ICP-MS Data Review Checklist
Level I and Level II

Instrument ID (Circle one): **M01** (M02)			Method 6020 SOP SAC-MT-0001
File Number 110719A2	Batch Numbers 119519 3, 119618 0,	Date 7-19-11	Analyst SH

Lot Numbers: 61601044 1 , 61605041 2	YES	NO	NA
1. Copy of analysis protocol used included?	✓		
IS Recovery (Raw Data Value / Upload Data Value)	✓		
2. ICVs & CCVs within 10% of true value or recal and rerun?	✓		
3. ICB & CCBs < reporting limit or recal and rerun?	✓		
4. 10 samples or less analyzed between calibration checks?	✓		
5. All parameters within linear range?	✓		
6. LCS/LCSD within limits?	✓		
7. Prep blank value < reporting limit or all samples >20x blank?	✓		
8. Internal standard intensities for samples (unless followed by dilution) are > 30% and <120% of the Calibration Blank intensities?	✓		
9. Appropriate dilution factors applied to data?	✓		
10. Matrix spike and spike dup within customer defined limits?			✓
11. Each batch checked for presence of internal standard in samples?	✓		
12. Anomalies entered using Clouseau?			✓

COMMENTS: rerun 61605041 2 - MSD for all elements.

Signal Processing

Detector Mode:	Dual
Measurement Units:	counts

Report Date/Time: Wednesday, July 20, 2011 10:22:49
Page 1

AutoLens:	On
Spectral Peak Processing:	Average
Signal Profile Processing:	Average
Blank Subtraction:	Subtracted after internal standard
Baseline Readings:	0
Smoothing:	Yes, Factor 5

ICP-MS Data Review Checklist
Level I and Level II

Instrument ID (Circle one): **M01** (**M02**)		Method 6020 SOP SAC-MT-0001	
File Number 110720A2	Batch Numbers 119618O, 1200151, 1200152	Date 7/20/11	Analyst SH/BRJ

Lot Numbers G1G050412, G1G060477, G1G150408	YES	NO	NA
1. Copy of analysis protocol used included?	✓		
IS Recovery — Raw Data Value / Upload Data Value			
2. ICVs & CCVs within 10% of true value or recal and rerun?	✓		
3. ICB & CCBs < reporting limit or recal and rerun?	✓		
4. 10 samples or less analyzed between calibration checks?	✓		
5. All parameters within linear range?	✓		
6. LCS/LCSD within limits?	✓		
7. Prep blank value < reporting limit or all samples >20x blank?	✓		
8. Internal standard intensities for samples (unless followed by dilution) are > 30% and <120% of the Calibration Blank intensities?	✓		
9. Appropriate dilution factors applied to data?	✓		
10. Matrix spike and spike dup within customer defined limits?	✓		
11. Each batch checked for presence of internal standard in samples?	✓		
12. Anomalies entered using Clouseau?	✓

Preparation Data Review Checklist

Prep Batch(es) 1196180 Test: 6020

Prep Date: 7/15/11 Holding Times: 12/29/14 NCM: Y (N)

A. Spike Witness/Batch setup	Spike Witness	Reviewer
1. **Holding times checked?** NCMs filed as appropriate	✓	✓
2. QAS checked for QC instructions (LCS, LCSD, MS,MSD, etc)	✓	✓
3. Amount of samples in hood match amount of samples on bench sheet. Sample IDS match.	✓	NA
4. Worksheets have been checked for required spiking compounds	✓	✓
5. Spiking volumes are correctly documented	✓	✓
6. Std ID numbers on spike labels match numbers on bench sheet	✓	NA
7. Expiration dates have been checked	✓	✓
8. Calibration expiration dates on pipettors have been checked	✓	NA
9. Spiker and spike witness have signed and dated bench sheet	✓	✓
B. Weights and Volumes		
1. Recorded weights are in anticipated range	NA	NA
2. Balance upload or raw data for weights is included	NA	NA
3. Weights and volumes have been transcribed correctly to LIMS.	NA	✓
4. Weights are not targeted to meet exact weights.	NA	NA
5. Each weight or volume measurement is a unique record (no dittos or line downs)	NA	✓
C. Standards and Reagents		
1. Lot numbers for all reagents, including clean up stages, are recorded.	NA	✓
2. Are dates and analysts for cleanups recorded?	NA	NA
3. Are correct IDs used for standards? Are expiration dates to day/month/year, when listed?	NA	✓
D. Documentation		
1. Are all nonconformances documented appropriately?	NA	NA
2. QuantIMs entry correct, including dates and times.	NA	✓
3. Are all fields completed?	NA	✓

	3M HNO_3	In-House			1:1 HCl	In-House	

ICP matrix spike and LCS: For final volumes of 100ml, add 1mL from bottles ICP Part 1, ICP Part 2. Add 1ml of Silica (Si) when requested.
ICPMS matrix spike and LCS: For final volumes of 100ml, add 0.2 mL each of TACA-1 and TACA-2.
Amount to spike is as listed above for final volumes of 100ml. If a different final volume is used, increase or decrease the amount you spike proportionally.

Preparation Data Review Checklist

Prep Batch(es) 195192, 195193 Test: 6020

Prep Date: 7/14/11 Holding Times: 12/29/11 NCM: Y (N)

A. Spike Witness/Batch setup	Spike Witness	Reviewer
1. **Holding times checked?** NCMs filed as appropriate	✓	✓
2. QAS checked for QC instructions (LCS, LCSD, MS,MSD, etc)	✓	✓
3. Amount of samples in hood match amount of samples on bench sheet. Sample IDS match.	✓	NA
4. Worksheets have been checked for required spiking compounds	✓	✓
5. Spiking volumes are correctly documented	✓	✓
6. Std ID numbers on spike labels match numbers on bench sheet	✓	NA
7. Expiration dates have been checked	✓	✓
8. Calibration expiration dates on pipettors have been checked	✓	NA
9. Spiker and spike witness have signed and dated bench sheet	✓	✓
B. Weights and Volumes		
1. Recorded weights are in anticipated range	NA	NA
2. Balance upload or raw data for weights is included	NA	NA
3. Weights and volumes have been transcribed correctly to LIMS.	NA	✓
4. Weights are not targeted to meet exact weights.	NA	NA
5. Each weight or volume measurement is a unique record (no dittos or line downs)	NA	✓
C. Standards and Reagents		
1. Lot numbers for all reagents, including clean up stages, are recorded.	NA	✓
2. Are dates and analysts for cleanups recorded?	NA	NA
3. Are correct IDs used for standards? Are expiration dates to day/month/year, when listed?	NA	✓
D. Documentation		
1. Are all nonconformances documented appropriately?	NA	NA
2. QuantIMs entry correct, including dates and times.	NA	✓
3. Are all fields completed?	NA	✓

PARTICULATE ANALYSIS

LEVEL 1 & 2 REVIEW CHECKLIST

LAB NUMBERS: G1G050412-1, 3, 5, 7 filter Batch #: 1193194

ANALYSIS: (circle) TSP/PM10 or METHOD 5

DATE: 7/12/11 ANALYST: S Valmores

LEVEL 1 ANALYSIS REVIEW	YES	NO	NA
1. Samples are in good condition.	✓		
2. Sample filter number matches the folder or petri ID number.	✓		
3. Desiccator temperature and % humidity criteria in control.	✓		
4. Balance calibration criteria met.	✓		
5. Beginning and ending calibration sample bracket weights are in calibration.	✓		
6. Samples reached stable weight.	✓		
7. Samples exceeded 5 consecutive final weighings.			✓
LEVEL 1 DATA REVIEW			
1. Benchsheet is complete.	✓		
2. QAS or QAPP consulted and followed for client specifics.	✓		
3. Data entered in properly.	✓		
4. Copy of spreadsheet or logbook raw data entry attached to data package.	✓		
5. Analyst observations, HTV's, Anomalies properly documented and attached to data package.			✓

Completed By & Date: S Valmores 7/12/11

LEVEL 2 REVIEW:			
1. Level 1 checklist complete and verified.	✓		
2. Deviations, Anomalies, Holding times checked and approved.			✓
3. Reanalysis documented and chemist notified.			✓
4. Client specific criteria met.	✓		
5. Data entry checked and released in Quantims.	✓		
6. Indication on benchsheet or spreadsheet on review and released (dated & signed).	✓		

Completed By & Date: MAT 7/14/11

0.2000	0.2000	0.1995	0.2005	10.0000	10.0008	9.9000	10.1000	6/21/11	SV	QA-11	P

1 P= Pass, F= Fail. The observed weight must be with in the listed tolerances in order to pass. If calibration check values fall outside acceptance limits, the balance is considered to be out of calibration.
a) Do not move or use the balance
b) Attach a sign instructing others not to use the balance (see front of logbook).
c) Notify the QA department.

*2 Balance Tolerances (grams):

Denomination	Range	Denomination	Range
0.2000	0.1995 – 0.2005	10	9.9000 – 10.100
0.5000	0.4995 – 0.5005	20	19.8000 – 20.200
1	0.9900 – 1.0100	50	49.5000 – 50.500
2	1.9800 – 2.0200	100	99.0000 – 101.000
5	4.9500 – 5.0500		

Calibration range is (+/-) 1% for top loading balances. The above tolerances have been rounded to meet balance read out capability.

*3 When performing Method 1664A, the following Class 1 weights and tolerances must be used (in grams).

Denomination	Range
0.0020	0.0018 – 0.0022
1	0.9950 – 1.0050

Calibration range is (±) 10% for 2 mg weight and (±) 0.5% for 1 g weight. The above tolerances have been modified to meet balance read out capability.

PARTICULATE ANALYSIS

LEVEL 1 & 2 REVIEW CHECKLIST

LAB NUMBERS: G1G050412-1,3,5,7 Acetone Batch #: 1193197

ANALYSIS: (circle) TSP/PM10 or (METHOD 5)

DATE: 7/12/11 ANALYST: [signature]

LEVEL 1 ANALYSIS REVIEW	YES	NO	NA
1. Samples are in good condition.	✓		
2. Sample filter number matches the folder or petri ID number.			✓
3. Desiccator temperature and % humidity criteria in control.	✓		
4. Balance calibration criteria met.	✓		
5. Beginning and ending calibration sample bracket weights are in calibration.	✓		
6. Samples reached stable weight.	✓		
7. Samples exceeded 5 consecutive final weighings.			✓
LEVEL 1 DATA REVIEW			
1. Benchsheet is complete.	✓		
2. QAS or QAPP consulted and followed for client specifics.	✓		
3. Data entered in properly.	✓		
4. Copy of spreadsheet or logbook raw data entry attached to data package.	✓		
5. Analyst observations, HTV's, Anomalies properly documented and attached to data package.			✓

Completed By & Date: [signature] 7/12/11

LEVEL 2 REVIEW:			
1. Level 1 checklist complete and verified.	✓		
2. Deviations, Anomalies, Holding times checked and approved.			✓
3. Reanalysis documented and chemist notified.			✓
4. Client specific criteria met.	✓		
5. Data entry checked and released in Quantims.	✓		
6. Indication on benchsheet or spreadsheet on review and released (dated & signed).	✓		

Completed By & Date: MMT 7/14/11

Method 301 Validation
Formaldehyde (H2CO)

Formaldehyde: 301 Validation by Dynamic Analyte Spiking (biases taken into account)

Spiking Data

Total tracer conc. (ppm):	17.231
tracer conc. while line spiking (ppm):	0.639
Percentage of native exhaust in total spiked sample:	0.963
Certified cylinder conc. of analyte (ppm):	29.4
Conc. of analyte spiked into extracted exhaust (ppm):	1.090

Validation Data (conc. in ppm)

		Analyte Concentrations					Tracer Concentrations	
	Pair #	Unspiked Native Conc.	Corr. Native Conc.	Native + Spiked Conc.	Native + Spiked (meas.)	% Recovery	SF6 unspiked	SF6 spiked
	1	0.334	0.322	1.412	1.305	92.427	-0.004	0.685

	12	0.213	0.205	1.295	1.116	86.161	-0.002	0.633
Mean Conc.:		0.255	0.245	1.335	1.181	88.424	-0.002	0.637

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	1.1809	
Mean of FTIR meas. unspiked samp:	0.2545	
CS Calculated value of Spiked Samples:	1.3353	
SD St.Dev of spiked samples Eq 301-2:	0.0644	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.0186	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**0.0545**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	-0.1544	
t-statistic, Eq. 301-4:	**8.3126**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	**0.1157**	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	**1.1308**	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Method 301 Validation
Acetaldehyde

Acetaldehyde: Validation by Dynamic Analyte Spiking (biases taken into account)

Spiking Data

Total tracer conc. (ppm):	16.787	
tracer conc. while line spiking (ppm):	0.387	
Percentage of native exhaust in total spiked sample:	0.977	
Cylinder conc. of analyte (ppm):	90.441	Dir Injection
Conc. of analyte spiked into extracted exhaust (ppm):	2.083	

Validation Data (conc. in ppm)

		Analyte Concentrations					Tracer Concentrations			
	Pair #	Unspiked Native Conc.	Corr. Native Conc.	Native + Spiked Conc.	Native + Spiked (meas.)	% Recovery	SF6 unspiked		SF6 spiked	
	1	-0.586	-0.572	1.511	1.261	83.428		-0.010		0.406
	2	-0.629	-0.614	1.469	1.374	93.511		-0.010		0.415

	11	-0.608	-0.594	1.489	1.023	68.708		-0.008		0.350
	12	-0.696	-0.679	1.404	1.099	78.303		-0.006		0.350
Mean Conc.:		-0.659	-0.644	1.439	1.154	80.183		-0.009		0.378

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	1.1543	
Mean of FTIR meas. unspiked samp:	-0.6590	
CS Calculated value of Spiked Samples:	1.4395	
SD St.Dev of spiked samples Eq 301-2:	0.1394	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.0403	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**0.1208**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	-0.2852	
t-statistic, Eq. 301-4:	**7.0845**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	**0.1981**	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	**1.2471**	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	1.3812	
Mean of FTIR meas. unspiked samp:	-0.2051	
CS Calculated value of Spiked Samples:	1.5077	
SD St.Dev of spiked samples Eq 301-2:	0.0490	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.0141	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**0.0355**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	-0.1265	
t-statistic, Eq. 301-4:	**8.9455**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	**0.0839**	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	1.0916	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Method 301 Validation
Acetonitrile

Acetonitrile: Validation by Dynamic Analyte Spiking (biases taken into account)

Spiking Data

Total tracer conc. (ppm):	20.121
tracer conc. while line spiking (ppm):	0.757
Percentage of native exhaust in total spiked sample:	0.962
Certified cylinder conc. of analyte (ppm):	19.9
Conc. of analyte spiked into extracted exhaust (ppm):	0.749

Validation Data (conc. in ppm)

	Pair #	Analyte Concentrations: Unspiked Native Conc.	Corr. Native Conc.	Native + Spiked Conc.	Native + Spiked (meas.)	% Recovery	Tracer Concentrations: C2Cl4 unspiked		C2Cl4 spiked	
	1	2.314	2.227	2.976	-0.827	-27.795		0.068		0.794

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	0.1855	
Mean of FTIR meas. unspiked samp:	0.2049	
CS Calculated value of Spiked Samples:	0.9464	
SD St.Dev of spiked samples Eq 301-2:	0.9787	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.2825	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**5.2748**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	-0.7608	
t-statistic, Eq. 301-4:	2.6930	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	0.8039	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	**5.1006**	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	1.1635	
Mean of FTIR meas. unspiked samp:	0.2582	
CS Calculated value of Spiked Samples:	1.0014	
SD St.Dev of spiked samples Eq 301-2:	0.0384	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.0111	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**0.0330**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	0.1621	
t-statistic, Eq. 301-4:	**14.6341**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	**0.1619**	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	**0.8607**	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	0.5453	
Mean of FTIR meas. unspiked samp:	-0.1915	
CS Calculated value of Spiked Samples:	0.5912	
SD St.Dev of spiked samples Eq 301-2:	0.0755	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.0218	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**0.1384**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	-0.0460	
t-statistic, Eq. 301-4:	**2.1098**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	0.0777	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	1.0843	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	0.6655	
Mean of FTIR meas. unspiked samp:	-0.0083	
CS Calculated value of Spiked Samples:	0.7826	
SD St.Dev of spiked samples Eq 301-2:	0.0319	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.0092	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**0.0480**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	-0.1171	
t-statistic, Eq. 301-4:	**12.7053**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	**0.1497**	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	**1.1760**	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Method 301 Validation
Hydrogen Cyanide (HCN)

Hydrogen cyanide: Validation by Dynamic Analyte Spiking (biases taken into account)

Spiking Data

Total tracer conc. (ppm):	16.964
tracer conc. while line spiking (ppm):	1.636
Percentage of native exhaust in total spiked sample:	0.904
Certified cylinder conc. of analyte (ppm):	118.310
Conc. of analyte spiked into extracted exhaust (ppm):	11.408

Validation Data (conc. in ppm)

Method 320/301 Analyte Spiking Statistical Results

Mean of FTIR meas. spiked samples:	35.2415	
Mean of FTIR meas. unspiked samp:	27.9002	
CS Calculated value of Spiked Samples:	36.6178	
SD St.Dev of spiked samples Eq 301-2:	1.7760	also Eq 301-5 in 2011 version of m301
SDM = SD/sqrt(12)	0.5127	
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD
SD_{pooled}-pooled std. dev.:	NA	
RSD:	**0.0504**	RSD must be <= 0.20 for successful validation
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation
B-bias at spike level m320 Eq. 7:	-1.3763	
t-statistic, Eq. 301-4:	**2.6845**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)
Br, Relative Bias Eq. 301-7 (2011 ver):	**0.0376**	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful
CF-correction factor Eq. 301-5 (pre-2011):	1.0391	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

Mean Conc.:		1.080	1.046	4.106	3.831	93.308		0.013		0.777
Method 320/301 Analyte Spiking Statistical Results										
Mean of FTIR meas. spiked samples	3.8310									
Mean of FTIR meas. unspiked samp	1.0802									
CS Calculated value of Spiked Samples:	4.1062									
SD St.Dev of spiked samples Eq 301-2:	0.0414	also Eq 301-5 in 2011 version of m301								
SDM = SD/sqrt(12)	0.0120									
F-test:	0.0833	For n=6, if 0.139<F<7.146, calculate pooled SD								
SD_{pooled}-pooled std. dev.:	NA									
RSD:	**0.0108**	RSD must be <= 0.20 for successful validation								
RSD, if using pooled SD:	NA	RSD must be <= 0.50 for successful validation								
B-bias at spike level m320 Eq. 7:	-0.2752									
t-statistic, Eq. 301-4:	**23.0233**	if t-stat.>=2.201 (11 degrees of freedom), then B is statistically significant must calc. and use CF (also Eq 301-6 in 2011 version of m301)								
Br, Relative Bias Eq. 301-7 (2011 ver)	**0.0670**	If < 0.1 the CF not required (CF=1) if Br>0.3 then validation is unsucessful								
CF-correction factor Eq. 301-5 (pre-2011):	1.0718	if 0.7<=CF<=1.3 or if B not statistically signif., then validation successful

MKM8D	021	CHV-STK-ICR4-OH-PERM	06/26/11	17:00

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

PROJECT NARRATIVE
H1G050441 – Revised August 23, 2011

Revision notes

This report was revised per client request to include additional analyses for the KMnO4 fractions of the Ontario Hydro Hg trains received.

The results reported herein are applicable to the samples submitted for analysis only. If you have any questions about this report, please call (865) 291-3000 to speak with the TestAmerica project manager listed on the cover page.

This report shall not be reproduced except in full, without the written approval of the laboratory.

Sample Receipt

Custody seals were not present.

Samples CHV-Stk-ICRRB-OH-Water, CHV-Stk-ICRRB-OH 10% NA, and CHV-Stk-ICRRB-OH-HA were not received, but were listed on the chain of custody documentation.

Quality Control and Data Interpretation

Unless otherwise noted, all holding times and QC criteria were met and the test results shown in this report meet all applicable NELAC requirements.

These stack gas samples were prepared and analyzed using TestAmerica Knoxville standard operating procedure KNOX-IP-0006 which is based on ASTM Method D6784-02, "Standard Test Method for Elemental, Oxidized, Particle-Bound and Total Mercury in Flue Gas Generated from Coal-Fired Stationary Sources (Ontario Hydro Method)" with modifications from EPA Method 29. SW-846 Method 7470A, as incorporated in TestAmerica Knoxville standard operating procedure KNOX-MT-0009, was used to perform the final instrument analysis.

Thimbles were received instead of filters for the front half samples. Each thimble was divided in half because the digestion vessels are not large enough for the entire thimble. Acid digestion was performed on each half of the front half particulate thimbles and the nitric acid probe rinse fractions separately using HNO_3, HCl and HF. Heating was done by microwave. After digestion, the probe rinse digestate was combined with one of the thimble fractions. For each of the two digestates, the HF was sequestered using H_3BO_3 followed by another microwave cycle, and the final volume for each was adjusted to 100 mL. These digestates were combined (total volume of 200 mL) and a portion was digested for CVAA analysis in order to determine the particle-bound mercury. Results were calculated using the following equation:

TestAmerica Knoxville maintains the following certifications, approvals and accreditations: Arkansas DEQ Lab #88-0688, California ELAP Cert. #2423, Colorado DPHE, Connecticut DPH Lab #PH-0223, DoD ELAP Cert. #ADE-1434, Florida DOH Lab #E87177, Georgia DNR Lab #906, Hawaii DOH, Indiana DOH Lab #C-TN-02, Iowa DNR Lab #375, Kansas DHE Cert. #E-10349, Kentucky EEC Lab #90101, Louisiana DEQ AI# 83979 Cert. #03079, Louisiana DOHH, Maryland DOE Cert #277, Michigan DNRE Lab #9933, Minnesota DOH ELAP Lab #047-999-429, Nevada DEP Lab #TN00009, New Jersey DEP Lab #TN001, New York DOH Lab #10781, North Carolina DHHS Lab #21705, North Carolina DENR Cert. #64, Ohio EPA VAP Lab #CL0059, Oklahoma DEQ Lab #9415, Pennsylvania DEP Lab #68-00576, South Carolina DHEC Cert #84001001, Tennessee DEC Lab #02014, Texas CEQ, Utah DOH Lab # QUAN3, Virginia DGS Lab #00165, Washington DOE Lab #C593, West Virginia DEP Cert. #345, West Virginia DHHR Cert #9955C, Wisconsin DNR Lab #998044300, and USDA Soil Permit #P330-11-00035. This list of approvals is subject to change and does not imply that laboratory certification is available for all parameters reported in this environmental sample data report.

PROJECT NARRATIVE
H1G050441 – Revised August 23, 2011

$$\text{Hg, ug} = (\text{Hg, ug/L}) * (\text{Micr. Digestate Volume, L}) * \left(\frac{\text{Final Volume Hg Digestate (mL)}}{\text{Volume Micr. Digestate Used (mL)}} \right) * \text{Bench Dilution}$$

Please note that the dilution factor reported on the sample result form for the front half samples is actually a combination of preparation factors and bench dilution factors.

For the 5%HNO_3/10%H_2O_2 impinger samples, a 10 milliliter portion of the sample as received was processed for mercury. The KCl and 4% $KMnO_4$/10%H_2SO_4 impinger samples were treated with hydroxylamine hydrochloride, followed by removal of a 25 mL portion of sample for mercury processing. Results were calculated using the equation listed below. For the KCl and 4% $KMnO_4$/10%H_2SO_4 impinger samples, the sample volume includes the volume of hydroxylamine hydrochloride added to the sample.

$$\text{Hg, ug} = (\text{Hg, ug/L}) * (\text{Sample Volume, L}) * \left(\frac{\text{FinalVolume Hg Digestate (mL)}}{\text{Volume Sample Digested (mL)}} \right) * \text{Bench Dilution}$$

Please note that the dilution factor reported on the sample result form for the back half impingers is actually the combination of preparation factors (not just a dilution factor) required by the method to convert the Hg reporting limits and method detection limits in concentration units from ug/L to a total ug unit:

$$\text{DilutionFactor} = (\text{Volume, L}) * \left(\frac{\text{FinalVolume Hg Digestate (mL)}}{\text{Volume Sample Digested (mL)}} \right) * \text{Bench Dilution}$$

The matrix spike/matrix spike duplicate recoveries for sample CHV-STK-ICR3-OH-PERM were outside control limits for mercury. However, the laboratory control samples showed acceptable results indicating that the analysis was in control. The matrix spike/matrix spike duplicate results are, therefore, attributed to matrix effects. The affected analytes are flagged appropriately on the matrix spike/matrix spike duplicate report. A post digestion spike/post digestion spike duplicate was analyzed on CHV-STK-ICR3-OH-PERM with acceptable recoveries.

Added – August 23, 2011

After discussions on 08/19/11with the client about the poor matrix spike recoveries on sample CHV-STK-ICR3-OH-PERM, a decision was made to re-digest using less sample volume in an attempt to lessen any possible matrix interferences and reanalyze the four permanganate impingers associated with this lot. The reanalysis on these samples was done outside the 45 day holding time for mercury. The matrix spike/matrix spike duplicate recoveries for sample CHV-STK-ICR3-OH-PERM were within control limits for mercury on the reanalysis done on 08/22/11. Both sets of data have been incorporated into this revised data package.

TESTAMERICA KNOXVILLE SAMPLE RECEIPT/CONDITION UPON RECEIPT ANOMALY CHECKLIST

Lot Number: _____

Review Items	Yes	No	NA	If No, what was the problem?	Comments/Actions Taken
1. Do sample container labels match COC? (IDs, Dates, Times)	✓			☐ **1a** Do not match COC ☐ **1b** Incomplete information ☐ **1c** Marking smeared ☐ **1d** Label torn ☐ **1e** No label ☐ **1f** COC not received ☐ **1g** Other:	4A 5B Did not receive samples: CHV-Stk-ICRRB-OH-water CHV-Stk-ICRRB-OH-10% NA CHV-Stk-ICRRB-OH-HA
2. Is the cooler temperature within limits? (> freezing temp. of water to 6 °C, VOST: 10°C)	✓			☐ **2a** Temp Blank = _____ ☐ **2b** Cooler Temp = _____ ☐ **2c** Cooling initiated for recently collected samples, ice present.	
3. Were samples received with correct chemical preservative (excluding Encore)?			✓	☐ **3a** Sample preservative =	
4. Were custody seals present/intact on cooler and/or containers?		✓		☐ **4a** Not present ☐ **4b** Not intact ☐ **4c** Other:	
5. Were all of the samples listed on the COC received?		✓		☐ **5a** Samples received-not on COC ☐ **5b** Samples not received-on COC	
6. Were all of the sample containers received intact?	✓			☐ **6a** Leaking ☐ **6b** Broken	
7. Were VOA samples received without headspace?			✓	☐ **7a** Headspace (VOA only)	
8. Were samples received in appropriate containers?	✓			☐ **8a** Improper container	
9. Did you check for residual chlorine, if necessary?			✓	☐ **9a** Could not be determined due to matrix interference	
10. Were samples received within holding time?	✓			☐ **10a** Holding time expired	
11. For rad samples, was sample activity info. provided?			✓	☐ Incomplete information	
12. For 1613B water samples is pH<9?			✓	If no, was pH adjusted to pH 7 - 9 with sulfuric acid? _____	
13. Are the shipping containers intact?	✓			☐ **13a** Leaking ☐ **13b** Other:	
14. Was COC relinquished? (Signed/Dated/Timed)	✓			☐ **14a** Not relinquished	
15. Are tests/parameters listed for each sample?	✓			☐ **15a** Incomplete information	
16. Is the matrix of the samples noted?	✓			☐ **15a** Incomplete information	
17. Is the date/time of sample collection noted?	✓			☐ **15a** Incomplete information	
18. Is the client and project name/# identified?	✓			☐ **15a** Incomplete information	
19. Was the sampler identified on the COC?		✓

Mercury Data Reporting Form

Instrument Detection Limits

Units: ug/L (ppb)

IDL Completion Date: 12/8/2010

Instrument ID: Leeman HydraAA Hg An

Data File Name: M082211.PRN

Element	Wavelength (nm)	Reporting Limit	IDL
Hg	253.70	0.2	0.06

TestAmerica Knoxville

Sample ID Nomenclature

The sample ID consists of 5 alpha-numeric characters followed by a suffix in the 6th position that designates the sample type:

Suffix	Sample Type:
B	Method Blank
C	Laboratory Control Sample
L	Laboratory Control Sample Duplicate
S	Matrix Spike
D	Matrix Spike Duplicate
X	Sample Duplicate
P	Serial Dilution
A	Post Digestion Spike
Z#	Dilution; # = Dilution Factor

Raw Data
Mercury

TestAmerica Knoxville
Mercury Analysis Cover Sheet

Analyst	DKW	**Instrument**	**Leeman Hydra AA Mercury Analyzer**
Run Date	7/16/11	**Chart Name**	M071611

Daily Maintenance		**As Needed Maintenance**	
☑	Check tubing.	☑	Adjust/change Hg lamp.
☑	Check maintenance schedule flags.	☐	Clean or replace optical cell.
		☐	Lubricate pump and autosampler arm.
		☐	Change the drying tube.

```

TestAmerica Knoxville Mercury Data Review Checklist

Method: Ontario-Hydro Method

Analyst:	DKW			Instrument:	Leeman Hydra AA Mercury Analyzer		
Run Date:	Jul-16-11	Calibration Number:	1	Chart Name:	m071611.prn	Element:	Hg

A. Calibration/Instrument Run QC	N/A	Yes	No	Comments
1. Instrument calibrated every 24 hours?		X		Calibration was 4 hours and 54 minutes long
2. Instrument calibrated using a minimum of a blank and 5 standards?		X		
3. Do standard absorbances increase as standard concentrations increase?		X		
4. Instrument calibrated with standards at the SOP levels?		X		
5. Correlation coefficient greater than or equal to 0.995?		X		Correlation coefficient was 0.9999
6. ICV analyzed directly after calibration?		X		
7. ICV within specified control limits?		X		
8. ICB analyzed immediately after ICV?		X		
9. ICB within acceptable range?		X		
10. CRA analyzed at the beginning of the run?		X		
11. CRA results within acceptable range?		X		
12. All CCV's within specified control limits?		X		
13. All CCB's within acceptable range?		X		
14. All CCB's analyzed immediately after CCV's?		X		
B. Client Sample and QC Sample Results				
1. Were all sample results within the linear range of the instrument ?		X		
2. Were there any samples with results more negative than Report Limit?		X		See Comments on Next Page
3. Were samples analyzed within the holding time?			X	MKKAC-05/ms/msD
C. Preparation/Matrix QC				
1. Was one method blank prepared for each batch?		X		
2. Were all method blanks less than the specified level?		X		
3. Was an LCS prepared for each batch?		X		
4. Were all LCS recoveries within QC limits?		X		
5. Were matrix spikes, sample duplicates and/or post-digestion spikes run at required frequency?		X		
6. Were all matrix spike recoveries within QC limits?			X	See Comments on Next Page
7. Were post-digestion spike recoveries within QC limits?				
8. Were duplicate RPDs within QC limits?		X		
D. Other				
1. Current IDL data on file?		X		
2. Current MDL data on file?		X		
3. Are all nonconformances documented appropriately?		X		
4. Were all project specific instructions followed?		X		NCM#: 08-0010400

Question Number:	Problem(s) Found:
B2	Sample MKWW2 at 7/16/2011 8:52:14 AM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW3 at 7/16/2011 8:54:11 AM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKMRXB at 7/16/2011 8:55:58 AM: Original sample is more negative than report limit. Dilute sample and re-analyze.

TestAmerica Knoxville Mercury Data Review Checklist

B2	Sample MKWW2Z5 at 7/16/2011 12:07:45 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW3Z5 at 7/16/2011 12:09:34 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW2Z10 at 7/16/2011 12:15:46 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW3Z10 at 7/16/2011 12:17:36 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW2Z20 at 7/16/2011 12:27:24 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW3Z20 at 7/16/2011 12:29:37 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW2Z100 at 7/16/2011 12:33:42 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW3Z100 at 7/16/2011 12:35:30 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
B2	Sample MKWW2Z100A at 7/16/2011 12:47:24 PM: Original sample is more negative than report limit. Dilute sample and re-analyze.
C6	Matrix spike sample MKM7TS at 7/16/2011 10:46:26 AM had 51% recovery.
C6	Matrix spike sample MKM7TD at 7/16/2011 10:48:14 AM had 43% recovery.
C6	Matrix spike sample MKNV0S at 7/16/2011 11:37:19 AM had ~~508.9~~ 101.8 % recovery. DKW 7/18/11

Analyst: DKW **Date:** 7/18/11

Analyst Comments: B2: MKWW2 AND MKWW3 WERE BOTH DILUTED AND REPORTED FROM A 1000 DILUTION DUE TO MATRIX INTERFERENCE. PDS/PDSD ANALYZED.
C6: MKM7T - RAN PDS/PDS DUPLICATE DUE TO POOR SPIKE RECOVERIES.
MKNV0S - SPIKED @ 5.0ppb - RECOVERY IS 101.78%

INTERMEDIATE STANDARD – Initial Verification Calibration (10 ppm)

Stock Std Name: ICP-080
Element: Hg
Stock Source: Ultra
Stock Std Lot #: K00200
Stock Std Expiration Date: 3/31/16
Stock Conc.: 1000 ppm
Acid Lot: J11045

Stock Vol (ml)/100ml: 1.0 ml
Date Prepared: 6/20/11
Expiration Date: 7/20/11
QC Check: M062111
Initials: DKW
Matrix: 2% HNO_3
Intermediate Standard ID: IVER4388-2
Pipet ID: MET-008

Mercury Analysis Cover Sheet

Analyst	KND	Instrument	Leeman Hydra AA Mercury Analyzer
Run Date	8/22/11	Chart Name	MD82211

Daily Maintenance		As Needed Maintenance	
☒	Check tubing.	☐	Adjust/change Hg lamp.
☒	Check maintenance schedule flags.	☐	Clean or replace optical cell.
		☐	Lubricate pump and autosampler arm.
		☐	Change the drying tube.

```

A. Calibration/Instrument Run QC	N/A	Yes	No	Comments
1. Instrument calibrated every 24 hours?		X		Calibration was 47 minutes long
2. Instrument calibrated using a minimum of a blank and 5 standards?		X		
3. Do standard absorbances increase as standard concentrations increase?		X		
4. Instrument calibrated with standards at the SOP levels?		X		
5. Correlation coefficient greater than or equal to 0.995?		X		Correlation coefficient was 0.9999
6. ICV analyzed directly after calibration?		X		
7. ICV within specified control limits?		X		
8. ICB analyzed immediately after ICV?		X		
9. ICB within acceptable range?		X		
10. CRA analyzed at the beginning of the run?		X		
11. CRA results within acceptable range?		X		
12. All CCV's within specified control limits?		X		
13. All CCB's within acceptable range?		X		
14. All CCB's analyzed immediately after CCV's?		X		
B. Client Sample and QC Sample Results				
1. Were all sample results within the linear range of the instrument ?		X		
2. Were there any samples with results more negative than Report Limit?			X	
3. Were samples analyzed within the holding time?			X	
C. Preparation/Matrix QC				
1. Was one method blank prepared for each batch?		X		
2. Were all method blanks less than the specified level?		X		
3. Was an LCS prepared for each batch?		X		
4. Were all LCS recoveries within QC limits?		X		
5. Were matrix spikes, sample duplicates and/or post-digestion spikes run at required frequency?		X		
6. Were all matrix spike recoveries within QC limits?		X		
7. Were post-digestion spike recoveries within QC limits?	X			
8. Were duplicate RPDs within QC limits?		X		
D. Other				
1. Current IDL data on file?		X		
2. Current MDL data on file?		X		
3. Are all nonconformances documented appropriately?		X		
4. Were all project specific instructions followed?		X		NCM#: 08-00104179

2. Were all prep sheets, prep spreadsheets and any existing NCMs reviewed?		✓		
3. Were manual calculations of results and RLs performed for each sample, blank, LCS, LCSD, MS, MSD and DUP? (Document 1 calculation per batch.)		✓		
4. Were elements with negative results >RL reported as ND G?	✓			
5. For each sample, blank, LCS, LCSD, MS, MSD and DUP, were flags, units, DFs, prep date, date/time of analysis verified to be correct?		✓		
6. Were spike amounts verified for each LCS/MS? (Document 1 manual calculation.)		✓		
7. Were method blank results ≤1/2 RL for water/solid samples or <RL for air train samples?		✓		☐ **[mb3] No analyte >QC limit in associated samples.** ☐ **[mb5] Insufficient sample for reanalysis.*** ☐ **[mb7] Samples >10x blank**
8. LCS or LCS/LCSD within QC limits? (90-110%R) 80-120% AIR		✓		☐ **[lcs2] Insufficient sample for reanalysis.** ☐ **[lcs3] LCS%R >QC limits & sample results < RL.***
9. MS/MSD or MS/DUP run at required frequency?		✓		☐ [lcsd] Insufficient sample – lcs/lcsd analyzed.
10. MS %R or MS/MSD %R & RPD within QC limits?			✓	☐ [ms1] ☑ [msd1] LCS acceptable - matrix effects. ☐ [ms2] ☐ [msd2] Native analyte > 4x spike level. ☐ [ms3] ☐ [msd3] Matrix effects & native >4x spike. ☐ [batch] Batch QC on client's sample outside limits.
11. DUP RPD within limits? (0-20 RPD for results ≥5xRL; +RL if result <5xRL)	✓			☐ [rpd] LCS acceptable. Results indicate sample heterogeneity.
12. Were J flags added to the DUP as needed?	✓			
13. Is DUP RPD=0 for two ND results and RPD=200 for one ND and a positive result?	✓			
14. Are all results present for all samples?		✓		
15. Were the samples analyzed within the holding time?		✓		☐ [ht1] HT expired upon receipt ☐ *[ht2] Analysis requested after HT expired.* ☐ See comments section below.

Data Reviewer: DKW **Date:** 7/19/11

TestAmerica Knoxville Metals Final Deliverable Data Review / Narrative Checklist

Lot / SDG #:	HIG050441			
Report Type:	☐ Report (COA)	☑ Level 4 Package	☐ QDS Package	☐ Forms Only	☐ Other _____

Review of Final Deliverable	NA	Yes	No	
1. Are all nonconformances documented and discussed in narrative? (**Reminder:** Place copy of all NCMs in front of deliverable.)	✓ DTW 8/23/11	✓		List NCM #: 08-0010479
2. For air train samples, was the appropriate autotext selected for the narrative? (**Reminder:** Review the autotext and make all appropriate changes.)		✓		☐ [MMT1] Multi-metals trains analyzed for ICP & Hg. ☐ [MMT2] Multi-metals trains analyzed for ICP only. ☐ [MMT3] Multi-metals trains analyzed for Hg only. ☐ [MMT4] Combined FH/BH analyzed for ICP only. ☐ [OH] Ontario-Hydro train. ☑ [OH thimble] Ontario-Hydro train with thimble-FH. ☐ [Method 12] Method 12 air train – Pb only.
3. For PM10 projects, was the appropriate autotext selected for the narrative?	✓			☐ [pm10] PM10 filters analyzed for ICP & Hg. ☐ [pm10icp] PM10 filters analyzed for ICP only.
4. Was a Filter Lot Check report included for PM10 filters?	✓			☐ [fb1] Filter Lot Check Report in Misc. Section. ☐ [fb2] Filter Lot Check Report after LCS report.
5. For low-level waste samples, was the JN autotext selected for the narrative?	✓			☐ [JN] Low-level waste prep.
6. Is the narrative complete and does it contain the appropriate deviations noted on the analyst DRCs, ICP DRC, and Hg DRC?		✓		
7. Were all client/project specific requirements met? (As described in the QuantIMS LIM L40 reports, Lot Summary or Client Analysis Summary, and any applicable QAS.)		✓		
8. Are the original DRCs behind narrative with copy in report?		✓		
9. Are results present for all samples?		✓		
10. Is the final deliverable in the proper format?		✓		
11. Were the ICP and Hg charts and cover pages scanned? (Check .pdf files.)		✓		
12. Are all pertinent ICP Charts listed on page 2 of the ICP DRC?	✓			
13. Are all pertinent Hg Charts listed on page 2 of the Hg DRC?		✓		

Data Reviewer: DTW Date: 7/19/11

Comments:

Revised 8/23/11 DTW
Added reprep and reanalysis for permanganate interferences.

Hg LCS/LCSD Spike: 50 uL of see coments

Expiration Date	Pipet ID
7/20/2011	MET-009

HNO_3 Lot #: J50063
HCl Lot #: J43036
HF Lot #: 5110090
H_3BO_3 Lot # 3651-60

Comments: 100 uL of I-CAL-4389-2 was used to spike the LCS/LCSD. 0.1N HN03 used was 3651-64 Samples filtered through 0.1um filter Lot C0323504-1143 Thimbles were received for this lot. They were torn into pieces and digested in two separate micowave vessels to achieve a complete digestion then combined with the probe rinse and brought to a final volume of 200mL.

QuantIMS Upload Dilution Factor ***and*** QuantIMS Multiplier = Final Microwave Digestate Volume (L) x Final Hg Digestate Volume (ml) / Volume Microwave Digestate Used (ml) x Hg Bench Dilution Factor

TESTAMERICA KNOXVILLE SAMPLE RECEIPT/CONDITION UPON RECEIPT ANOMALY CHECKLIST

Lot Number: _____

Review Items	Yes	No	NA	If No, what was the problem?	Comments/Actions Taken
1. Do sample container labels match COC? (IDs, Dates, Times)	✓			☐ **1a** Do not match COC ☐ **1b** Incomplete information ☐ **1c** Marking smeared ☐ **1d** Label torn ☐ **1e** No label ☐ **1f** COC not received ☐ **1g** Other:	4A 5B Did not receive samples: CHV-Stk-ICRRB-OH-water CHV-Stk-ICRRB-OH-10% NA CHV-Stk-ICRRB-OH-HA
2. Is the cooler temperature within limits? (> freezing temp. of water to 6 °C, VOST: 10°C)	✓			☐ **2a** Temp Blank = _____ ☐ **2b** Cooler Temp = _____ ☐ **2c** Cooling initiated for recently collected samples, ice present.	
3. Were samples received with correct chemical preservative (excluding Encore)?			✓	☐ **3a** Sample preservative =	
4. Were custody seals present/intact on cooler and/or containers?		✓		☐ **4a** Not present ☐ **4b** Not intact ☐ **4c** Other:	
5. Were all of the samples listed on the COC received?		✓		☐ **5a** Samples received-not on COC ☐ **5b** Samples not received-on COC	
6. Were all of the sample containers received intact?	✓			☐ **6a** Leaking ☐ **6b** Broken	
7. Were VOA samples received without headspace?			✓	☐ **7a** Headspace (VOA only)	
8. Were samples received in appropriate containers?	✓			☐ **8a** Improper container	
9. Did you check for residual chlorine, if necessary?			✓	☐ **9a** Could not be determined due to matrix interference	
10. Were samples received within holding time?	✓			☐ **10a** Holding time expired	
11. For rad samples, was sample activity info. provided?			✓	☐ Incomplete information	
12. For 1613B water samples is pH<9?			✓	If no, was pH adjusted to pH 7 - 9 with sulfuric acid? _____	
13. Are the shipping containers intact?	✓			☐ **13a** Leaking ☐ **13b** Other:	
14. Was COC relinquished? (Signed/Dated/Timed)	✓			☐ **14a** Not relinquished	
15. Are tests/parameters listed for each sample?	✓			☐ **15a** Incomplete information	
16. Is the matrix of the samples noted?	✓			☐ **15a** Incomplete information	
17. Is the date/time of sample collection noted?	✓			☐ **15a** Incomplete information	
18. Is the client and project name/# identified?	✓			☐ **15a** Incomplete information	
19. Was the sampler identified on the COC?		✓

Report Date	August 15, 2011

Custody

Heather Tarjeft received all but six of the samples on 7/5/11 after being relinquished by URS Corp. - Austin. The samples were received at 22.2°C and good condition. One of the six samples was received on 7/6/11, and the remaining five samples were received on 7/7/11. These six samples were all received by Lindsey Chatterton. Additional copies of the original Chain of Custody pages are included in the custody section, showing which sampe was received on which date. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, Inc.

Analysis

The samples were analyzed for Polyaromatic Hydrocarbons (PAHs) by Selected Ion Monitoring (SIM) and for Semi-Volatile ICR target analytes by scan using the analytical procedures in EPA SW-846 Method 8270C, *Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry (GC/MS)*.

The Agilent Technologies Model 6890N, Gas Chromatograph ("Wiley" S/N CN10244010) was equipped with a 5973N Mass Selective Detector and a Restek Rxi-5Sil MS, 30 m x 0.25 mm x 0.5 µm (SN 1040180) capillary column for these analyses.

Each sample train consisted of nine fractions: Filter, Acetone Probe Rinse, Methylene chloride Probe Rinse, XAD-2 Trap, Acetone Condenser Rinse, Methylene chloride Condenser Rinse, Impinger, Acetone Impinger Rinse, and Methylene chloride Impinger Rinse. The Field Blank consisted of eight fractions and the Reagent Blank consisted of five fractions. There was no Impinger received for the Field Blank and one set of acetone and methylene chloride reagent was received for the Reagent Blank. The Filter, XAD-2 Trap contents, Probe Rinses, and Condenser Rinses for each sample run were combined and soxhlet extracted. The Impinger was separatory funnel extracted. Additional acetone and methylene chloride rinses were combined at the KD step.

Prior to sample collection, the XAD-2 traps were spiked with a BN Surrogate Mix that consisted of 100 µg of nitrobenzene-d_5, 2-fluorobiphenyl, and terphenyl-d_{14}.

Enthalpy Analytical Narrative Summary
(continued)

Analysis (continued)	For samples ***Run 1***, ***Run 2***, and ***Field Blank***, each Filter/XAD-2 and COND was spiked with 50 µg of the acid extraction surrogates (2-fluorophenol, phenol-d_5, and 2,4,6-tribromophenol) and with 3 µg of the SIM PAH extraction surrogates (fluorene-d_{10} and pyrene-d_{10}). For samples ***Run 3*** and ***Reagent Blank***, each Filter/XAD-2 and COND was spiked with 100 µg of the acid extraction surrogates (2-fluorophenol, phenol-d_5, and 2,4,6-tribromophenol) and with 2 µg of the SIM PAH extraction surrogates (fluorene-d_{10} and pyrene-d_{10}). For the ***MB*** and QC samples, each Filter/XAD-2 and COND was spiked with no acid extraction surrogates (2-fluorophenol, phenol-d_5, and 2,4,6-tribromophenol) and with 4 µg of the SIM PAH extraction surrogates (fluorene-d_{10} and pyrene-d_{10}). Each filter/XAD-2 fraction was Soxhlet extracted for 18 hours. The FH and BH rinse fractions were added to the flat bottom flask and used to extract the corresponding filter/XAD-2 fractions. The Impinger fractions were Separatory funnel extracted with methylene chloride. Each impinger extract and remaining rinses fractions were combined with the corresponding Filter/XAD-2 extract and concentrated to a 5 mL final volume. Laboratory method blanks and Laboratory Control Samples (LCSs) were prepared and analyzed with these samples. These laboratory QC samples were spiked as noted above.A 100 µL aliquot of each sample extract was spiked with SVOA internal standard spiking solution such that the final concentration of the internal standards were 40 µg/mL, prior to scan analyses and 400ng/mL, prior to SIM analysis.
Calibration	All analytes met the 15% mean RSD initial calibration requirements. All SPCC and CCC criteria were met in the initial and continuing calibrations. All other compounds in the continuing calibration met the 50% difference in-house requirements.retention time) and quantify each target compound. None of the calibration data is included in the report to provide the client the requested type of data package. All the data is available upon request.
Chromatographic Conditions	The acquisition methods M8270SCN.m, PAHSIM.m, and DFTPP-1.m are available upon request but have not been included in this report as noted above.

Enthalpy Analytical Narrative Summary
(continued)

QC Notes	Perylene-d12 internal standard response was low for samples ***Run 1***, ***Run 2***, and ***Run 3*** in the Scan and SIM analyses. Phenanthrene-d10 internal standard response was high for sample ***Run 1 LD*** and ***Run 3*** in the SIM analyses. All other internal standard responses met QC criteria, except chrysene-d10 response was low in the associated methylene chloride SIM system blank. All surrogates met QC criteria in the Scan analysis. Fluorene-d10 surrogate recoveries were high in samples ***Run 1***, ***Run 2***, and ***Run 3*** for the SIM analysis. Fluorene-d10 and pyrene-d10 surrogate recoveries were high for the ***Reagent Blank*** sample in the SIM analysis. A second aliquot of sample ***Run 1*** was analyzed as a lab duplicate and confirmed failing QC. A second aliquot of sample ***Run 3*** was prepared as a lab duplicate for the scan analysis and sample ***Run 1*** was prepared as a lab duplicate for the SIM analysis. The QC duplicate analysis criterion of <20% difference was met for all analytes, except benzoic acid in the scan analysis at 54.6%. The LCSs were spiked with each analyte of interest and analyzed with these samples. The spiked compounds exhibited recovery values within acceptance limits, except for pyridine and aniline in ***LCS-1***, and a,a-dimethylphenethylamine, 1,4-phenylenediamine, benzidine, 3,3-dimethylbenzidine, 3,3-dimethoxybenzidine, and 3,3-dichlorobenzidine in both ***LCS-1*** and ***LCS-2***. All sample preparation and analytical holding times specified in the method were met.
Reporting Notes	All final results are reported as total 'Catch weight' values. The reporting units are ***µg*** for all scan analyses and ***ng*** for all SIM analyses. The results presented in this report are representative of the samples as provided to the laboratory.

General Reporting Notes

The following are general reporting notes that are applicable to all Enthalpy Analytical, Inc. data reports, unless specifically noted otherwise.

- The acronym ***MDL*** represents the Minimum Detection Limit. Below this value the laboratory cannot determine the presence of the analyte of interest reliably.
- The acronym ***LOQ*** represents the Limit of Quantification. Below this value the laboratory cannot quantitate the analyte of interest within the criteria of the method.
- The acronym ***ND*** following a value indicates a non-detect or analytical result below the MDL.
- The letter ***J*** following a value indicates an analytical result between the MDL and the LOQ. A J flag indicates that the laboratory can positively identify the analyte of interest as present, but the value should be considered an estimate.
- The letter ***E*** following a value indicates an analytical result exceeding 100% of the highest calibration point. The associated value should be considered as an estimate.
- The acronym ***DF*** represents Dilution Factor. This number represents dilution of the sample during the preparation and/or analysis process. The analytical result taken from a laboratory instrument is multiplied by the DF to determine the final undiluted sample results.
- The addition of ***MS*** to the Sample ID represents a Matrix Spike. An aliquot of an actual sample is spiked with a known amount of analyte so that a percent recovery value can be determined. This shows what effect the sample matrix may have on the target analyte, i.e. whether or not anything in the sample matrix interferes with the analysis of the analyte(s).
- The addition of ***MSD*** to the Sample ID represents a Matrix Spike Duplicate. Prepared in the same manner as an MS, the use of duplicate matrix spikes allows further confirmation of laboratory quality by showing the consistency of results gained by performing the same steps multiple times.
- The addition of ***LD*** to the Sample ID represents a Laboratory Duplicate. The analyst prepares an additional aliquot of sample for testing and the results of the duplicate analysis are compared to the initial result. The result should have a difference value of within 10% of the initial result (if the results of the original analysis are greater than the LOQ).
- The addition of ***AD*** to the Sample ID represents an Alternate Dilution. The analyst prepares an additional aliquot at a different dilution factor (usually double the initial factor). This analysis helps confirm that no additional compound is present and coeluting or sharing absorbance with the analyte of interest, as they would have a different response/absorbance than the analyte of interest.
- The Sample ID ***LCS*** represents a Laboratory Control Sample. Clean matrix, similar to the client sample matrix, prepared and analyzed by the laboratory using the same reagents, spiking standards and procedures used for the client samples. The LCS is used to assess the control of the laboratory's analytical system. Whenever spikes are prepared for our client projects, two extra spikes are prepared. The extras (randomly chosen) are labeled with the associated project number and kept in-house at the appropriate temperature conditions. When the project samples are received for analysis, the LCSs are analyzed to confirm that the analyte could be recovered from the media, separate from the samples which were used on the project and which may have been affected by source matrix, sample collection and/or sample transport.

General Reporting Notes

(continued)

- **Significant Figures**: Where the reported value is much greater than unity (1.00) in the units expressed, the number is rounded to a whole number of units, rather than to 3 significant figures. For example, a value of 10,456.45 ug catch is rounded to 10,456 ug. There are five significant digits displayed, but no confidence should be placed on more than two significant digits.
- **Manual Integration**: The data systems used for processing will flag manually integrated peaks with an "M". There are several reasons a peak may be manually integrated. These reasons will be identified by the following two letter designations. The peak was ***not integrated*** by the software **"NI"**, the peak was ***integrated incorrectly*** by the software **"II"** or the ***wrong peak*** was integrated by the software **"WP"**. These codes will accompany the analyst's manual integration stamp placed next to the compound name.

URS Data Quality Assessments

Data Quality Assessment
Collection of Stack Gas in all Isokinetic Sampling Trains

Analyte(s)	Method(s)
Hydrogen Chloride and Chlorine	EPA Method 26A
Particulate Matter/Metals	EPA Method 29
PM10	EPA Methods 201A/202
Speciated Mercury	Ontario Hydro
Semivolatile Organics	SW-846 Method 0010
PCDD/PCDF/PCB	SW-846 Method 0023A

Preliminary Measurements	Sampling Location Measurements	All ports meet the minimum requirements for distance from upstream and downstream disturbances.
	Cyclonic Flow Check	Cyclonic flow demonstrated to be within constraints for isokinetic sampling.
Sample Collection	Minimum Sample Volume	Two runs for Methods 201A/202 fell short of the volume specification in the test plan. All other runs met test plan specifications. This was corrected for subsequent runs. See table below.
	Minimum Sample Duration	Most runs fell below the target in the test plan. See table below.
	Isokinetic Sampling Rate	All trains met method specifications. See table below.
Sampling Train Operation	Probe Temperature	See table below.
	Filter Temperature	All runs met method specifications. See table below.
	Transfer Line Temperature	All runs met method specifications. See table below.
	Condenser Exit Temperature	See table below.
	Impinger Exit Temperature	All runs but two met method specifications. The two outliers were points at the beginning of the run, before any cool gas had moved through the sampling train. See table below.
Leak Checks	Sampling Train – Pre Test	All runs met method specifications. See table below.
	Sampling Train – Port Changes	All runs met method specifications. See table below.
	Sampling Train – Post Test	All runs met method specifications. See table below.
	Pitot Tubes – Pre Test	All runs met method specifications. See table below.
	Pitot Tubes – Post Test	All runs met method specifications. See table below.

Sampling Documentation	Documentation of Calibration	All calibrations documented appropriately; All calibrations meet specifications.
	Correct Calibration Factors Used	Yes.
	Correct Molecular Weight Used	Yes.
	Completed Data Sheets – Sample Collection	Yes. See table below.
	Completed Data Sheets – Sample Recovery	All required information collected on sampling data sheets. See table below.
Conclusions and Comments	These data are acceptable for the intended purpose. The slight shortfall for volume on two M201A/M202 runs (1.76 and 1.92 m^3 compared to the specification of 2 m^3) is not significant. This was resolved on subsequent runs. The volume collected gives sufficient sensitivity to interpret these data. No data are qualified based on this finding. The sample durations presented in the test plan were estimates to accomplish the volumes required in the ICR. As, for the most part, the volume targets were accomplished, the shortfalls in sample duration have no impact on the usability of these data.	

Sampling Details

Data Quality Assessment
Analysis of Stack Gas for Filterable and Condensable Particulate Matter

Parameter	Filterable and Condensable Particulate Loading in Stack Gas
Sampling Method	EPA Methods 201A and 202
Analytical Method	Gravimetric Analysis
Laboratory ID Number(s)	0611-24
Sample Shipping and Receipt	Samples received intact and at ambient temperature.
Holding Time(s)	All samples prepared and analyzed within 27 days of sampling. Test plan specifies analysis within 14 days. The method has no specification for holding time. See table below.
Blank Results	Negligible levels found in laboratory blanks. Field Blank results for FPM well below actual results. Field blank results for CPM are significant and on the same order as the field results. See tables below and in main body of report.
Results of Multiple Weighings	Final weighing stable within < 0.5 mg.
Balance Calibration	Performed daily during applicable periods.
Conclusions and Comments	These data are acceptable for the intended purpose. The analysis of these samples outside the holding time specified in the test plan has no impact on the usability of these results. No data are flagged based on this finding. The results for FPM and CPM presented in the report are not corrected for field blanks. These may have a positive bias for CPM, but represent a conservative estimate of emissions. No data are flagged based on blank results.

Data Quality Assessment
Analysis of Stack Gas for Metals

Parameter	Selected Metals in Stack Gas
Sampling Method	EPA Method 29
Analytical Method	ICPMS, SW-846 Method 6020
Laboratory Job ID Number(s)	G1G050412
Preparation Batch Number(s)	195193, 1196180
Sample Shipping and Receipt	Samples received intact and at ambient temperature. Test plan has no specification for temperature.
Holding Time(s)	All samples analyzed within 25 days of sample collection. The test plan specifies analysis within 14 days. See table below.
Blank Results	Lead found in laboratory blanks near the detection limit. Field blank results show detectable levels of most target analytes... See tables below and in the main body of the report.
Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) Results	All recoveries are between 75 and 100%. All relative percent deviations are below 10%. These meet the laboratory specifications. See tables below.
Matrix Spike (MS) and Matrix Spike (MSD) Results	All recoveries are between 75 and 105%. RPDs are all below 5%. Test plan specifications are MS/MSD between 75 and 125% with RPD below 25%. All MS/MSD results met the test plan criteria. One recovery (nickel on the front half sample) was just outside the laboratory specifications. (77% recovery; acceptance 86-110). Results are summarized in tables below.
Conclusions and Comments	These data are acceptable for the intended purpose. The analysis of these samples outside the test plan specified holding time of 14 days has no impact on the data. The method-specified holding time for these analyses is 6 months. No data are qualified based on this finding. The levels of target analytes found in the field and laboratory blanks are well below the levels found in the field samples. As such, these blank levels are insignificant and negligible. No data are qualified based on blank results. The nickel recovery outside laboratory criteria is attributed to the low spike level compared to the native level. This has no impact on the results. No data are qualified based on MS/MSD results.

Data Quality Assessment
Analysis of Stack Gas for Mercury

Parameter	Mercury in Stack Gas
Sampling Method	Ontario Hydro
Analytical Method	CVAA, SW846 Method 7470A
Laboratory Job ID Number(s)	H1G050441
Preparation Batch Number(s)	1187043, 1187045, 1187046
Sample Shipping and Receipt	Samples received intact and at ambient temperature. QAPP has no specification for temperature.
Holding Time(s)	All samples were originally analyzed within 22 days of sample collection. Permanganate fractions were re-analyzed between 55 and 60 day after sample collection. Test plan specifies analysis within 14 days. The method specified analysis within 45 days. See table below.
Blank Results	Nothing detected in laboratory blanks. Field blanks near the detection limit. See tables below and in the main body of the report.
Laboratory Control Sample (LCS) and Laboratory Control Sample Duplicate (LCSD) Results	All recoveries are between 80 and 110%. All relative percent deviations are below 5%. See tables below.
Matrix Spike (MS) and Matrix Spike (MSD) Results	Test plan specifications are MS/MSD recovery at 90-110% recovery MS/MSD results for the KCl fraction met these criteria. MS/MSD results for the nitric peroxide fraction were outside these criteria, but met the laboratory specification of 80-120% recovery. Initially, MS/MSD results for the permanganate fraction were below both the test plan and laboratory specifications. The permanganate samples were re-prepared and analyzed with acceptable MS recoveries. Results are summarized in tables below.

Conclusions and Comments	As the method specifies analysis of samples within 45 days of sample collection, the analysis of the samples outside the test plan specification of 14 days has no impact on the interpretation of results. The four samples analyzed between 55 and 60 days were re-analyzed based on MS/MSD issues. As these samples were kept in laboratory conditions and under very acidic conditions, there is no reason to suspect any loss of mercury. No data are flagged based on holding time. The levels of mercury found in the blank samples are well below the levels found in the field samples. No data are qualified or invalidated based on blank results. The MS/MSD results for the initial analysis of the permanganate fraction have recoveries (43, 51%) well outside the acceptance criteria (80-120%). These samples were re-analyzed at a higher dilution to mitigate the matrix effects. The more diluted analyses provided analytical results within method specification for MS recovery, and these data are reported in the body of the report.

Data Quality Assessment
Analysis of Stack Gas for Polychlorinated Dibenzodioxins and Dibenzofurans

Parameter	PCDD/PCDF in Stack Gas
Sampling Method	EPA Method 23
Analytical Method	EPA Method 23
Laboratory Project Number(s)	H1G050439
Preparation Batch Number(s)	1187027
Sample Shipping and Receipt	All samples received intact and at or below 4°C. The test plan specifies <4°C.
Holding Time(s)	All samples prepared within 14 days of sampling and analyzed within 8 days of preparation. The test plan specifies analysis within 14 days of sample collection. See table below.
Blank Results	Nothing detected observed in the laboratory blank. Results for field blank show 4 compounds detected. The levels observed in the field samples are very low. For all four compounds the level in the field blank is similar to the levels in the field samples. See table below and in the main body of the report.
Laboratory Check Sample (LCS) Results	Recovery of all species in LCS between 85 and 110%. See table below.
Surrogate and Internal Standard Spike Results	Recovery of internal standards between 60 and 100%. Recovery of pre-sampling surrogates between 75 and 105%. Test plan specifies internal standard recovery of 25-130% and recovery of surrogates between 70-130%. See tables below.
Conclusions and Comments	These data are acceptable for the intended purpose. As noted above, sample analysis was conducted outside the 14-day specification in the test plan. Method 23 specifies that samples be extracted within 30 days of collection and analyzed within 45 days of extraction. As the holding times met the method specification, no data are qualified or invalidated based on this finding. As noted above, the field blank had four compounds at levels similar to the field samples. This indicates a potential positive bias in the field samples, which is conservative relative to the determination of emission rate. No data are qualified based on field blank results.

Data Quality Assessment
Analysis of Stack Gas for Polychlorinated Biphenyls

Parameter	PCB in Stack Gas
Sampling Method	EPA Method 23
Analytical Method	EPA Method 1668A
Work Order Number(s)	H1G050439
Preparation Batch Number(s)	1187028
Sample Shipping and Receipt	All samples received intact. With two exceptions all samples at or below 4°C. The impinger catch samples from runs 2 and 3 were received at 27°C. The test plan specifies <4°C.
Holding Time(s)	All samples prepared within 14 days of sampling and analyzed within 9 days of preparation. The test plan specifies analysis within 14 days of collection. See table below.
Blank Results	Levels of three PCB analytes were observed in the laboratory and field blank sample. The levels observed in the field samples are very low. For all three compounds the level in the field blank is similar to the levels in the field samples. See table below and in the main body of the report.
Laboratory Check Sample (LCS) and Laboratory Check Sample Duplicate (LCSD) Results	Recovery of all species in LCS and LCSD is between 95 and 130%. All RPDs are below 10%. See table below.
Surrogate and Internal Standard Spike Results	Recovery of all internal standards between 60 and 135%. Recovery of surrogates between 75 and 115% with a pooled relative standard deviation below 10%. Test plan specifies internal standard recovery of 25-130% and recovery of surrogates between 70-130%. See tables below.

Conclusions and Comments	These data are acceptable for the intended purpose. As noted above, samples associated with two different runs were received at temperatures outside the test plan specification. These samples were aqueous fractions, and are not expected to contain significant amounts of the target analytes. Further, EPA Method 23 has no specification for the analysis of the impinger fractions, and therefore the results which include the impinger fractions represent a conservative estimate of PCB emissions. No data are qualified based on this finding. As noted above, sample analysis was conducted outside the 14-day specification in the test plan. Method 23 specifies that samples be extracted within 30 days of collection and analyzed within 45 days of extraction. Method 1668 notes that there is no holding time as long as samples are kept cold. As the holding times met the method specification, no data are qualified or invalidated based on this finding. As noted above, the laboratory and field blank had three compounds at levels similar to the field samples. This indicates a potential positive bias in the field samples, which is conservative relative to the determination of emission rate. No data are qualified based on field blank results.

Data Quality Assessment
Analysis of Stack Gas for Hydrogen Chloride, Hydrogen Fluoride and Chlorine

Parameter	Hydrogen Chloride, Hydrogen Fluoride and Chlorine in Stack Gas
Sampling Method	EPA Method 26A
Analytical Method	Ion Chromatography, EPA Method 26A
Laboratory Project ID Number(s)	0611-24
Sample Shipping and Receipt	Sample received intact and at ambient temperature.
Holding Time(s)	All samples prepared and analyzed within 20 days of sample collection. The test plan specifies analysis within 14 days. See table below.
Blank Results	No chloride was detected in laboratory or field blanks. Fluoride was detected in the field blank and in one reagent blank at levels below the levels in the field samples. See table below.
Laboratory Check Sample (LCS) Results	All LCS recoveries are between 95 and 105%. See table below.
Matrix Spike (MS) and Matrix Spike Duplicate (MSD) Results	All recoveries are between 90 and 115%: all RPDs are less than 5%. The test plan specifies recovery between 75 and 125% and <25% RPD. See table below.
Duplicate Analyses	All samples analyzed in duplicate. 15 of 17 samples had duplicates meeting the method specification of 5% difference from the mean. The two outliers were results near the detection limit with 5.4 and 8.1% difference from the mean. See table below.
Conclusions and Comments	These data are acceptable for the intended purpose. Although the samples were analyzed outside the plan-specified holding time of 14 days, they were analyzed within the 4-week window allowed by EPA Method 26A. No data are qualified based on this finding. The results for fluoride in the blank samples indicate that the field results may have a positive bias. As the data are not corrected, the emissions estimates are conservative. No data are qualified based on the blank results. Although two samples had precision outside method acceptance, these results are very near the detection limit. At these levels, the results carry a "J" flag, and are expected to have increased imprecision. No data are qualified based on these results.

Data Quality Assessment
Collection of Stack Gas in all Non-Isokinetic Sampling Trains

Analyte(s)	Method(s)
Selected VOC	Method 18 bag
Selected VOC	Method 18 sorbent
Methanol	Method 308

Sample Collection	Minimum Sample Volume	Most trains met specifications. See table below.
	Minimum Sample Duration	All trains met specifications. See table below.
Leak Checks	Sampling Train – Pre Test	All runs met specifications.
Sampling Documentation	Documentation of Calibration	Dry gas meters and temperature readouts were calibrated. Calibration met all applicable specifications.
	Correct Calibration Factors Used	Yes
	Completed Data Sheets – Sample Collection	All required information collected on sampling data sheets.
	Completed Data Sheets – Sample Recovery	All required information collected on recovery data sheets.
Conclusions and Comments	These data are acceptable for the intended purpose. Although 4 bag samples collected less sample volume than specified, there was sufficient sample in the bag for analysis, and the data are considered representative. No data are qualified based on this finding.	

Sampling Details

	Method 18 Bag	Method 18 Sorbent	Method 308
Sample Volume

Data Quality Assessment

Analysis of Stack Gas for Selected Organic Compounds

Bag Sample

Parameter	1,3-Butadiene, acrolein, acetone, pentane, methylene chloride, hexane, benzene, trichloroethene, toluene, 1,2-dibromethane, tetrachloroethene Carbon disulfide
Sampling Method	EPA Method 18
Analytical Method	GC
Work Order Number(s)	0611-22
Holding Time(s)	All bag samples prepared and analyzed within 64 hours of sample collection. See table below Test plan specifies analysis within 24 hours.
Blank Results	Nothing was observed in any blank samples.
Replicate Analysis	All samples analyzed in triplicate. Results show good repeatability with all difference from the mean below 5%. Details are in the appended laboratory report.
Spike Results	Per EPA Method 18, bags were spiked with several analytes of interest, and analyzed. Matrix spiked samples were all held for longer than the samples themselves. Bag samples were spiked with 1,3-Butadiene, acrolein, acetone, methylene chloride, hexane, benzene, trichloroethene, and toluene With the exception of 1,3-butadiene, recovery of all spiked species was measured between 70 and 130%. For the spiked compounds, the results were corrected for spike recovery. For non-spiked compounds, all results are reported un corrected (as if there were 100% spike recovery). Recovery of 1,3-butadiene was measured at 55%. The bag samples were not spiked with acetonitrile, acrylonitrile, pentane, 1,2-dibromomethane, tetrachloroethene or carbon disulfide. See table below.
Other Observations	The test plan specifies the use of flex film bags for sample collection. Tedlar bags were used instead, based on laboratory recommendation about the sturdiness of flex-film bags. As recoveries are acceptable, no data are flagged based on this observation.

Conclusions and Comments	These data are acceptable for the intended purpose. Although the samples were analyzed outside the time specified in the test plan, the spiked samples were analyzed at a holding time longer than the samples, as specified in EPA Method 18. No data are qualified based on holding time. The low recovery of 1,3-butadiene indicated increased uncertainty in these results. However, since the results are corrected for the low recovery, there may not be a bias in the data.

Holding Time

Sample ID	Sample Date and Time	Analysis Date and Time		Holding Time (Hours)	
		All analytes except CS_2	Carbon Disulfide	All analytes except CS_2	Carbon Disulfide
CHV-Stk-ICR1-M18b-Bag A	6/27/11 11:05	6/29/11 15:32	6/30/11 10:01	46.45	64.9
CHV-Stk-ICR2-M18b-Bag A	6/28/11 12:33	6/30/11 12:27	6/30/11 18:29	41.9	47.9

Hexane	113
Benzene	106
Trichloroethene	109
Toluene	103

Data Quality Assessment

Analysis of Stack Gas for Volatile Organic Species

Sorbent Tube Samples

Parameter	Volatile Organic Compounds in Stack Gas Acetonitrile, acrylonitrile, methy t-butyl ether, 2-nitropropane, isooctane, methyl isobutyl ketone, chlorobenzene, ethylbenzene, p/m-xylene, styrene, o-xylene, cumene, nitorbenzne
Sampling Method	EPA Method 18
Analytical Method	EPA method 18
Laboratory Job ID Number(s)	0611-22
Sample Shipping and Receipt	All samples received intact. Different packages received at 3°C, 10°C and 19°C. Test plan specifies 4°C.
Holding Time(s)	All samples analyzed within 22 days of sample collection. Test plan specifies analysis within 14 days of sample collection. See table below
Blank Results	No target analyte was measured in any laboratory blank or field blank.
Breakthrough	Breakthrough is assessed across the XAD-4 sorbent (front half and back half of the sorbent trap and across the charcoal (front half and back half). In addition, breakthrough is assessed across all four sorbent fractions. See table below. In most cases, the breakthrough across the XAD-4 or charcoal was below 25%. In three cases, the breakthrough across the whole train exceeded 25%. These are all three runs for acetonitrile.
Spiked Sample Recovery	Eleven of thirteen target analytes had spike recoveries within 70-130%. The outliers are acetonitrile (28.4%) and styrene (10.7%).
Replicate Analysis	Every analysis was performed in triplicate. 594 of 615 triplicate analyses had differences from the mean result that did not exceed 5%. The 21 outliers were distributed as follows: • Acrylonitrile, 2 occurrences • Methyl tert-butyl ether, 7 occurrences • 2-Nitropropane, 1 occurrence • Isooctane, 6 occurrences • Methyl isobutyl ketone, 2 occurrences • Chlorobenzene, 1 occurrence • Styrene, 1 occurrence • Cumene, 1 occurrence In every case, these outliers were associated with analyses between the method detection limit (MDL) and the lowest calibration standard. In addition, separate analytical aliquots were prepared of two different samples. All RPDs for these were less than 10%.

Laboratory Check Sample (LCS) Results	Spiked sorbent tubes or laboratory media were analyzed to assess overall laboratory analytical recovery. A second source standard was analyzed with each batch. Except as noted, recovery of all analytes in all these samples is between 80 and 120%. • Acetonitrile, aqueous LCS, 0% recovery • Acrylonitrile, aqueous LCS, 15-20% recovery • 2-Nitropropane, aqueous LCS, 65-70% recovery LCS were prepared with the raffinate samples analyzed for acetonitrile and acrylonitrile. These recoveries ranged from 75 to 95%.
Conclusions and Comments	With the exceptions noted below, these data are acceptable for the intended purpose. Although some of the samples arrived at temperatures outside the specification, there is no indication of sample degradation. Except as noted, spike recoveries met method specification, and results from all runs were similar. No data are qualified based on preservation. Although the samples were analyzed outside the time specification in the test plan, they were analyzed within the time allowed by EPA Method 18. No data are qualified based on holding time. The consistent breakthrough of approximately 35% or more of the acetonitrile found in the sampling train suggests that there may be significant loss of acetonitrile from the sampling train. This is consistent with the low spike recovery and low LCS recoveries. The spike recoveries outside acceptance criteria for acetonitrile and styrene indicate that these data may be questionable. As discussed in the body of the report, results for styrene were developed by an alternate methodology, FTIR. The FTIR results met all method specifications and are presented in the summary for these two compounds. The low spike recovery for acetonitrile, combined with the results for LCS recovery and breakthrough suggests that there may be significant loss of acetonitrile in results for field samples. The extremely low LCS recovery for acetonitrile suggests that there may be significant loss of acetonitrile in results for field samples. The low recoveries for acrylonitrile and 2-nitropropane in LCS samples suggest that there may be losses in field samples. However, recovery of field spikes for both of these species are acceptable. Data for 2-nitropropane and acrylonitrile are not qualified based on LCS recovery. Results for acetonitrile are rejected, based on low LCS recovery, low field spike recovery and breakthrough. As noted above, all the replicate results outside acceptance criteria were associated with results between the method detection limit and the lowest calibration standard. Increased imprecision is expected at these low levels. No data are qualified or invalidated based on replicate results.

Data Quality Assessment
Analysis of Stack Gas for Volatile Organics

Parameter	Methane and Ethane in Stack Gas (bag samples)
Sampling Method	Method 18
Analytical Method	GC
Holding Time(s)	All samples prepared and analyzed real time.
Calibration	Instrument calibrated before test effort. Average of three injections met method specifications. Instrument calibrated after test effort. Post-test calibration met method specifications. See tables below.
Recovery Study	Analytes recovered within method specifications.
Replicate Analysis	Multiple analyses conducted within each test run. Results show good repeatability.
Conclusions and Comments	These data are acceptable for the intended purpose.

Pre-Test Calibration

Data Quality Assessment
Stack Gas Continuous Emission Monitors

Parameter(s)	Oxygen, Carbon Dioxide, Total Hydrocarbon
Method(s)	EPA Methods 3A, 25A
Calibration Gas	Spans were set appropriately; gases were of appropriate and documented quality. Correct values of all calibration gases used in all calculations. See CEM data in appendix.
Interference	All analyzers used met the interference check criteria.
Stratification Check	Stratification check performed using one analyte (oxygen). Results of stratification check used to determine number of sampling points. See table below.
Calibration Error	All calibration error checks met method specifications. See tables below.
System Bias	All system bias checks met method specifications. See tables below.
Drift	All drift checks met the method specifications. See tables below
Conclusions and Comments	These data are acceptable for the intended purpose.

Stratification Check Results– Oxygen

Date	Traverse Point	Oxygen Concentration (%)	Difference from Mean (%)	% Difference from Mean
6/22/2011	**1**	13.46	0.26	1.97
	2	13.25	0.05	0.41
	3	12.89	0.31	2.38
Mean Concentration of all Traverse Points		13.20		
Do the concentrations at each traverse point differ from the mean concentration by no more than (a) ±5.0% of the mean or (b) ±0.5 ppm (whichever is less restrictive)?		YES	**Use 1 point**

T_F 501 °F

$T_{abs,\,RT}$ 961 °R

Thermocouple Readout ID No. A61402

T_F 499 °F

$T_{abs,\,TC}$ 959 °R

Compare thermocouple to reference thermometer

$\frac{T_{abs,TC}}{T_{abs,RT}}$ = 0.998

Is this between 0.985 and 1.015? Y (y/n)

Calculate applicability range for thermocouple.

$Min_{abs} = 0.9 \times T_{abs,TC}$ = 503 °R → $Min_F = Min_{abs} - 460$ = 863 °F

$Max_{abs} = 1.1 \times T_{abs,TC}$ = 595 °R → $Max_F = Max_{abs} - 460$ = 1055 °F

[1] Per SOP 032, this calibration is generally performed at 160°F.

[2] $T_{abs;}$ (°R) = T_F (°F) + 460

$T_{abs, RT}$ 963 °R

Thermocouple Readout ID No.: A161402

T_F 500 °F

$T_{abs, TC}$ 960 °R

Compare thermocouple to reference thermometer

$\frac{T_{abs,TC}}{T_{abs,RT}}$ = 0.997

Is this between 0.985 and 1.015? Y (y/n)

Calculate applicability range for thermocouple.

$Min_{abs} = 0.9 \times T_{abs,TC}$	$Min_F = Min_{abs} - 460$
864 °R	404 °F
$Max_{abs} = 1.1 \times T_{abs,TC}$	$Max_F = Max_{abs} - 460$
1056 °R	596 °F

[1] Per SOP 032, this calibration is generally performed at 160°F.

[2] T_{abs} (°R) = T_F (°F) + 460

ANALYTICAL INFORMATION

This certification was performed according to EPA Traceability Protocol For Assay & Certification of Gaseous Calibration Standards; Procedure G-1; September, 1997.

Cylinder Number: CC67546 **Certification Date:** 03May2011 **Exp. Date:** 03May2014
Cylinder Pressure*:** 2000 PSIG **Batch No:** LAP0040412

COMPONENT	CERTIFIED CONCENTRATION (Moles)	ACCURACY**	TRACEABILITY
CARBON DIOXIDE	9.74 %	+/- 1%	Direct NIST and VSL
OXYGEN	11.1 %	+/- 1%	
NITROGEN	BALANCE		

*** Do not use when cylinder pressure is below 150 psig.
** Analytical accuracy is based on the requirements of EPA Protocol Procedure G1, September 1997.

REFERENCE STANDARD

TYPE/SRM NO.	EXPIRATION DATE	CYLINDER NUMBER	CONCENTRATION	COMPONENT
NTRM 1674	03Feb2016	K009587	7.016 %	CARBON DIOXIDE
NTRM 2350	01May2013	K026427	23.50 %	OXYGEN

INSTRUMENTATION

INSTRUMENT/MODEL/SERIAL#	DATE LAST CALIBRATED	ANALYTICAL PRINCIPLE
FTIR//MG-09-149	21Apr2011	FTIR
SERVOMEX/MODEL 244A/701/716	25Apr2011	PARAMAGNETIC

Expiration Date: 19May2012

SPECIAL HANDLING INSTRUCTIONS

Do not use or store cylinder at or below the stated dew point temperature. Possible condensation of heavier components could result. In the event the cylinder has been exposed to temperatures at or below the dew point, place cylinder in heated area for 24 hours and then roll cylinder for 15 minutes to re-mix.

Use of calibration standards at or below dew point temperature may result in calibration error.

Subject Soot Blows - response to voice mail

History: This message has been replied to.

The two main components expected to increase during a soot blow would be PMs and metals. You may also see some larger organics such as PAHs. I don't believe there is a requirement in the ICR to perform testing during a soot blow, but to test during normal operations (which may include a soot blow). If the facility would like to submit a soot blow run to show variability and possibly increase of emissions, the data would certainly be welcomed.

Subject Re: Method 320 for VOC HAPs

History: This message has been forwarded.

We will accept 320 in lieu of Method 18 for Methanol since the concentrations are detectable and was self validated per Section 13.0 We would be open to using 320 for other compounds on a case by case basis, but would want the in stack concentrations above the FTIR detection limit and each compound must be validated (Sec 13) .

Subject: Method 320 for VOC HAPs

Hi Jason and Gerri,

Yesterday we validated our FTIR, per section 13.0 of Method 320, on an FCCU for methanol, and the concentrations in the stack are above detection limits. May we use this method in lieu of Method 18 or Method 308 for methanol during the ICR testing? Would you accept Method 320 for any of the other VOC HAPs on the ICR list?

Best regards,

Chris Weber

Subject Re: Use of EPA Methods 201A/202 and SW-846 Method 0061 on a FCCU for Refinery ICR

History: This message has been forwarded.

Chris,

There could be issues with the Teflon at elevated temperatures. We do agree that a water cooled probe may be necessary. You may even want to consider using an air/water cooled probe with a glass liner.

As for total filterable particulate, for stacks without entrained water droplets, see the row for metals in Table 1.2 of Component 4. You should determine filterable PM emissions according with Method 29 using a filter temperature of 320°F ± 25°F. Alternatively, you may opt to conduct a separate EPA Method 5 or 5F test with a filter temperature of 320°F ± 25°F in lieu of measuring PM with the Method 29 train.

Sincerely,
Gerri G. Garwood, P.E.

Subject: Use of EPA Methods 201A/202 and SW-846 Method 0061 on a FCCU for Refinery ICR

Hi Gerri,

URS is planning to conduct source testing on a FCCU according to Component 4 of the Refinery ICR. The FCCU stack gas temperature is approximately 400 degrees Fahrenheit, and there is not a wet scrubber and presumably no entrained water droplets in the gas stream. I would like to ask for a few clarifications regarding the use of EPA Methods 201A/202 and SW-846 Method 0061.

Section 1.1 of SW-846 Method 0061 states that the sampling train has only been evaluated at temperatures of less than 300 degrees Fahrenheit. However, the stack gas temperature of the FCCU that is required to be tested is approximately 400 degrees Fahrenheit. Does EPA still require the use of SW-846 Method 0061 for compliance with the Refinery ICR, and if so, do you recommend the use of a water-cooled sampling probe?

Component 4 of the Refinery ICR requires the testing for PM/PM2.5 (filterable) on FCCUs using EPA Method 201A when no water droplets are entrained in the gas stream. Will you please clarify if analysis for total filterable particulate (PM) and filterable PM2.5 is required? Presumably, this would require a separate analytical fraction for PM, obtained by brush cleaning the cyclone cup and rinsing the cyclone cup, internal surface of the nozzle, the cyclone internal surfaces, and the outside surface of the downcomer line with acetone. In addition, according to Section 1.6 of EPA Method 201A, an isokinetic sampling rate between 90 and 110% would be required. On an FCCU with a stack gas temperature of approximately 400 degrees Fahrenheit, do you require the use of an in-stack PM2.5 filter or an out-of-stack PM2.5 filter heated according to EPA Method 5 criteria?

Best regards,

Chris Weber

Kapolei, HI 96707

Dear Mr. Galloway;

The problem encountered with the July 1 shipment you sent to Enthalpy Analytical, Inc. in Durham, NC on package tracking number 872971873565 has been brought to my attention.

We are very concerned, and deeply regret any inconvenience caused by our failure to deliver this shipment as expected. According to our records the package was tendered in Honolulu, HI on July 1. Unfortunately, we are unable to provide further package status information or proof of delivery information for this item.

A trace has been initiated on this shipment under control number 0808621145 and is currently ongoing. Thus far, all attempts made by our tracing representatives to locate the shipment have been unsuccessful. They will notify you of further developments as they occur.

Should you need to contact us with further questions or concerns regarding this shipment, please call our toll-free customer service number, 1-800-463-3339, and reference the control number. A FedEx Customer Service Representative will be happy to assist you.

Regards,

Margaret E. Boyle
