

Projection results by sector to produce inventories used in air quality modeling

These spreadsheets provide summaries of the impacts of the projection and control factors and closures for the 2016v3 platform.

Note: projection factors and results are not available for sectors for which emissions based on the output of models like EGUs, onroad and nonroad.

The following spreadsheets show impacts of the factors compiled by summarizing the Control Strategy Tool outputs. They include the pollutants CO, NH₃, NO_x, PM_{2.5}, PM₁₀, SO₂, and VOC:

2023gf_CoST_results_afdust_airports_cmv_livestock_rwc.xlsx

2023gf_CoST_results_nonpt_solvents_npoilgas_ptoilgas_ptnonipm.xlsx

The following spreadsheet shows the emissions impacts from closures newly added for 2023gf (emissions differences use the 2019 NEI as the basis for the impacts, not 2016):
