking them in the DW_DATA_REQUESTS table.
- C Call DW_Process_Data_Request for each request_id sequentially.

Images:

None.

Business Rules:

- C For manual invocation.

Error Handling:

None.

STORET Central Warehouse Specification**SIR:** 1442, 1707**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Proj_Popup**Web Page Name:** Select a Project**Processing Overview/Description:**

The Select a Project page is called by the Results by Project pages and is used to display a list of all available Projects for the Organization the user has selected. The user is able to select a single Project selection from this list. The name and code of the selected Project are passed to the calling Results by Project page where the appropriate fields are populated with this information. National Project selections represent a single Project ID common across Organizations.

Tables:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Project (DI_PROJECT)	PROJECT_CD	Y
	PROJECT_NAME	Y
	PK_ISN	N
Organization (DI_ORG)	FK_ORG	N
	ORGANIZATION_NAME	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Project_Select	Regular Results by Project Biological Results by Project Habitat Results by Project	<Look Up>

Input Parameters:

Natural Language	Parameter
The key of the selected Organizations. This value will be -1 for National Projects	V_ORG
This value is passed from the DW_Project_Select procedure for Organizational National Projects selections. This value is null for non-National Projects.	V_ORG_NAME

Links To:

Procedure	Web_Page	Button/Text
DW_Project_Select	Regular Results by Project Biological Results by Project Habitat Results by Project	<Select>

Output Parameters:

Natural Language	Parameter
The ID and name of the selected Project. By default this value is 'Select a Project'.	AS_PROJ
The key of the selected Project. By default this value is 0.	D_PROJ_LIST

Internal Procedure Events:

- C 'Select' onclick: Populate the Project Name text area on the calling Results by Project page with the Project ID and Project name that the user selects from this pop-up window. Write the corresponding Project primary key to the hidden field D_PROJ_LIST. The project primary key will be the minimum pk_isn found for a National Project group. For National Projects, the Project Name is set as 'National Project (e.g.,' concatenated with the Project Name associated with the minimum pk_isn.
- C 'Cancel' onclick: Close this pop-up window and return focus to the calling Results by Project page. Do not alter the value of the Project Name text area.

Images:

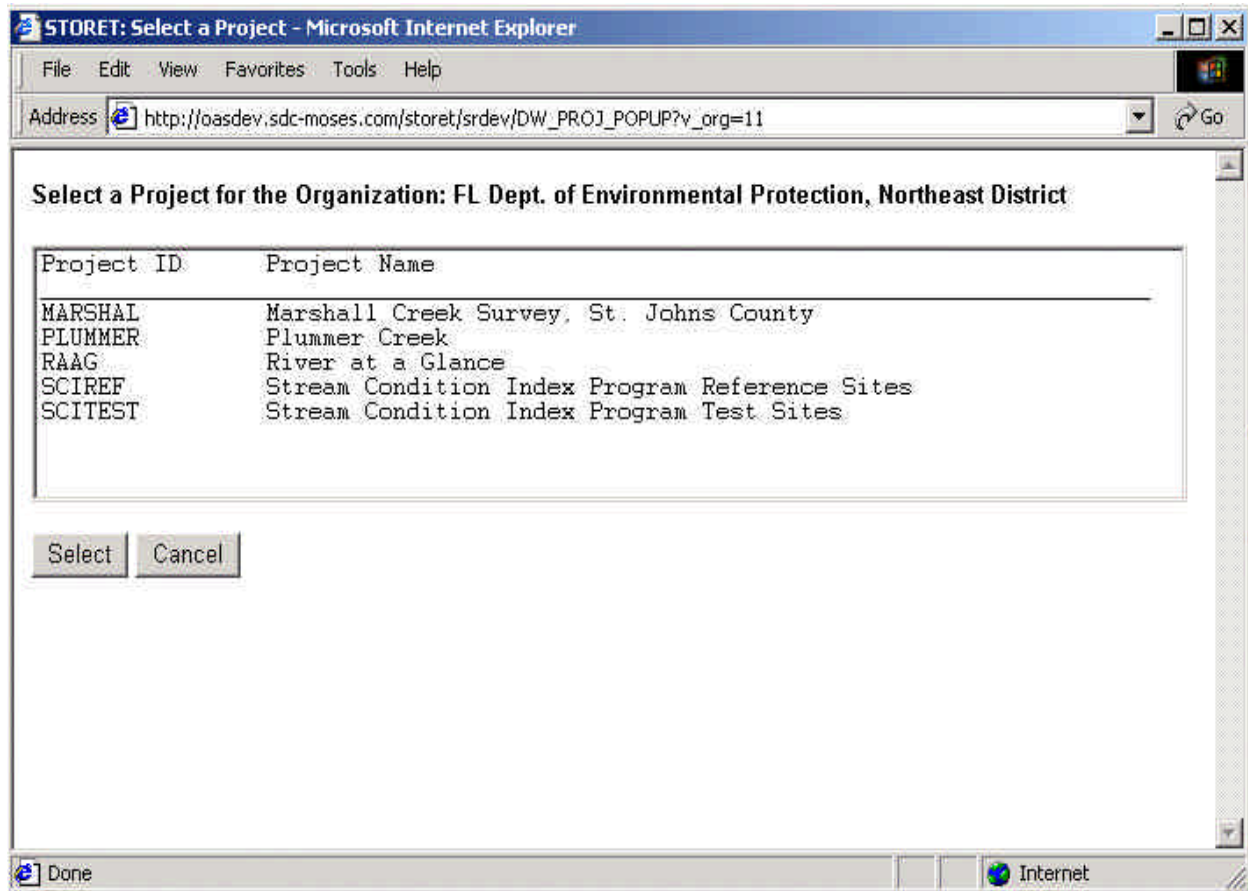

None.

Business Rules:

- C Only one Project row may be selected.

Error Handling:

- C A standard Error Page should be displayed when this page is not loaded upon request.
- C Only valid Project Names and Project Codes are returned to the Results by Project page.

Page Print:

STORET Central Warehouse Specification**SIR:** 1633**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Record_Data_Request**Web Page Name:** None**Processing Overview/Description:**

User data requests including Online or Batch processing are recorded in a table (DW_DATA_REQUESTS). The data includes flags for each type of applied filter, filename, report type, time stamp, file size, request mode, user contact information, record count, query text, title. This information is required for Immediate and Overnight batch processing.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
DW_DATA_REQUESTS	REQUEST_ID	N
	REQUEST_TYPE	N
	DATETIME	N
	FILESIZE_KB	N
	F_STATE	N
	F_COUNTY	N
	F_LATLONG	N

DW_Station_Download_Custom	Station Download Request	Continue or Immediate/Overnight Batch Processing buttons
DW_Result_Hub_Custom/ DW_Station_Download_Custom	Result Download Request	Continue or Immediate/Overnight Batch Processing buttons

Input Parameters:

Natural Language	Parameter
List of filters used for the query. A comma separated string.	P_FILTERS

Natural Language	Parameter
SDS, SDR, SDB, SDH for different request types.	P_FILETYPE
Time stamp of the request.	P_TIMESTAMP
File size in KB for Online. For Batch processing a null value is sent.	P_FILE_LENGTH
The title of the download file. Used only for Batch processing.	P_RECORD_TITLE
Batch processing request mode. Immediate or Overnight.	P_REQUEST_MODE
User Email address for sending report status.	P_EMAIL
Query text in entirety.	P_QUERY
File name to be created for Batch processing.	P_FILENAME
Number of records (stations/results) of the query.	P_RECORD_COUNT

Links To:

None.

Output Parameters:

Natural Language	Parameter
Unique Request_ID used in DW_DATA_REQUESTS table.	P_REQUEST_ID

Internal Procedure Events:**Onload**

- C Parse the value of lv_filters input parameter to identify the filters used for the query.
- C Fetch next value from seq_dw_data_request_id for use as request_id.
- C Substring first 4000 characters of query into query_text, load remainder into query_text2.
- C Insert the request to DW_DATA_REQUESTS table.

Images:

STORET Central Warehouse Specification**SIR:** 1445, 1500, 1502, 1503, 1638, 1631, 1707, 1633, 1706**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Result_Count**Web Page Name:** Result Search Summary**Processing Overview/Description:**

The Result Search Summary page receives and processes a user's search parameters from the nine Result Search Criteria pages, displays a summary of this information, and provides a count of the number of Results that satisfy the search criteria. Based on this count, a user is able to decide whether they wish to create a report or return to the Result Search Criteria page to refine their query. This page also allows a user to customize the reports they create by selecting the data elements they wish to include in their report. Based on the number of Stations, this procedure allows Online or Batch processing for the data request. The Batch processing can be both Immediate or Overnight. The limits that decide the range for different types of processing are enforced using global variables in DW_GLOB_VAR package. If a report exceeds the permitted number of Results, the user is told that they must refine their query and is unable to generate a report. If there are no Results for a report, the user is told that they must refine their query and is unable to generate a report.

The direction of the Eastern Limit. By default this value is NULL.	DIR_MAXLONG
The direction of the Western Limit. By default this value is NULL.	DIR_MINLONG
The Hydrologic Unit Code value. By default this value is 'ALL'	AS_HUC
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1

Natural Language	Parameter
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1
The month of the beginning date of the second query date range. By default this value is NULL or dummy (displayed as “—”).	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL or 0 (displayed as “—”).	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL or 0 (displayed as “—”).	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL or dummy (displayed as “—”).	END_MON2
The day of the month of the ending date of the second query date range. By default this value is NULL or 0 (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL or 0 (displayed as “—”).	END_YYYY2
The month of the beginning date of the third query date range. By default this value is NULL or dummy (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL or 0 (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL or 0 (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL or dummy (displayed as “—”).	END_MON3
The day of the month of the ending date of the third query date range. By default this value is NULL or 0 (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL or 0 (displayed as “—”).	END_YYYY3

Natural Language	Parameter
The month of the beginning date of the fourth query date range. By default this value is NULL or dummy (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL or 0 (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL or 0 (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL or dummy (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL or 0 (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL or 0 (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List).	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
The number (PK_ISN) that identifies the project the user selected. Default is 0.	D_PROJ_LIST

Natural Language	Parameter
The user selected project name. Default is NULL. Although passed in, this variable is replaced by proj_cd within the procedure.	AS_PROJ
The names of the selected Station(s) in a string separated by HTML break tags (). By default this value is NULL.	V_STATION_NAMES
The Station Ids of the selected Station(s) in a string separated by a break. By default this value is DUMMY.	AS_STATION
A Pl/Sql table of selected Stations.	STATION_LIST
The search string used to identify available Station Alias Type.	AS_EXTREF
The user selected Station Alias Type.	D_EXTREF_LIST
A Pl/Sql table of selected Activity Mediums (Medium Key List).	D_MEDIUM_LIST
A Pl/Sql table of selected Activity Intents (Intent Key List).	D_INTENT_LIST
A Pl/Sql table of selected Sample Communities (Community Key List).	D_COMMUNITY_LIST
The type of Result being searched (Regular, Biological, or Habitat).	RESULT_TYPE

Links To:

Procedure	Web_Page	Button/Text
DW_Result_Hub_Custom	Download Result Report	<Continue>

Output Parameters:

Natural Language	Parameter
The From clause of the SQL statement that will be used for selecting results.	V_FROMSTMT

Natural Language	Parameter
The Where clause of the SQL statement that will be used for selecting results.	V_WHERESTMT
A Pl/Sql table of selected Columns for the report (Column Name List).	V_COLUMNS
The number of results matching the search criteria (this is the same number that is displayed on the DW_Result_Count page).	V_RESULTCOUNT
Search criteria used in the query. A tilde delimited string.	V_FILTERS
Indicates whether RULE BASED query optimization should be employed (this is for performance tuning).	V_RULE_OPTIMIZATION
The type of Result Report being generated (Regular, Biological, or Habitat).	V_REPORT_TYPE

Internal Procedure Events:

Onload

- C Display titles and values for the search criteria that the user selected on the previous page.
 - C Display the number of Results that match the search criteria that the user selected on the previous page.
 - C Display the report elements that comprise the selected Result Report type (defined in the APP_COLUMN_NAMES table).
 - C Check the default report element check boxes based on the type of Result Report being generated.
- n For Regular Result Reports: Org Name, Station ID, Station Location Info, Station Lat/Long, Visit Num, Activity Id, Activity Start [date], Activity Medium, Activity Type, Activity Category-Rep Num, Activity Depth, Activity Depth Unit, Characteristic Name, Sample Fraction, Value Type, Statistic Type, Result Value as Text, Units, Analytical Proc ID.
 - n For Biological Result Reports: Org Name, Station ID, Station Location Info, Station Lat/Long, Visit Num, Activity Id, Activity Start [date], Activity Medium, Activity Type, Activity Category-Rep Num, Subject Taxon, Biopart, Activity Depth, Activity Depth Unit, Characteristic Name, Sample Fraction, Value Type, Statistic Type, Result Value as Text, Units, Analytical Proc ID.

- n** For Habitat Result Reports: Org Name, Station ID, Station Location Info, Station Lat/Long, Visit Num, Activity Id, Activity Start [date], Activity Type, Activity Category-Rep Num, Characteristic Name, Sample Fraction, Value Type, Statistic Type, Result Value as Text, Units, Analytical Proc ID.

Custom Report Section

- C 'Select All' onclick: Check all report element check boxes.
- C 'Clear All' onclick: Uncheck all report element check boxes.
- C 'Restore Defaults' onclick: Check only the default report elements.

Form Level

- C 'Continue>>' onclick: Call the procedure DW_Result_Hub_Custom and pass it the processed Result search criteria (in the form of a SQL From clause and Where clause), the number of results that match the selection criteria, the list of columns that the user has selected for their report, the type of Result Report being requested, and whether RULE BASED query optimization should be used (this is currently only used for reports that include PROJECT search criteria).
- C '<<Back' onclick: Closes the page and returns to the selected Result Criteria page.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only display location information for the geographic search option that has been selected (State/County (which is the default), Latitude/Longitude, or HUC). Do not display for Station or Project searches.

- C Display Organization(s) for Project and Organization searches (these occur on the Project and Station search pages when the user selects an Organization but does not select either a specific Project or specific Stations).
- C Display Project ID and Project Name. Concatenate 'National Project (e.g., ' to the beginning of the National Project Name, and ')' to the end of the Project Name for National Projects.
- C Always display the Station(s) that have been selected. Display 'All' if the user has not chosen specific Stations to base search on.
- C Always display the Date range(s) that have been selected. Display 'All' if the user has selected the default Date values (From = Jan 1, 1900, To =Current date).
- C Always display the Characteristics that have been selected. Display 'All' if the user has not chosen specific Characteristics to base search on.
- C For Regular Result Searches, always display the Medium that have been selected. Display 'All' if the user has not chosen specific Activity Medium so search based upon.
- C For Biological Result Searches, always display the Intents that have been selected. Display 'All' if the user has not chosen specific Activity Intents to search based upon.
- C For Biological Result Searches, display the Communities that have been selected if the Activity Intent is 'Taxon Abundance' or 'All'. Display 'All' if the user has not chosen specific Communities to base search on.
- C Provide Online download for all result counts less than or equal to the value set by dw_glob_var.gv_rslt_online_lmt.
- C Provide Batch download option for all result counts between dw_glob_var.gv_rslt_online_lmt and dw_glob_var.gv_rslt_Immediate_lmt. This includes both Immediate and Overnight Batch processing.
- C Provide Overnight Batch download option for all result counts between dw_glob_var.gv_rslt_Immediate_lmt and dw_glob_var.gv_rslt_Overnight_lmt. This include Overnight Batch processing only.
- C Do not provide any download option when station count is greater than dw_glob_var.gv_rslt_overnight_lmt.

Error Handling:

- C A standard Error Page should be displayed when this page is not loaded upon request.
- C An alert is displayed if the user attempts to generate a report without having at least one report element selected.
- C Enforces report size restrictions as handled by global variables.

Page Print:

First half of Page:

The screenshot shows a web browser window titled "EPA > STORET > Result Search Summary - Microsoft Internet Explorer". The address bar shows the URL "http://oasdev.sdc-moses.com/storet/srpp/DW_RESULT_COUNT". The page features the EPA logo and the text "U.S. Environmental Protection Agency". Below this is a navigation bar with links: "Recent Additions", "Contact Us", "Print Version", and a search box with a "GO" button. A breadcrumb trail reads: "EPA Home > Water > Wetlands, Oceans, & Watersheds > Monitoring and Assessing Water Quality > STORET > Data Warehouse". The main heading is "Result Search Summary". Below it, it states "Number of Results Returned: 3,049". A box titled "Search Criteria" contains the following information: "State: CALIFORNIA", "County: ALL", "Activity Start Dates: 01-JAN-1990 to 29-AUG-2003", "Medium: Water", and "Characteristic(s): Abietylamine, Acenaphthene, Acenaphthylene, Acetaldehyde, Acetalol, Acetamide, pH, Phenacetin". Below the box, instructions read: "Select 'Back' to modify search criteria and refine your query. Select 'Continue' to generate a report based on your current selections. You may customize the content of your report by selecting Data Elements below." At the bottom of the box are two buttons: "<<Back" and "Continue>>". The browser's status bar at the bottom shows "Done" and "Internet".

STORET Central Warehouse Specification**SIR:** 1441, 1440, 1439, 1437, 1435, 1443, 1500, 1563**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Result_Criteria_GEO**Web Page Name:** Regular Results by Geographic Location**Processing Overview/Description:**

The Regular Results by Geographic Location page is the first Regular Result search page of the STORET Central Warehouse and provides four major search areas: Geographic Location, Date, Activity Medium, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. In addition, the Geographic Location dimension is divided into three sub-dimensions: State/County, Latitude/Longitude, and Hydrologic Unit Code (HUC). The user is able to select one of these three location sub-dimension per Result query. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
State (DI_GEO_STATE)	STATE_NAME	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Regular Results by Geographic Location

Input Parameters:

These parameters are passed from the three Popup windows (DW_County_Popup, DW_HUC_Popup, and DW_Char_Alias_Popup) back to this procedure.

Natural Language	Parameter
The names of the selected County(s) in a comma separated string. By default this value is 'ALL'.	AS_COUNTY
The codes of the selected County(s) in a comma separated string. By default this value is 'ALL'.	V_COUNTY_CODE
The Hydrologic Unit Code value. By default this value is 'ALL'.	AS_HUC
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_County_Popup	STORET: Select Counties	Look Up
DW_HUC_Popup	STORET: Select a Hydrologic Unit Code (HUC)	Look Up
DW_Char_Alias_Popup	STORET: Characteristic Search Results	Search
DW_Result_Count	Result Search Summary	Continue

Output Parameters:

Natural Language	Parameter
Identifies the geographic location parameter being used for the search. By default this value is 'StateCounty'.	GEOGRAPHIC
The name of the selected State. By default this value is 'ALL'.	AS_STATE

Natural Language	Parameter
The names of the selected County(s) in a comma separated string. By default this value is 'ALL'.	AS_COUNTY
The codes of the selected County(s) in a comma separated string. By default this value is 'ALL'.	V_COUNTY_CODE
The Northern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 90.	MAX_LAT_DD
The Western Limit of a Latitude/Longitude query in decimal degrees. By default this value is 180.	MIN_LONG_DD
The Eastern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 0.	MAX_LONG_DD
The Southern Limit of a Latitude/Longitude query in decimal degrees. By default this value is 0.	MIN_LAT_DD
The direction of the Northern Limit. By default this value is N.	DIR_MAXLAT
The direction of the Southern Limit. By default this value is N.	DIR_MINLAT
The direction of the Eastern Limit. By default this value is W.	DIR_MAXLONG
The direction of the Western Limit. By default this value is W.	DIR_MINLONG
The Hydrologic Unit Code value. By default this value is 'ALL'	AS_HUC
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1

Natural Language	Parameter
The month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_MON2
The day of the month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_YYYY2
The month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_MON3
The day of the month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_YYYY3

Natural Language	Parameter
The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags(). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is ‘DUMMY’.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE

Natural Language	Parameter
A Pl/Sql table of selected Activity Mediums (Medium Key List).	D_MEDIUM_LIST

Internal Procedure Events:

Onload

- C Populate the State Name list box with State Names organized alphabetically by country (with the U. S. first followed by Mexico and Canada).
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Populate the Activity Medium list box.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Geographic Location Section

- C State/County 'Lookup' onclick: Display a pop-up window showing the available counties for the state currently selected from the drop-down list. Populate the County Name(s) textarea with the Counties that the user selects from the pop-up window.
- C HUC 'Lookup' onclick: Display a pop-up window showing all available HUC codes and their corresponding names. Populate the Cataloging Unit text box with the HUC code that the user selects from the pop-up window.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the

user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.

- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user selects 'All' State/Counties, all result records are included in the search.
- C If the user selects 'All' HUCs, all result records are included in the search.
- C If the user selects default latitude/longitude values (i.e., N=90, S=0, E=0, W=180), all result records are included in the search.
- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To Date = current date), all result records are included in the search.

- C If a list of Activity Mediums is selected that includes 'Select All', all Activity Mediums are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C The user will not be allowed to proceed to the next page if a non-numeric character is entered in the latitude/longitude fields or if the entry is outside the Latitude/Longitude permitted value range.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- An alert is displayed if the user attempts to perform a County look-up before selecting a State.
 - The county field is reset to 'All' if the selected State is changed.
 - The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g. Jan 1, 2003 - Jan 1, 1900).

STORET Central Warehouse Specification

SIR: 1435, 1436, 1437, 1442, 1443, 1500, 1563, 1707

Package Name: SDW (STORET Data Warehouse)

Procedure Names: DW_Result_Criteria_Project, DW_Project_Select

Web Page Name: Regular Results by Project

Processing Overview/Description:

The Regular Results by Project page is the third Regular Result search page of the STORET Central Warehouse and provides four major search areas: Organization/Project, Date, Activity Medium, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. The user is able to select a single Project from a single Organization; or, a National Project selection with retrieve data spanning all Organizations that share a common Project ID. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Organization (DI_ORG)	ORGANIZATION_NAME	Y
	ORGANIZATION_ID	Y
	PK_ISN	N
Project (DI_PROJECT)	PROJECT_CD	Y
	PROJECT_NAME	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Regular Results by Project

Input Parameters:

These parameters are passed from the two Popup windows (DW_Project_Popup and DW_Char_Alias_Popup) back to this procedure.

Natural Language	Parameter
The name of the selected Project. By default this value is 'Select a Project'.	AS_PROJ
The key of the selected Project. By default this value is 0.	D_PROJ_LIST
The key of the selected Organization. By default this value is 0. The Organization selection for National Projects is given the value of -1.	D_ORG_LIST
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_Project_Popup	STORET: Select Project	Look Up
DW_Char_Alias_Popup	STORET: Characteristic Search Results	Search
DW_Result_Count	Result Search Summary	Continue

Output Parameters:

Natural Language	Parameter
The ID and name of the selected Project. By default this value is 'Select a Project'.	AS_PROJ
The key of the selected Organization. By default this value is 0. The Organization selection for National Projects is given the value of -1.	D_ORG_LIST
The key of the selected Project. By default this value is 0. For National Projects, this value is the minimum DI_PROJECT.PK_ISN across all contributing Organizations.	D_PROJ_LIST
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1
The month of the beginning date of the second query date range. By default this value is NULL (displayed as "--").	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL (displayed as "--").	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL (displayed as "--").	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL (displayed as "--").	END_MON2

Natural Language	Parameter
The day of the month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_YYYY2
The month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_MON3
The day of the month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_YYYY3
The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4

Natural Language	Parameter
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is ‘DUMMY’.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is ‘ON’.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE
A Pl/Sql table of selected Activity Mediums (Medium Key List).	D_MEDIUM_LIST

Internal Procedure Events:

Onload

- C Populate the Organization list box with Organization IDs and Names organized by Organization ID.
- C For Date Range 1, select default values of FROM = ‘Jan-1-1900’ and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., ‘—’) to denote this.
- C Populate the Activity Medium list box.

- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Organization/Project Section

- C Project 'Lookup' onclick: Display a pop-up window showing the available Projects for the Organization currently selected from the drop-down list. Populate the Project textbox with the Project ID and Project Name that the user selects from the pop-up window and populate the hidden variable D_PROJ_LIST with the corresponding key; or minimum DI_PROJECT.PK_ISN value for National Projects.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.
- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user has selected an Organization but does not select a Project, data for the selected Organization is retrieved for the report.
- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To = current date), all result records are included in the search.
- C If a list of Activity Mediums is selected that includes 'Select All', all Activity Mediums are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- An alert is displayed if the user attempts to perform a Project look-up before selecting an Organization.
- An alert is displayed if the user attempts to 'Continue' if the National Organization Selection is made without selecting a Project.
- The Project field is reset to 'Select a Project' if the selected Organization is changed.
- The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g., Jan 1, 2003 - Jan 1, 1900).

STORET Central Warehouse Specification

SIR: 1435, 1436, 1437, 1438, 1443, 1500, 1563

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Result_Criteria_Station

Web Page Name: Regular Results by Station

Processing Overview/Description:

The Regular Results by Station page is the second Regular Result search page of the STORET Central Warehouse and provides four major search areas: Organization/Station, Date, Activity Medium and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. The user is able to select Stations from multiple Organizations, but is limited to selecting a maximum of 100 Stations per query. The user is able to select up to four date ranges and 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Organization (DI_ORG)	ORGANIZATION_NAME	Y
	ORGANIZATION_ID	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Regular Results by Station

Input Parameters:

These parameters are passed from the three Popup windows (DW_Extref_Popup, DW_Station_Popup and DW_Char_Alias_Popup) back to this procedure.

Natural Language	Parameter
The name of the selected Station Alias Type. By default this value is 'STANDARD'.	AS_EXTREF
The key of the selected Station Alias Type. By default this value is 0.	D_EXTREF_LIST
A Pl/Sql table of selected Stations (Station Key List). By default this value is 'DUMMY'.	STATION_LIST
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_Extref_Popup	STORET: Select a Station Alias Type	Look Up
DW_Station_Popup	STORET: Station Search Results	Search Stations
DW_Char_Alias_Popup	STORET: Characteristic Search Results	Search
DW_Result_Count	Result Search Summary	Continue

Output Parameters:

Natural Language	Parameter
The name of the selected Station Alias Type. By default this value is 'STANDARD'.	AS_EXTREF
The key of the selected Station Alias Types. By default this value is 0.	D_EXTREF_LIST
The search string used to find Stations within the Organization. By default this value is 'DUMMY'.	AS_STATION

Natural Language	Parameter
A Pl/Sql table of selected Stations (Station Key List). By default this value is 'DUMMY'.	STATION_LIST
The names of the selected Station(s) string separated by HTML break tags (). By default this value is NULL.	V_STATION_NAMES
The month of the beginning date of the first query date range. By default this value is Jan.	FROM_MON1
The day of the month of the beginning date of the first query date range. By default this value is 1.	FROM_DD1
The year of the beginning date of the first query date range. By default this value is 1900.	FROM_YYYY1
The month of the ending date of the first query date range. By default this value is the current month.	END_MON1
The day of the month of the ending date of the first query date range. By default this value is the current day of the month.	END_DD1
The year of the ending date of the first query date range. By default this value is the current year.	END_YYYY1
The month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_MON2
The day of the month of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_DD2
The year of the beginning date of the second query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY2
The month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_MON2
The day of the month of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_DD2
The year of the ending date of the second query date range. By default this value is NULL (displayed as “—”).	END_YYYY2

Natural Language	Parameter
The month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_MON3
The day of the month of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_DD3
The year of the beginning date of the third query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY3
The month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_MON3
The day of the month of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_DD3
The year of the ending date of the third query date range. By default this value is NULL (displayed as “—”).	END_YYYY3
The month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_MON4
The day of the month of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_DD4
The year of the beginning date of the fourth query date range. By default this value is NULL (displayed as “—”).	FROM_YYYY4
The month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_MON4
The day of the month of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_DD4
The year of the ending date of the fourth query date range. By default this value is NULL (displayed as “—”).	END_YYYY4

Natural Language	Parameter
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
The Characteristic naming convention being used for the Characteristic Search. By default this value is 0 (STORET DEFAULT).	AS_CHAR_ALIAS_TYPE
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST
Boolean flag used to signal whether taxonomic names should be included in characteristic searches. By default this value is 'ON'.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST
Used to identify which type of result data to query against.	RESULT_TYPE
A Pl/Sql table of selected Activity Mediums (Medium Key List).	D_MEDIUM_LIST

Internal Procedure Events:

Onload

- C Populate the Organization list box with Organization IDs and Names organized by Organization ID.
- C For Date Range 1, select default values of FROM = 'Jan-1-1900' and TO = the current date. The other three date values should be unselected by default and will contain line spaces (i.e., '—') to denote this.
- C Populate the Activity Medium list box.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Station Section

- C 'Look Up' onclick: Display a popup window showing the Station Alias Types that match the Organization selected by the user. If the user has not selected an Organization, display an alert message prompting them to do so. Populate the Station Alias Type display field with the Station Alias Type the user selects from the pop-up window.
- C 'Search Stations' onclick: Display a pop-up window showing the Stations that match the search string, search type, Station Alias Type, and Organization entered by the user. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Station listbox with the Stations the user selects from the pop-up window. No more than 100 Stations can be added to the Selected Stations list.
- C 'Clear Selected' onclick: All selected Stations are removed from the stations selected list.
- C 'Clear All' onclick: All Stations are removed from the stations selected list.

Date Section

- C Block the selection of invalid dates by altering the day list box to reflect the correct number of days in the month each time the month or year is changed.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.
- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for a description of the standard header links on each page.
- C See DW_Bottom_of_Page Specifications for a description of the standard footer links on each page.

Images:

The only images used on the STORET Central Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user has selected an Organization but does not select any Stations, data for the selected Organization is retrieved for the report.
- C Stations can not be added to the Selected Stations list more than once.
- C If the user selects 'Search by Station Alias Type' but does not change the selected Station Alias Type (i.e., default of 'STANDARD'), then Stations will be searched by ID.
- C The user may add no more than 100 Stations to the Selected Stations list. The attempted addition of Stations in excess of this limit is blocked and an alert is displayed.
- C If the user selects default date values (i.e., From Date = Jan 1, 1900, To = current date), all result records are included in the search.
- C If a list of Activity Mediums is selected that includes 'Select All', all Activity Mediums are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.

- C An alert is displayed if the user attempts to perform a Station search before entering a search string.
- C An alert is displayed if the user attempts to perform a Station search before selecting an Organization.
- C An alert is displayed if the user attempts to perform a Station Alias Type lookup before selecting an Organization.
- C The user will not be allowed to proceed to the next page if an invalid date range is entered in the month-day-year selection boxes (e.g., Jan 1, 2003 - Jan 1, 1900).

STORET Central Warehouse Specification**SIR:** 1446, 1449, 1500, 1502, 1503, 1614, 1638, 1633, 1706, 1713**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Result_Download_Custom**Web Page Name:** None**Processing Overview/Description:**

The DW_Result_Download_Custom procedure receives processed result search criteria and the list of requested report elements from the DW_Result_Hub_Custom procedure. Records the request in DW_DATA_REQUEST table and generates a tilde delimited text file report for online requests. For Batch requests the request is submitted to the job queue and an email is sent to the requester. For online requests, the name of the text file is returned to DW_Station_Hub_Custom so that a link to the file can be displayed to the user. The created report contains only the columns that correspond to the report elements selected by the user. The titles for these columns are displayed as the first line of text in the report.

Procedure	Web_Page	Button/Text
DW_Result_Hub_Custom	Download Result	None (called automatically during load)

Input Parameters:

Natural Language	Parameter
The From clause of the SQL statement that will be used for selecting results.	V_FROMSTMT
The Where clause of the SQL statement that will be used for selecting results.	V_WHERESTMT
A Pl/Sql table of selected Columns for the report (Column Name List).	V_COLUMNS
Used to pass a report file name to this procedure. This is set to 'NONE' for non-batched reports.	V_FILENAME
Indicates whether RULE BASED query optimization should be employed (this is for performance tuning).	V_RULE_OPTIMIZATION
The type of Result Report being generated (Regular, Biological, or Habitat).	REPORT_TYPE
User provided email in DW_Result_hub_custom page.	P_EMAIL
User provided 3 letter string for report prefix in DW_Result_hub_custom page.	P_PREFIX
Request mode (Online/Immediate/Overnight)	V_MODE
Number of records requested.	P_RECORD_COUNT

Natural Language	Parameter
Comma separated string of filters used in the query.	V_FILTERS
Request_ID of the request as recorded in DW_Data_Request table.	LV_REQUEST_ID

Links To:

Procedure	Web_Page	Button/Text
DW_Result_Hub_Custom	Download Result	None (called automatically during load)
DW_RECORD_DATA_REQUEST	None	None (called automatically during load)

Output Parameters:

Natural Language	Parameter
The file name used for report generation. This is passed so that a link to the report can be created.	OUT_FILE
Job Request_ID. (Primary key in DW_DATA_REQUESTS table).	REQUEST_ID
Comma separated string of filters used in the query.	V_FILTERS
Used to pass a report file name to this procedure. This is set to 'NONE' for non-batched reports.	LV_FILETYPE
Timestamp of the request	LV_TIMESTAMP
Download file length.	LV_FILE_LENGTH
Record Title for the download.	V_PRINT_NAMES_LIST
Request Mode (Online/Immediate/Overnight. The later two are Batch processing).	V_MODE
User provided email address	P_EMAIL
Complete SQL statement of the request query	V_SQLSTMT
filename of the download file name	LV_FILE_NAME
Number of records of the request.	P_RECORD_COUNT

Internal Procedure Events:**Onload**

- C Record the request into DW_DATA_REQUESTS table using DW_Record_data_request procedure.
- C For online request, generate report based on received parameters. Update the DW_DATA_REQUESTS table with the size of the file. Return file name to the calling procedure.
- C For Batch (Immediate) request, submit a job using DBMS_JOB and update dw_data_requests table with the job_queue_id. Send an email to user with Request_ID and return the Request_ID to calling procedure.
- C For Batch (Overnight) request, send an email to user with Request_ID and return the Request_ID to calling procedure. A scheduled job will run these jobs overnight.

Images:

None.

Business Rules:

- C Display Column Titles based on the report elements selected and the contents of the APP_COLUMN_NAME table. See chart below for a list of these titles.
- C Display only the columns that correspond to the list of selected report elements.
- C Separate all report columns with the tilde sign ('~').
- C Do not return the name of the report file created until report generation has completed.
- C Display report columns in the order listed below.
- C Display Converted Result Values in scientific notation with 4 decimal places (for example 9.9999E-12).
- C Display dates in the format YYYY-MM-DD HH24:MI:SS (e.g., 1973-04-11 13:30:00).

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C Capture standard file creation (disk I/O) errors and display customized messages if they occur.

Page Print:

None. See DW_Result_Hub_Custom.

STORET Central Warehouse Specification**SIR:** 1557**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Result_Download_Zip**Web Page Name:** Download Results**Process Overview/Description:**

The DW_Result_Download_Zip procedure takes a report download file and replaces it with a new report download file in gzip format. A link to this file is then presented to the requesting user.

Tables:

(Display Fields are listed in the order they are displayed)

None.

Links From:

Procedure	Web_Page	Button/Text
DW_Result_Hub_Custom	Download Results	Continue

Input Parameters:

Natural Language	Parameter
The name of the report download file.	OUT_FILE

Links To:

Procedure	Web_Page	Button/Text
DW_Result_Download_Custom	Download Site Description	Called automatically when page is loaded.
DW_Result_Download_Zip	Create Report Download in Zip Format	Called when <Continue> button is pressed.

Output Parameters:

Natural Language	Parameter
The name of the report download file in gzip format.	OUT_FILE

Internal Procedure Events:**Onload**

- C Call DW_Exec_OS Java procedure that executes the Unix cp command to make a copy of the OUT_FILE created by DW_Result_Download_Custom.
- C Call DW_Exec_OS Java procedure that executes the Unix gzip command to make a gzip formatted version of the file copy. Display a link to the gzip format report file.
- C Display the size of the gzip format report file in kilobytes (KB) if the file has been created.

General

- C See DW_Top_of_Page Specifications for standard header and sidebar links on each page.
- C See DW_Bottom_of_Page Specifications for standard footer links on each page.

Images:

See General Design guidelines for standard images on each page. The only images used on the STORET Data Warehouse web site are those that are included in the EPA Standard Web Template.

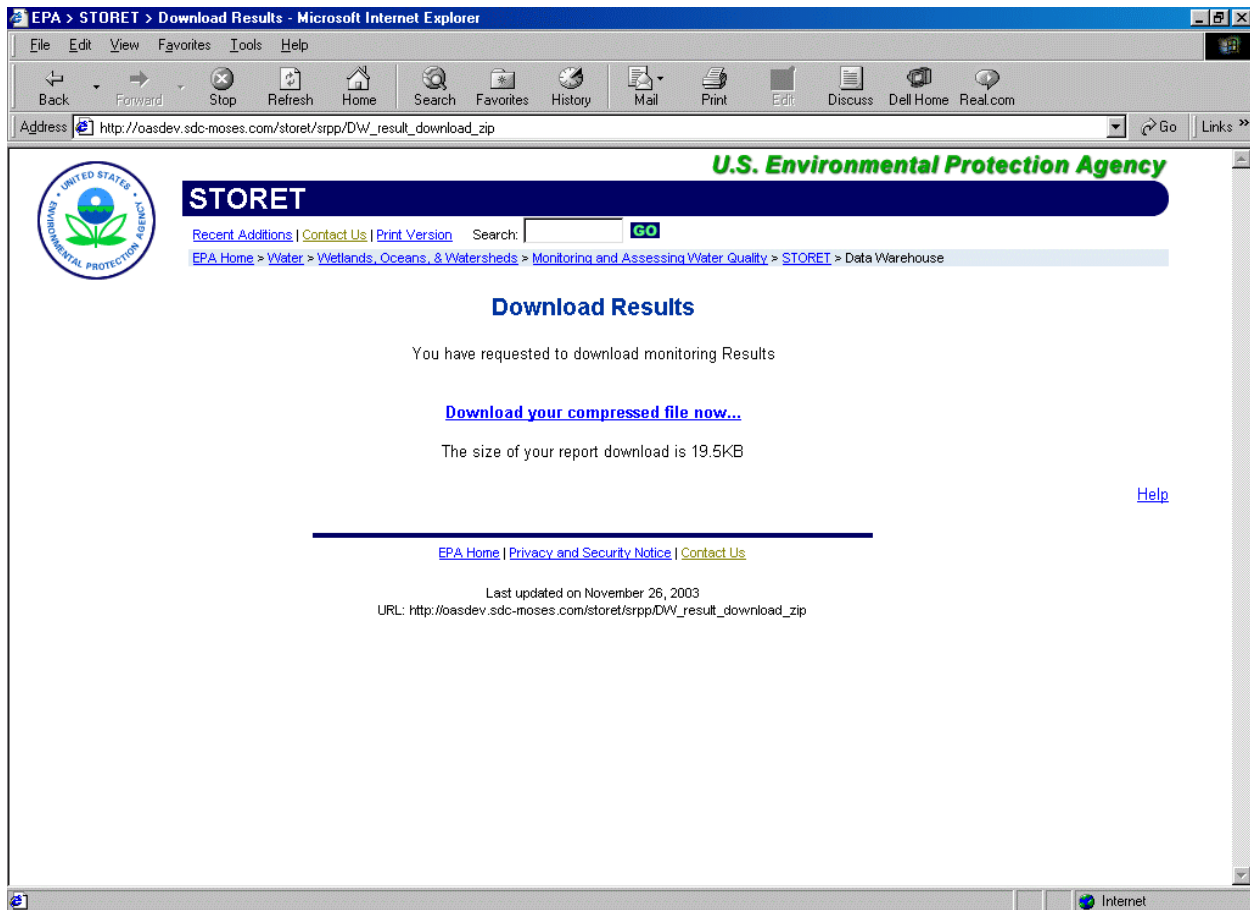

Business Rules:

None.

Error Handling:

- If the attempt to gzip the report download file is unsuccessful, an error message will be displayed rather than a link to the gzip format report file.
- A standard Error Page should be displayed when this page is not loaded upon request.

Page Print:

A-DW_Result_Download_Zip-4

STORET Central Warehouse Specification**SIR:** 1446, 1557, 1631,1633**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Result_Hub_Custom**Web Page Name:** Download Results**Processing Overview/Description:**

The DW_Result_Hub_Custom procedure serves as a gatekeeper that generates the page header and footer, then passes control to the DW_Result_Download_Custom procedure and passes the required parameters to create a report. See the Web Page Development Specification for DW_Result_Download_Custom for a description of the report format. This also provides a link to compress the data file for online processing. For Batch processing, it provides the data request submission information

Tables:

(Display Fields are listed in the order they are displayed)

STORET Central Warehouse Specification

SIR: 1363, 1364, 1365, 1366, 1367, 1369, 1475, 1563

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Station_Criteria

Web Page Name: Station Search Criteria

Processing Overview/Description:

The Station Search Criteria page provides a single point for data entry of the Station selection parameters that a user is most likely to query. The page is divided into four major areas: Geographic Location, Station Type, Characteristic, and Organization. A user is able to accept a default value or enter specific selection criteria for each of these query dimensions. In addition, the Geographic Location dimension is divided into three sub-dimensions: State/County, Latitude/Longitude, and Hydrologic Unit Code (HUC). The user is able to select one of these three location sub-dimension per Station query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
State (DI_GEO_STATE)	STATE_NAME	Y
	PK_ISN	N
	SORT_ORDER	N
Station Types (DI_STATN_TYPES)	PRIMARY_TYPE	Y
	SECONDARY_TYPE	Y
	PK_ISN	N
Organization (DI_ORG)	ORGANIZATION_ID	Y
	ORGANIZATION_NAME	Y

Entity	Attribute	Display
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Stations by Geographic Location

Input Parameters:

These parameters are passed from the three Popup (DW_County_Popup, DW_HUC_Popup, and DW_Char_Popup) windows back to this procedure.

Natural Language	Parameter
The names of the selected County(s) in a comma separated string. By default this value is 'ALL'.	AS_COUNTY
The codes of the selected County(s) in a comma separated string. By default this value is 'ALL'.	V_COUNTY_CODE
The Hydrologic Unit Code value. By default this value is 'ALL'.	AS_HUC
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_County_Popup	STORET: Select Counties	Look Up
DW_HUC_Popup	STORET: Select a Hydrologic Unit Code (HUC)	Look Up

Procedure	Web_Page	Button/Text
DW_Char_Popup	STORET: Characteristic Search Results	Search
DW_Station_Count	Station Search Summary	Continue

Output Parameters:

Natural Language	Parameter
Identifies the geographic location parameter being used for the search.	GEOGRAPHIC
The name of the selected State.	AS_STATE
The names of the selected County(s) in a comma separated string.	AS_COUNTY
The codes of the selected County(s) in a comma separated string.	V_COUNTY_CODE
The Northern Limit of a Latitude/Longitude query in decimal degrees.	MAX_LAT_DD
The Western Limit of a Latitude/Longitude query in decimal degrees.	MIN_LONG_DD
The Eastern Limit of a Latitude/Longitude query in decimal degrees.	MAX_LONG_DD
The Southern Limit of a Latitude/Longitude query in decimal degrees.	MIN_LAT_DD
The direction of the Northern Limit.	DIR_MAXLAT
The direction of the Southern Limit.	DIR_MINLAT
The direction of the Eastern Limit.	DIR_MAXLONG
The direction of the Western Limit.	DIR_MINLONG
The Hydrologic Unit Code value.	AS_HUC
A Pl/Sql table of selected Station Types (Station Type Key List).	D_STYPE_LIST
Flag to identify whether a user wishes to filter stations based on Characteristic.	CHARACTERISTIC

Natural Language	Parameter
The names of the selected Characteristic(s) in a comma separated string.	V_CHAR_NAMES
The search string used to identify available Characteristics.	AS_CHAR
A Pl/Sql table of selected Characteristics (Characteristic Key List) .	CHAR_LIST
The type of Characteristic naming convention used for the Characteristic search.	AS_CHAR_ALIAS_TYPE
Boolean flag used to signal whether taxonomic names should be included in characteristic searches.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST2

Internal Procedure Events:

Onload

- C Populate and format the Station Types list box with Primary and Secondary Station Type Names.
- C Populate and format the Organization list box with Organization IDs and Organization Names.
- C Populate the empty Selected Characteristics list box with a title and format with blank spaces.

Geographic Location Section

- C State/County 'Lookup' onclick: Display a pop-up window showing the available counties for the state currently selected from the drop-down list. Populate the County Name(s) text area with the Counties that the user selects from the pop-up window.
- C HUC 'Lookup' onclick: Display a pop-up window showing all available HUC codes and their corresponding names. Populate the Cataloging Unit text box with the HUC code that the user selects from the pop-up window.

Characteristic Section

- C 'Search' onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.
- C 'Clear Selected' onclick: All selected characteristics are removed from the characteristic select list.
- C 'Clear All' onclick: All characteristics are removed from the characteristic select list.

Form Level

- C 'Continue' onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C 'Clear Form' onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for standard header and sidebar links on each page.
- C See DW_Bottom_of_Page Specifications for standard footer links on each page.

Images:

The only images used on the STORET Data Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C Only Organizations with Stations will be displayed.

- C If the user selects a list of characteristics, Stations will be displayed that have results corresponding to one or more of the characteristics from that list.
- C If the user selects 'All' State/Counties, every station is included in the search regardless of geographic location.
- C If the user selects 'All' HUCs, every station is included in the search regardless of geographic location.
- C If the user selects default latitude/longitude values (i.e., N=90, S=0, E=0, W=180), every station is included in the search regardless of geographic location.
- C If a list of Station Types is selected that includes 'Select All', all Station Types are included in the search.
- C If a list of Organizations is selected that includes 'Select All', all Organizations are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C The user will not be allowed to enter non-numeric characters in the latitude/longitude fields.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.
- An alert is displayed if the user attempts to perform a County look-up before selecting a State.
- The county field is reset to 'All' if the selected State is changed.

Page Print:

First half of page.

The screenshot shows the STORET Data Warehouse interface. At the top is the U.S. Environmental Protection Agency logo and the STORET title. Below the title is a search bar with a 'GO' button. A breadcrumb trail reads: EPA Home > Water > Wetlands, Oceans, & Watersheds > Monitoring and Assessing Water Quality > STORET > Data Warehouse. The main heading is 'Stations by Geographic Location'. Under this, the 'Geographic Location' section contains three radio buttons: 'State/County' (selected), 'Latitude/Longitude (in decimal degrees)', and 'Drainage Basin/HUC'. The 'State/County' section has dropdowns for 'State Name' (ALL) and 'County Name' (ALL), with a 'Look Up' button. The 'Latitude/Longitude' section has input fields for 'West Limit' (180), 'North Limit' (90), 'East Limit' (0), and 'South Limit' (0), each with a directional dropdown (W, N, E, S). The 'Drainage Basin/HUC' section has a 'Cataloging Unit' dropdown (ALL) and a 'Look Up' button. The 'Station Type' section has a heading 'Select one or more Station Type(s)' and a table with two columns: 'PRIMARY TYPE' and 'SECONDARY TYPE'. The table lists various station types, with 'Select All' highlighted in the primary type column. The 'Characteristic' section is partially visible at the bottom.

Geographic Location

Select a single type of location search that you wish to perform (state/county, latitude/longitude, or HUC). Then enter the corresponding search criteria.

☒ State/County

State Name: ALL County Name: ALL Look Up

☐ Latitude/Longitude (in decimal degrees)

West Limit: 180 North Limit: 90 East Limit: 0 South Limit: 0

☐ Drainage Basin/HUC

STORET Central Warehouse Specification

SIR: 1617

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Station_Criteria_STN (DW_Selection_Criteria_Station)

Web Page Name: Stations by Organization and Station ID

Processing Overview/Description:

The Stations by Organization and Station ID page is the second Station search page of the STORET Central Warehouse and provides three search areas: Organization/Station, Station Type, and Characteristic. A user is able to accept default values or enter specific selection criteria for each of these query dimensions. The user is able to select Stations from multiple Organizations, but is limited to selecting a maximum of 100 Stations per query. The user is able to select one or more Station Types and up to 50 Characteristics per query.

Tables Used:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Station Types (DI_STATN_TYPES)	PRIMARY_TYPE	Y
	SECONDARY_TYPE	Y
	PK_ISN	N
	SORT_ORDER	N
Organization (DI_ORG)	ORGANIZATION_ID	Y
	ORGANIZATION_NAME	Y
	PK_ISN	N

Links From:

Procedure	Web_Page	Button/Text
DW_Home	STORET: Central Warehouse	Stations by Organization and Station ID

Input Parameters:

These parameters are passed from the three Popup windows (DW_Extref_Popup, DW_Station_Popup and DW_Char_Alias_Popup) back to this procedure.

Natural Language	Parameter
The name of the selected Station Alias Type. By default this value is 'STANDARD'.	AS_EXTREF
The key of the selected Station Alias Type. By default this value is 0.	D_EXTREF_LIST
A Pl/Sql table of selected Stations (Station Key List). By default this value is 'DUMMY'.	STATION_LIST
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
A Pl/Sql table of selected Characteristics (Characteristic Key List). By default this value is 'DUMMY'.	CHAR_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_Extref_Popup	STORET: Select a Station Alias Type	Look Up
DW_Station_Popup	STORET: Station Search Results	Search Stations
DW_Char_Alias_Popup	STORET: Characteristic Search Results	Search
DW_Station_Count	Station Search Summary	Continue

Output Parameters:

Natural Language	Parameter
The name of the selected Station Alias Type. By default this value is 'STANDARD'.	AS_EXTREF
The key of the selected Station Alias Types. By default this value is 0.	D_EXTREF_LIST
The search string used to find Stations within the Organization. By default this value is 'DUMMY'.	AS_STATION
A Pl/Sql table of selected Stations (Station Key List). By default this value is 'DUMMY'.	STATION_LIST
The names of the selected Station(s) string separated by HTML break tags (). By default this value is NULL.	V_STATION_NAMES
A Pl/Sql table of selected Station Types (Station Type Key List).	D_STYPE_LIST
Flag to identify whether a user wishes to filter stations based on Characteristic.	CHARACTERISTIC
The names of the selected Characteristic(s) in a comma separated string.	V_CHAR_NAMES
The search string used to identify available Characteristics.	AS_CHAR
A Pl/Sql table of selected Characteristics (Characteristic Key List) .	CHAR_LIST
The type of Characteristic naming convention used for the Characteristic search.	AS_CHAR_ALIAS_TYPE
Boolean flag used to signal whether taxonomic names should be included in characteristic searches.	TAXON_FILTER
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST

Internal Procedure Events:**Onload**

- C Populate and format the Station Types list box with Primary and Secondary Station Type Names.

A-DW_Selection_Criteria_Station-3

- C Populate the Organization list box with Organization IDs and Names organized by Organization ID.
- C Populate the empty Selected Characteristics list box with a title and format with blank spaces.
- C Ensure that all selection criteria and hidden text fields are set to the appropriate default values.

Station Section

- C ‘Look Up’ onclick: Display a popup window showing the Station Alias Types that match the Organization selected by the user. If the user has not selected an Organization, display an alert message prompting them to do so. Populate the Station Alias Type display field with the Station Alias Type the user selects from the pop-up window.
- C ‘Search Stations’ onclick: Display a pop-up window showing the Stations that match the search string, search type, Station Alias Type, and Organization entered by the user. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Station listbox with the Stations the user selects from the pop-up window. No more than 100 Stations can be added to the Selected Stations list.
- C ‘Clear Selected’ onclick: All selected Stations are removed from the stations selected list.
- C ‘Clear All’ onclick: All Stations are removed from the stations selected list.

Characteristic Section

- C ‘Search’ onclick: Display a pop-up window showing the characteristics that match the search string and Search By choice entered by the user. The user may choose to hide or display taxonomic name characteristics by selecting the checkbox next to the search string textbox. If the user has not entered a search string, display an alert message prompting them to do so. Populate the Characteristics listbox with the characteristics the user selects from the pop-up window. No more than 50 Characteristics can be added to the Selected Characteristics list.
- C ‘Clear Selected’ onclick: All selected characteristics are removed from the characteristic select list.
- C ‘Clear All’ onclick: All characteristics are removed from the characteristic select list.

Form Level

- C ‘Continue’ onclick: The users inputs are validated and their selection criteria is passed to the next page of the web application for processing.
- C ‘Clear Form’ onclick: All values on the form are returned to their default values.

General

- C See DW_Top_of_Page Specifications for standard header and sidebar links on each page.
- C See DW_Bottom_of_Page Specifications for standard footer links on each page.

Images:

The only images used on the STORET Data Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only taxonomic characteristics that have been recorded will be displayed.
- C Characteristics can not be added to the Selected Characteristics list more than once (even if the same Characteristic is selected multiple times using different naming conventions).
- C The user may add no more than 50 Characteristics to the Selected Characteristics list. The attempted addition of Characteristics in excess of this limit are blocked and an alert is displayed.
- C If the user has selected an Organization but does not select any Stations, data for the selected Organization is retrieved for the report.
- C Stations can not be added to the Selected Stations list more than once.
- C If the user selects 'Search by Station Alias Type' but does not change the selected Station Alias Type (i.e., default of 'STANDARD'), then Stations will be searched by ID.
- C The user may add no more than 100 Stations to the Selected Stations list. The attempted addition of Stations in excess of this limit is blocked and an alert is displayed.
- C If the user selects a list of characteristics, Stations will be displayed that have results corresponding to one or more of the characteristics from that list.
- C If a list of Station Types is selected that includes 'Select All', all Station Types are included in the search.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C An alert is displayed if the user attempts to perform a Characteristic search before entering a search string.

STORET Central Warehouse Specification**SIR:** 1371, 1501, 1617, 1631,1633, 1706**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Station_Count**Web Page Name:** Station Search Summary**Processing Overview/Description:**

The Station Search Summary page receives and processes a user's search parameters from the two Station Search Criteria pages, displays a summary of this information, and provides a count of the number of Stations that satisfy the search criteria. Based on this count, a user is able to decide whether they wish to create a report or return to the Station Search Criteria page to refine their query. This page also allows a user to customize the reports they create by selecting the data elements they wish to include in their report. Based on the number of Stations, this procedure allows Online or Batch processing for the data request. The Batch processing can be both Immediate or Overnight. The limits that decide the range for different types of processing are enforced using global variables in DW_Glob_Var package.

If a report exceeds the maximum permitted number of Stations, the user is unable to generate a report and must refine their query. If there are no Stations for a report, the user is unable to generate a report and must refine their query.

Tables:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
State (DI_GEO_STATE)	STATE_NAME	Y
	PK_ISN	N
Station (FA_STATION)	LATITUDE	Y

DW_Station_Criteria_STN	Stations by Organization and Station ID	<Continue>

Input Parameters:

Natural Language	Parameter
Identifies the geographic location parameter being used for the search.	GEOGRAPHIC
The internal sequence number of the selected State.	AS_STATE

Natural Language	Parameter
The names of the selected County(s) in a comma separated string.	AS_COUNTY
The codes of the selected County(s) in a comma separated string.	V_COUNTY_CODE
The Northern Limit of a Latitude/Longitude query in decimal degrees.	MAX_LAT_DD
The Western Limit of a Latitude/Longitude query in decimal degrees.	MIN_LONG_DD
The Eastern Limit of a Latitude/Longitude query in decimal degrees.	MAX_LONG_DD
The Southern Limit of a Latitude/Longitude query in decimal degrees.	MIN_LAT_DD
The direction of the Northern Limit.	DIR_MAXLAT
The direction of the Southern Limit.	DIR_MINLAT
The direction of the Eastern Limit.	DIR_MAXLONG
The direction of the Western Limit.	DIR_MINLONG
The Hydrologic Unit Code value.	AS_HUC
A Pl/Sql table of selected Station Types (Station Type Key List).	D_STYPE_LIST
The names of the selected Characteristic(s) in a string separated by HTML break tags (). By default this value is NULL.	V_CHAR_NAMES
The search string used to identify available Characteristics. By default this value is NULL.	AS_CHAR
A Pl/Sql table of selected Characteristics (Characteristic Key List).	CHAR_LIST
The type of Characteristic naming convention used for the Characteristic search.	AS_CHAR_ALIAS_TYPE
Boolean flag used to signal whether taxonomic names should be included in characteristic searches.	TAXON_FILTER
The name of the selected Station Alias Type. By default this value is 'STANDARD'.	AS_EXTREF
The key of the selected Station Alias Types. By default this value is 0.	D_EXTREF_LIST

Natural Language	Parameter
The search string used to find Stations within the Organization. By default this value is 'DUMMY'.	AS_STATION
A Pl/Sql table of selected Stations (Station Key List). By default this value is 'DUMMY'.	STATION_LIST
The names of the selected Station(s) string separated by HTML break tags (). By default this value is NULL.	V_STATION_NAMES
A Pl/Sql table of selected Organizations (Organization Key List).	D_ORG_LIST2
The code of the last Organization selected for a Station search.	D_ORG_LIST

Links To:

Procedure	Web_Page	Button/Text
DW_Station_Criteria	Station Search Criteria	<Back>
DW_Station_Criteria_STN	Stations by Organization and Station ID	<Back>
DW_Station_Hub_Custom	Download Site Description	<Continue> when 'Download Report' is selected.

Output Parameters:

Natural Language	Parameter
The From clause of the SQL statement that will be used for selecting stations.	V_FROMSTMT
The Where clause of the SQL statement that will be used for selecting stations.	V_WHERESTMT
The Number of Stations meeting the selection criteria.	V_STATIONCOUNT
Search criteria used in the query. A tilde delimited string.	V_FILTERS

Natural Language	Parameter
Data request mode. Includes Online, Immediate or Overnight. Immediate and Overnight are batch processing	V_MODE
User provided email address for sending notifications.	V_EMAIL
User provided 3 letter string for report prefix.	V_PREFIX
A Pl/Sql table of selected Columns for the report (Column Name List).	V_COLUMNS
Identifies whether the user wants to generate a report or first display a list of available stations that match their search criteria.	REPORT_TYPE

Internal Procedure Events:

Onload

- C Display titles and values for the search criteria that the user selected on the previous page.
- C Display the number of Stations that match the search criteria that the user selected on the previous page.
- C Display the report elements that comprise the Station Details Report (defined in the APP_COLUMN_NAMES table).
- C Check the default report element check boxes (Organization ID, Station ID, Station Name, Primary Type, Latitude/Longitude, State Name, County Name).
- C Provide appropriate report generation mode based on the station count. The Online or Batch processing is displayed based on the limits set in DW_GLOB_VAR package.

Custom Report Section

- C 'Select All' onclick: Check all report element check boxes.
- C 'Clear All' onclick: Uncheck all report element check boxes.
- C 'Restore Defaults' onclick: Check only the default report elements.

Form Level

- C 'Continue>>' onclick: Call the procedure DW_Station_Download_Custom and pass it the processed Station search criteria (in the form of a SQL From clause and Where clause) and the list of columns that the user has selected for their report.

- C 'Immediate' Batch processing will schedule the request in a queue to be run immediately. This option requires an email address and a three character report prefix from user. Electronic mail will be sent upon successful submission of the request, and again upon completion of request.
- C 'Overnight' Batch processing will be stored and processed at off peak time and will be addressed overnight. This option requires an email address and a three character report prefix from user. Electronic mail will be sent upon successful submission of the request, and again upon completion of request.
- C '<<Back' onclick: Closes the page and returns to the selected Station Criteria page.

General

- C See DW_Top_of_Page Specifications for standard header and sidebar links on each page.
- C See DW_Bottom_of_Page Specifications for standard footer links on each page.

Images:

See General Design guidelines for standard images on each page. The only images used on the STORET Data Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

- C Only display location information for the geographic search option that has been selected (State/County, Latitude/Longitude, or HUC).
- C Always display the Station Types that have been selected. Display 'All' if the user has selected 'Select All' from the Station Type list.
- C Always display the Characteristics that have been selected. Display 'All' if the user has chosen not to filter stations based on Characteristic, or has not chosen specific Characteristics to search based upon.
- C Always display the Organizations that have been selected. Display 'All' if the user has selected 'All' from the Organization list.
- C Always display the Station(s) that have been selected. Display 'All' if the user has not chosen specific Stations to base search on.
- C Only display 'Continue' (online) when the station count is less than dw_glob_var.gv_stn_online_lmt.
- C Only display Batch Process with 'Immediate' and 'Overnight' options when the station count is between dw_glob_var.gv_stn_online_lmt and dw_glob_var.gv_stn_immediate_lmt.

- C Only display Batch Process with 'Overnight' option when the station count is between DW_GLOB_VAR.GV_STN_IMMEDIATE_LMT and DW_GLOB_VAR.GV_STN_OVERNIGHT_LMT
- C Do not provide any download option when station count is greater than DW_GLOB_VAR.GV_STN_OVERNIGHT_LMT.

Error Handling:

- C A standard Error Page should be displayed when this page is not loaded upon request.
- C An alert is displayed if the user attempts to generate a report without having at least one report element selected.
- C Enforces report size restrictions as handled by global variables.

STORET Central Warehouse Specification**SIR:** 1370, 1501, 1507, 1558, 1559, 1633, 1706**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Station_Download_Custom**Web Page Name:** None**Processing Overview/Description:**

The DW_Station_Download_Custom procedure receives processed search criteria, the list of requested report elements, mode of request and other related information from the DW_Station_Hub_Custom procedure. Records the request in DW_DATA_REQUEST table and generates a tilde delimited text file report for online requests. For Batch requests the request is submitted to the job queue and an email is sent to the requester. For online requests, the name of the text file is returned to DW_Station_Hub_Custom so that a link to the file can be displayed to the user. The created report contains only the columns that correspond to the report elements selected by the user. The titles for these columns are displayed as the first line of text in the report.

Tables:

Input Parameters:

Natural Language	Parameter
The From clause of the SQL statement that will be used for selecting stations.	V_FROMSTMT
The Where clause of the SQL statement that will be used for selecting stations.	V_WHERESTMT
A Pl/Sql table of selected Columns for the report (Column Name List).	V_COLUMNS
Used to pass a report file name to this procedure. This is set to 'NONE' for non-batched reports.	FILENAME
user email address required for Batch processing.	P_EMAIL
3 character string required for Batch processing.	P_PREFIX

Natural Language	Parameter
Request mode - Online/Immediate/Overnight. Immediate and Overnight are Batch processing.	V_MODE
Number of Stations .	P_RECORD_COUNT
Comma separated string of filters used in the query.	V_FILTERS
Request_ID of the request as recorded in DW_Data_Request table.	LV_REQUEST_ID

Links To:

Procedure	Web_Page	Button/Text
DW_Station_Hub_Custom	Download Site Descriptions	None (called automatically during load).
DW_Record_Data_Request	None	None (called automatically during load).

Output Parameters:

Natural Language	Parameter
The file name used for report generation. This is passed so that a link to the report can be created.	OUT_FILE
Job Request_ID. (Primary key in DW_DATA_REQUESTS table).	REQUEST_ID
Comma separated string of filters used in the query.	V_FILTERS
Used to pass a report file name to this procedure. This is set to 'NONE' for non-batched reports.	LV_FILETYPE
Timestamp of the request	LV_TIMESTAMP
Download file length.	LV_FILE_LENGTH
Record Title for the download.	V_PRINT_NAMES_LIST
Request Mode (Online/Immediate/Overnight. The later two are Batch processing).	V_MODE
User provided email address	P_EMAIL

Natural Language	Parameter
Complete SQL statement of the request query	V_SQLSTMT
filename of the download file name	LV_FILE_NAME
Number of records of the request.	P_RECORD_COUNT

Internal Procedure Events:**Onload**

- C Record the request into DW_DATA_REQUESTS table using DW_Record_data_request procedure..
- C For online request, generate report based on received parameters. Update the DW_DATA_REQUESTS table with the size of the file. Return file name to the calling procedure.
- C For Batch (Immediate) request, submit a job using DBMS_JOB and update dw_data_requests table with the job_queue_id. Send an email to user with Request_ID and return the Request_ID to calling procedure.
- C For Batch (Overnight) request, send an email to user with Request_ID and return the Request_ID to calling procedure. A scheduled job will run these jobs overnight.

Images:

None.

Business Rules:

- C Display Column Titles based on the report elements selected and the contents of the APP_COLUMN_NAME table. See chart below for a list of these titles.
- C Display only the columns that correspond to the list of selected report elements.
- C Separate all report columns with the tilde sign ('~').
- C Do not return the name of the report file created until report generation has completed.
- C Display report columns in the order listed below.
- C Include all location point types in station reports.

Column Title	Table Name	Column Name
Org ID	FA_STATION	ORGANIZATION_ID

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C Capture standard file creation (disk I/O) errors and display customized messages if they occur.

Page Print:

None. See DW_Station_Hub_Custom.

STORET Central Warehouse Specification**SIR:** 1557**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Station_Download_Zip**Web Page Name:** Download Site Descriptions**Process Overview/Description:**

The DW_Station_Download_Zip procedure takes a report download file and replaces it with a new report download file in gzip format. A link to this file is then presented to the requesting user.

Tables:

(Display Fields are listed in the order they are displayed)

None.

Links From:

Procedure	Web_Page	Button/Text
DW_Station_Hub_Custom	Download Site Descriptions	Continue

Input Parameters:

Natural Language	Parameter
The name of the report download file.	OUT_FILE

Links To:

Procedure	Web_Page	Button/Text
DW_Station_Download_Custom	Download Site Description	Called automatically when page is loaded.
DW_Station_Download_Zip	Create Report Download in Zip Format	Called when <Continue> button is pressed.

Output Parameters:

Natural Language	Parameter
The name of the report download file in gzip format.	OUT_FILE

Internal Procedure Events:**Onload**

- C Call DW_Exec_OS Java procedure that executes the Unix cp command to make a copy of the OUT_FILE created by DW_Station_Download_Custom.
- C Call DW_Exec_OS Java procedure that executes the Unix gzip command to make a gzip formatted version of the copy file. Display a link to the gzip format report file.
- C Display the size of the gzip format report file in kilobytes (KB) if the file has been created.

General

- C See DW_Top_of_Page Specifications for standard header and sidebar links on each page.
- C See DW_Bottom_of_Page Specifications for standard footer links on each page.

Images:

See General Design guidelines for standard images on each page. The only images used on the STORET Data Warehouse web site are those that are included in the EPA Standard Web Template.

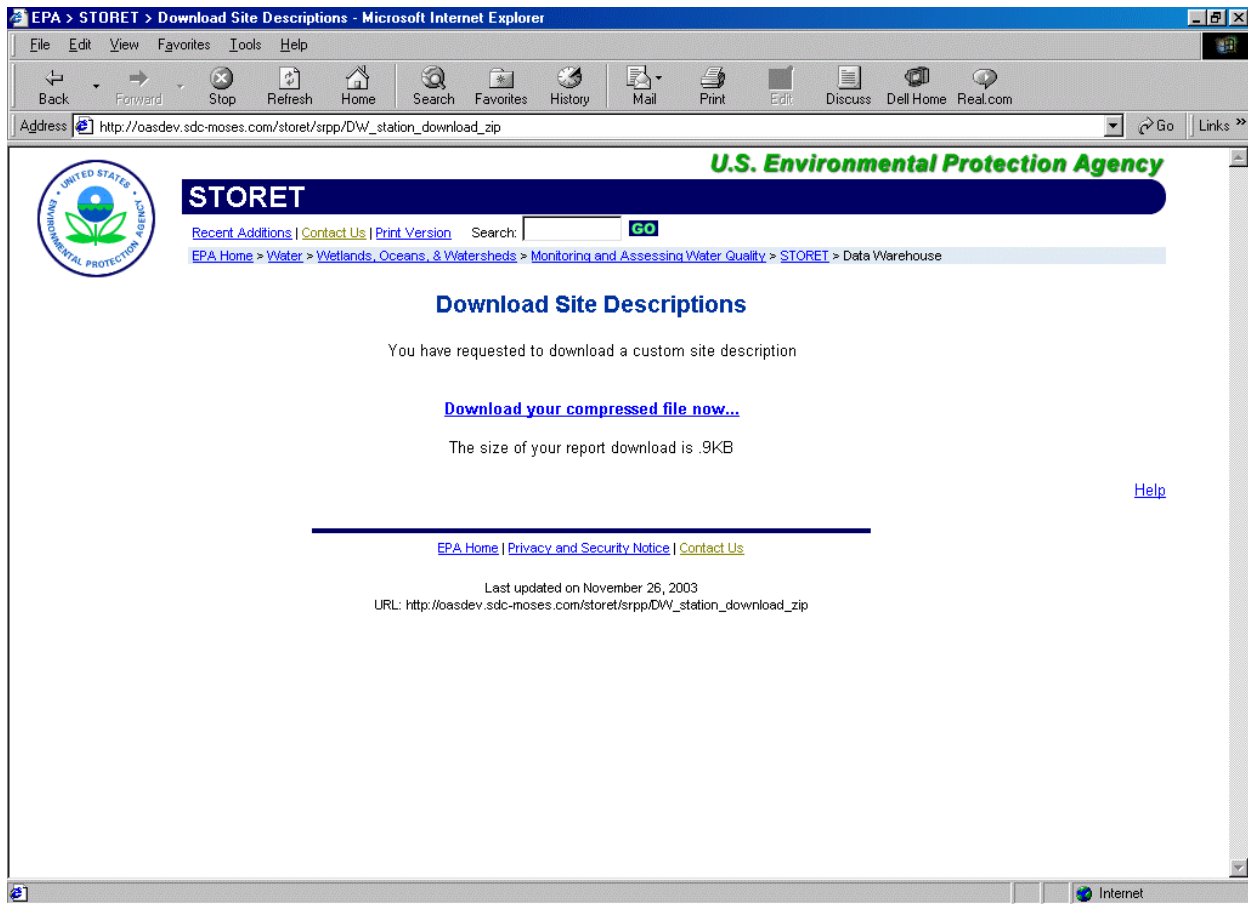

Business Rules:

None.

Error Handling:

- If the attempt to gzip the report download file is unsuccessful, an error message will be displayed rather than a link to the gzip format report file.
- A standard Error Page should be displayed when this page is not loaded upon request.

Page Print:

A-DW_Station_Download_Zip-4

STORET Central Warehouse Specification**SIR:** 1370, 1378, 1557, 1631, 1633**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Station_Hub_Custom**Web Page Name:** Download Site Descriptions**Process Overview/Description:**

The DW_Station_Hub_Custom procedure serves as a gatekeeper that generates the page header and footer, then executes the procedure DW_Station_Download_Custom with the required parameters. This also provides a link to compress the data file for online processing. For Batch processing, it provides the data request submission information.

Tables:

(Display Fields are listed in the order they are displayed)

None.

Links From:

Procedure	Web_Page	Button/Text
DW_Station_Count	Station Search Summary	Continue

Input Parameters:

Natural Language	Parameter
The From clause of the SQL statement that will be used for selecting stations.	V_FROMSTMT

Natural Language	Parameter
The Where clause of the SQL statement that will be used for selecting stations.	V_WHERESTMT
The number of Stations that fulfilled the selection criteria.	V_STATIONCOUNT
A Pl/Sql table of selected Columns for the report (Column Name List).	V_COLUMNS
Search criteria used in the query. A tilda delimited string.	V_FILTERS
Mode of data download request. Online, Immediate or Overnight. Immediate and Overnight are batch procesisng which requires an email address and a 3 letter prefix.	V_MODE
User email address provided on DW_STATION_COUNT page.	V_EMAIL
User provided 3 character string that will be used as prefix of the download filename. This is provided on DW_STATION_COUNT page.	V_PREFIX
Identifies whether the user wants to generate a report or first display a list of available stations that match their search criteria.	REPORT_TYPE
The file name used for report generation [This is passed from the report generating procedure (DW_STATION_DOWNLOAD_CUSTOM) back to this procedure after the report is complete.]	OUT_FILE

Links To:

Procedure	Web_Page	Button/Text
DW_Station_Download_Custom	Download Site Description	Called automatically when page is loaded.
DW_Station_Download_Zip	Download Site Description	Called when <Compress Data File now> button is clicked.

Output Parameters:

Natural Language	Parameter
The From clause of the SQL statement that will be used for selecting stations.	V_FROMSTMT
The Where clause of the SQL statement that will be used for selecting stations.	V_WHERESTMT
A Pl/Sql table of selected Columns for the report (Column Name List).	V_COLUMNS
Used to pass a file name to the report generating procedure (DW_STATION_DOWNLOAD_CUSTOM). This is set to 'NONE' for non-batched reports.	FILENAME
The name of the download data file created. Used to pass to procedure that will create the report download in gzip format. (DW_Station_Download_Zip)	OUT_FILE
Search criteria used in the query. A tilde delimited string.	V_FILTERS
Type of download or data request.	LV_FILETYPE
Time stamp of the download file.	LV_TIMESTAMP
Download file size in Kilobytes.	LV_FILE_LENGTH
Download request mode	V_MODE
Number of Stations selected	V_STATION_COUNT
Batch Request_id. Valid only for Immediate and Overnight V_MODE values.	LV_REQUEST_ID
User email address	LV_EMAIL
User provided 3 letter string	LV_PREFIX

Internal Procedure Events:**Onload**

- C Call DW_Station_Download_Custom and pass all the Output Parameters listed above except V_FILTERS, LV_FILETYPE, LV_TIMESTAMP and LV_FILE_LENGTH.

- C Display a link to the report file that is created using the value of OUT_FILE that is returned from DW_Station_Download_Custom.
- C Display the size of the report download file in kilobytes (KB).
- C Call dw_record_data_request and pass V_FILTERS, LV_FILETYPE, LV_TIMESTAMP and LV_FILE_LENGTH.
- C See DW_Station_Download_Custom for more details.

Form Level

- C 'Compress Data File now' onclick: Call the procedure DW_Station_Download_Zip and pass it the name of the report file that is to be created in gzip format.

General

- C See DW_Top_of_Page Specifications for standard header and sidebar links on each page.
- C See DW_Bottom_of_Page Specifications for standard footer links on each page.

Images:

See General Design guidelines for standard images on each page. The only images used on the STORET Data Warehouse web site are those that are included in the EPA Standard Web Template.

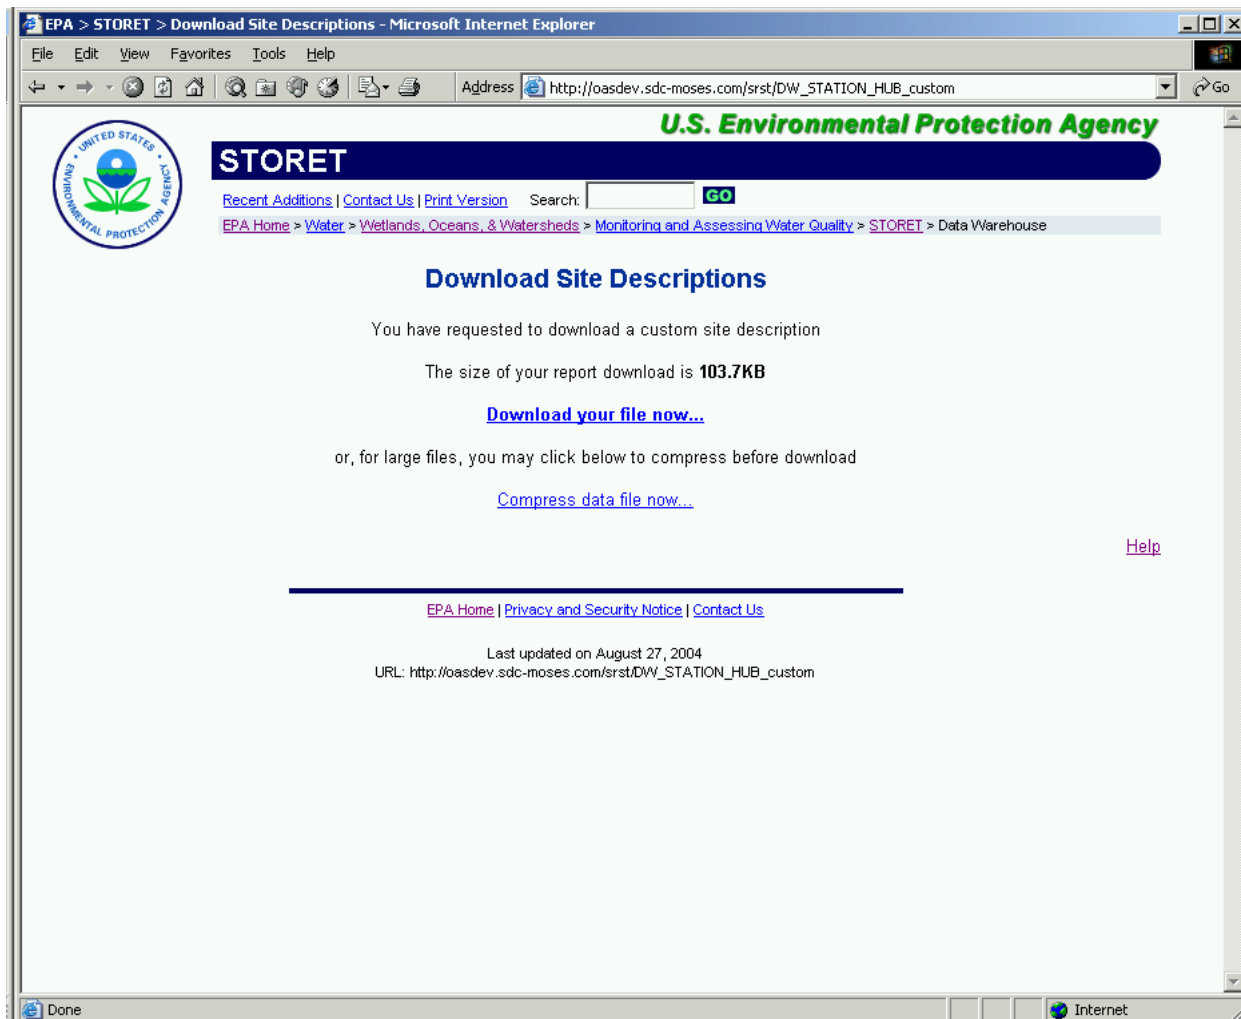

Business Rules:

None.

Error Handling:

- A standard Error Page should be displayed when this page is not loaded upon request.

Page Print:

STORET Central Warehouse Specification**SIR:** 1438, 1489**Package Name:** SDW (STORET Data Warehouse)**Procedure Name:** DW_Station_Popup**Web Page Name:** Station Search Results**Processing Overview/Description:**

The Station Search Results pop-up is called by the Result by Station pages and is used to display a list of available Stations for the selected Organization that conform to the user's search string. The user is able to select one or more Stations from this list. The Station ID and the Station Name of the selected Stations are passed to the calling Result by Station page where the appropriate fields are populated.

Tables:

(Display Fields are listed in the order they are displayed)

Entity	Attribute	Display
Station (FA_STATION)	ORGANIZATION_ID	Y
	STATION_ID	Y
	PK_ISN	N
	LOCATION_POINT_TYPE	N
	FK_ORG	N
Station Alias Type (LU_EXTERNAL_REF_SCHEME)	REF_SCHEME_ACRONYM	Y
	PK_ISN	N
	ORGANIZATION_ID	N
Station Alias (LU_STATION_ALIAS)	STATION_LABEL	Y

Entity	Attribute	Display
	FK_STATION	N
	FK_REF_SCHEME	N
Station (FA_STATION)	STATION_NAME	Y

Procedure	Web_Page	Button/Text
DW_Result_Criteria_Station	Regular Results by Station	Look Up
DW_Bio_Result_Criteria_Station	Biological Results by Station	Look Up
DW_Hab_Result_Criteria_Station	Habitat Results by Station	Look Up

Input Parameters:

Natural Language	Parameter
The text string used to search available Stations.	V_STATIONSTRING
The Organization number that uniquely identifies the selected Organization.	V_ORG
The code indicating whether to search for Stations by Station ID, Name, or Label.	V_SEARCHTYPE
The Station Alias Type used in the search for Station.	V_EXTREF

Procedure	Web_Page	Button/Text
DW_Result_Criteria_Station	Regular Results by Station	Look Up
DW_Bio_Result_Criteria_Station	Biological Results by Station	Look Up
DW_Hab_Result_Criteria_Station	Habitat Results by Station	Look Up

Output Parameters:

Natural Language	Parameter
A PL/SQL table of selected Stations.	STATION_LIST
The names of the selected Station(s) in a string separated by an HTML break.	V_STATION_NAMES

Internal Procedure Events:**Onload**

- C Populate the select list with the Stations that conform to the Station Search Criteria.

Form Level

- C 'Select' onclick: Populate the Selected Stations list on the calling Results by Station page with the Organization IDs, Station IDs, Alias Type, Station Alias, and Station names that the user selects from this pop-up window. If Stations were previously added, insert the new Stations at the end of the existing Selected Stations list.
- C 'Cancel' onclick: Close this pop-up window and return focus to the calling Results by Station page. Do not alter the value of the Selected Stations list.

Images:

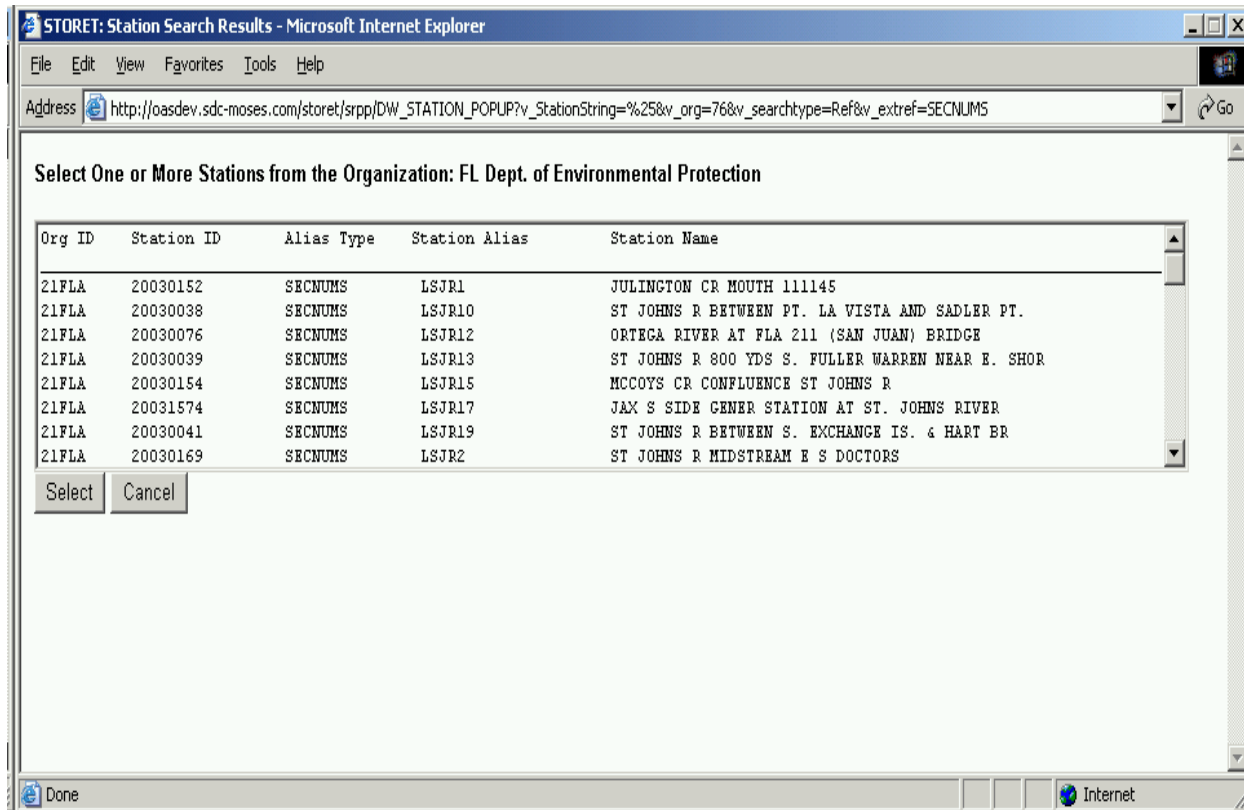

None.

Business Rules:

- C Only display Stations for the selected Organization.
- C Allow multiple Stations to be selected.
- C If 'Search by Station Alias' is selected and Station Alias Type is 'STANDARD', then Stations will be searched by Station ID.
- C If a Station is selected multiple times, include it only once on the calling Results by Station page.

Error Handling:

- C A standard Error Page should be displayed when this page does not load upon request.
- C Only valid Organization IDs, Station IDs, Station Alias Types, Station Aliases, and Station names are returned to the Results by Station page. If Search by ID or Search by Name is selected, then 'N/A' is used to indicate that the Station Alias Types and Station Aliases are not applicable.

STORET Central Warehouse Specification

SIR: Global

Package Name: SDW (STORET Data Warehouse)

Procedure Name: DW_Top_of_Page

Web Page Name: EPA standard web template header

Process Overview/Description:

The DW_Top_of_Page procedure is used to create the standard header used by all pages of the Central Warehouse application. This header provides a search engine for the EPA web site and several links. The search engine parameters and links used by this procedure mirror those of the STORET homepage.

In addition, this procedure establishes the link to the JavaScript library used by the application and calls any JavaScript functions that should be executed at the time a page is loaded.

Tables:

(Display Fields are listed in the order they are displayed)

None.

Output Parameters:

Natural Language	Parameter
script_path	The path of the application's JavaScript library file.
program_path	The path of the Oracle application server.
image_path	The path containing the application's image files.

Internal Procedure Events:**Onload**

- C Display the appropriate page Title.
- C Call the requested JavaScript functions.

Images:

The only images used on the STORET Data Warehouse web site are those that are included in the EPA Standard Web Template.

Business Rules:

None.

Error Handling:

- See specifications for the Web pages that call this procedure.

Page Print:

The DW_Top_of_Page procedure produces the standard header found at the top of the Central Warehouse's web pages.
