ICIS Version 8.2.1

ICL Version: 10.710
File name: a080624i5
Study: 1668 ICAL CS5
Sample: WO=2990:71CS5 Meth=IE3 Dil=1
Amount: 0.00
Volume: 0.00
Operator: DCG
Client: TA Knoxville
Comments: Inst=m1d/35055-03b Batch=20080624i Ccal=20080624i
Injected volume: 2.00
Sample from Vial 14
Analysis will stop when MID run finishes
Tune file name: tune2
Mcal file name: mcal1.cal
File 3 of list 080624
ICL procedure: sleep7x
MID procedure: epa1668n

MID Remarks: EPA 1668 - 209 PCBs- 2m/z's - 6/29/05

Mid Set Up Parameter:

Measure/lock ratio	1
Damping Relay	FALSE
Width first lock	0.10 amu
Electric jump time	10 ms
Magnetic jump time	60 ms
Offset	75 cts
Electric range	300 %
Sweep peak width	3.00
MID mode	Lock mode
Acq mode	Cent mode

Mid Time Windows:

	Start	Measure	End	Cycletime
# 1	11:00 min	10:40 min	21:40 min	1.00 sec
# 2	21:40 min	14:06 min	35:46 min	1.00 sec
# 3	35:46 min	13:19 min	49:05 min	1.00 sec
# 4	49:05 min	7:55 min	57:00 min	1.00 sec

1 Number of chlorines on congener.

2 Suffix "L" indicated labeled compound.

3 IUPAC Number per Table 2 of Method 1668A.

4 Retention time reference that is used to locate target congener.

5 Quantitation reference that is used to calculate the concentration of the target congener or labeled standard.

6 Average Retention Time of target congener based upon the 15 point ICAL Retention Time Study.

7 RRT between the RT for the congener and the RT for the reference.

8 Nominal limits based on an ± 0.5% of the RRT, adjusted for the nearest eluted isomer.

9 RT window width for congener or group of two or more congeners.

  ICL procedure: sleep7x
  MID procedure: epa1668n

  MID Remarks:  EPA 1668 - 209 PCBs- 2m/z's - 6/29/05

  Mid Set Up Parameter:
   Measure/lock ratio        1
   Damping Relay         FALSE
   Width first lock       0.10 amu
   Electric jump time       10 ms
   Magnetic jump time       60 ms
   Offset                   75 cts
   Electric range          300 %
   Sweep peak width       3.00
   MID mode              Lock mode
   Acq mode              Cent mode

  Mid Time Windows:
        Start         Measure       End        Cycletime
  # 1   11:00 min   10:40 min   21:40 min    1.00 sec
  # 2   21:40 min   14:12 min   35:52 min    1.00 sec
  # 3   35:52 min   13:13 min   49:05 min    1.00 sec
  # 4   49:05 min    7:55 min   57:00 min    1.00 sec

Operator: DCG
Client: TA Knoxville
Comments: Inst=m1d/35055-03b Batch=20080610rt Ccal=20070313i
Injected volume: 2.00
Sample from Vial 12
Analysis will stop when MID run finishes
Tune file name: tune2
Mcal file name: mcal1.cal
File 7 of list 080609
ICL procedure: sleep7x
MID procedure: epa1668n

MID Remarks: EPA 1668 - 209 PCBs- 2m/z's - 6/29/05

Mid Set Up Parameter:

Measure/lock ratio	1
Damping Relay	FALSE
Width first lock	0.10 amu
Electric jump time	10 ms
Magnetic jump time	60 ms
Offset	75 cts
Electric range	300 %
Sweep peak width	3.00
MID mode	Lock mode
Acq mode	Cent mode

Mid Time Windows:

	Start	Measure	End	Cycletime
# 1	11:00 min	10:40 min	21:40 min	1.00 sec
# 2	21:40 min	14:12 min	35:52 min	1.00 sec
# 3	35:52 min	13:13 min	49:05 min	1.00 sec
# 4	49:05 min	7:55 min	57:00 min	1.00 sec

Mid Masses:

ICL Version: 10.710
File name: a0806m3r1
Study: 2990:75 Mix 3
Sample: WO=2990:75Mix3 Meth=IE3 Dil=1
Amount: 0.00
Volume: 0.00
Operator: DCG
Client: TA Knoxville
Comments: Inst=m1d/35055-03b Batch=20080610rt Ccal=20070313i
Injected volume: 2.00
Sample from Vial 13
Analysis will stop when MID run finishes
Tune file name: tune2
Mcal file name: mcal1.cal
File 3 of list 080609
ICL procedure: sleep7x
MID procedure: epa1668n

MID Remarks: EPA 1668 - 209 PCBs- 2m/z's - 6/29/05

Mid Set Up Parameter:

Measure/lock ratio	1
Damping Relay	FALSE
Width first lock	0.10 amu
Electric jump time	10 ms
Magnetic jump time	60 ms
Offset	75 cts
Electric range	300 %
Sweep peak width	3.00
MID mode	Lock mode
Acq mode	Cent mode

Mid Time Windows:

	Start	Measure	End	Cycletime

Analysis stopped at: 11-Jun-08 05:50:07.9 (run time 57.04 minutes)
Analysis stopped because MID run finished

TestAmerica Knoxville Specialty Organics Group GC/MS Continuing Calibration Data Review Checklist 2874
Method or SOP Number: KNOX-ID-0013 Revision 9

Start PFK:	2138	End PFK:	8:46	CS3 Filename:	411071 3s1	Inst:	HRID	ICAL Date:	6.24.08

Review Items	N/A	Yes	No	If No, why is data reportable?	2nd Level
1. Was the mass resolution documented at both the beginning and end of the 12 hour shift?		✓			✓
2. Was the instrument resolution ≥8,000 throughout (≥ 10,000 for m/z 342.9792) and ≥10,000 in the center of each m/z range. PFK m/z 192.9888, *230.9856, and *280.9824? PFK m/z 268.9824, *292.9824, and *380.9760? PFK m/z 342.9792, *380.9760, and *430.9728? PFK m/z 404.9760, *442.9728, and *530.9665?		✓			✓
3. Were the measured exact masses listed above within 5 ppm at reduced accelerating voltage?		✓			✓
4. Was date/time of analysis verified between analysis header and logbook as correct?		✓			✓
5. Were the MID switch points set to encompass the retention time windows of each congener group?		✓			✓
6. Was the valley height less than 40% of the height of the shorter of the two peaks for the pair PCB 23 and PCB 34, and the pair PCB 182 and PCB 187		✓			✓
7. Was the continuing calibration performed at the beginning of the 12 hour period after successful mass resolution and GC resolution performance check?		✓			✓
8. Were the %D for all toxic analytes within ± 30% (PCB 81, 77, 123, 118, 114, 105, 126, 167, 156, 157, 169, 189) Were the %D for all LOC analytes within ± 30% (PCB 1, 3, 4, 15, 19, 37, 54, 104, 155, 188, 202, 205, 206, 208, 209)		✓			✓
9. Were the %D for all non-toxic/non-LOC analytes within ± 30%?		✓			✓
10. If the %D for any non-toxic/non-LOC was not within ± 30, were response factors calculated from the continuing calibration for all non-toxic/non-LOC analytes with a %D greater than ± 30% but within ± 60%.	✓				✓
11. Were the response factors calculated for each labeled standard and unlabeled native analyte using the SOP specified reference compound, quantitation ions, and formula.		✓			✓
12. Were the absolute retention times of all labeled internal standards within ± 15 seconds of the retention times obtained during initial calibration?		✓			✓
13. Are %D within ± 50% for all labeled internal standards in the calibration?		✓			✓
14. Are the %D within ± 30% for all labeled surrogate standards in the calibration.		✓			✓
15. Are the %D within -40/+30% for all labeled cleanup standards in the calibration?		✓			✓
16. Are all S/N ratios ≥10 for the GC signals in each EICP (extracted ion chromatographic profile) including internal standards?		✓			✓
17. Are RRTs of all unlabled toxic/LOC analytes within their respective RRT limits?		✓			✓
18. If PCB 156 and 157 were classified as uniquely resolved in the most recent initial calibration, was the valley between the two less than or equal to the 50% of the height of the shorter of the two peaks?	✓				✓
19. Are the ion abundance ratios for all labeled and unlabeled analytes within the specified control limits?		✓			✓
20. If manual integrations were performed, are they clearly identified, initialed and dated?	✓				✓
21. If criteria were not met, was a NCM generated, approved by supervisor, and copy included in folder?	✓				✓
22. Does the CCAL folder contain **complete** data in the following order? Data review checklist, a **complete** run log, CCAL summary, Ratio summary, Calculation summary, PFK resolution/peak match documentation (HRMS only), and Total RIC, EICP's and manual integration - for window and both standards.		✓			✓

Notes:
a - Concentration value is the sum of all coeluting congeners concentrations.
b - Cleanup standard QC Limits are actually 60% to 130% of the standard concetration.

LCS Lot-Sample# : H1G060000 - 028 MKNTM1AD-LCSD

SURROGATE	PERCENT RECOVERY	RECOVERY LIMITS
	97	(40 - 125)
13C12-PCB 178	86	(40 - 125)
	89	(40 - 125)

Notes:

Calculations are performed before rounding to avoid round-off errors in calculated results.

Bold print denotes control parameters

B Method blank contamination. The associated method blank contains the target analyte at a reportable level.

C Co-eluting isomer.

Miscellaneous Data

TestAmerica Knoxville SOG GC/MS Data Review/Narrative Checklist

Lot # HG050439

SOP Number: KNOX-ID-0013 Revision 9 **Page 1 of 1**

Batch # 1187028

Review Items A. Initial Calibration	N/A	Yes	No	Why is data reportable?	2nd
1. Was the correct ICAL used for quantitation? (Check 1-2 compounds for batch by manually calculating concentration using the ICAL avg. RF.)		✓			✓
B. Continuing Calibration	**N/A**	**Yes**	**No**		**2nd**
1. Has a Continuing Calibration Checklist been completed for each analytical batch?		✓			✓
C. Client Sample AND QC Sample Results	**N/A**	**Yes**	**No**		**2nd**
1. Were all special project requirements met?				See narrative	✓
2. Were the header information, prep factors, and dilution factors verified?		✓			✓
3. Is logbook date/time of analysis correct?		✓			✓
4. Sample analyses done within preparation and analytical holding time (HT)? *If no, list samples:* _____		✓		☐ HT expired upon receipt. ☐ Client requested analysis after HT expired. ☐ Re-extraction done after HT expired.	✓
5. Are internal standards within QC limits? *If no, list samples and reason (e.g.,* **sur1***):* Sample Reason Sample Reason _____ _____ _____ _____ _____ _____ _____ _____ _____ _____ _____ _____		✓		☐ **[sup]** Ion suppression due to matrix. ☐ **[low]** Low recovery. S/N >10 and EDL<ML. ☐ **[sam]** Not enough sample to re-extract. ☐ **[dil]** Dilution showed acceptable %R. ☐ **[mtx]** Obvious matrix interference. Further cleanup not possible.	✓
6. Were peaks ≥2.5 S/N, which did not meet the following criteria, properly calculated and reported as EMPCs? • All analytes within Method/SOP retention time criteria and both ions maximized within ±2 seconds. • The ion abundance ratios for all labeled and unlabeled analytes within the specified control limits.		✓			✓
7. Are all results < the upper calibration level? *If no, list samples:* _____		✓		☐ Sample extracted at lowest possible volume	✓
8. If manual integrations were performed, are they clearly identified, initialed and dated?		✓			✓
9. Final report acceptable? (Results correct, DLs calculated correctly, units correct, IS %R correct, appropriate flags used, dilution factor correct, and extraction/ analysis dates correct.)		✓			✓
10. Was a narrative prepared and all deviations noted?		✓			✓
D. Preparation/Matrix QC	**N/A**	**Yes**	**No**	**Why is data reportable?**	**2nd**
1. LCS done per prep batch and all LCS/LCSD recoveries and RPDs within QC limits? *If no, list ID(s):* _____		✓		☐ LCS/LCSD recoveries are high, no analytes detected above ML. ☐ Re-analysis not possible-insufficient sample ☐ See Comment/narrative	✓
2. Method blank done per prep batch and method blank or instrument blank analyzed with each sequence?		✓			✓
3. Method blank internal standard recoveries within QC limits? *If no, list blank ID:* _____		✓		☐ Internal standards are high and blank is free of contaminants. ☐ Internal standards are low, blank is free of contaminants, S/N>10 and EDL<EML.	✓
4. Are all analytes present in the method blank ≤ EML? *If no, list blank ID:* _____		✓		☐ Sample results are > 20x higher than blank. ☐ No affected analytes > RL in the samples. ☐ Not enough sample for re-extraction.	✓
5. MS/MSD done per batch and are all recoveries and RPDs within laboratory generated QC limits? *If no, list MS/MSD ID:* _____	✓			☐ LCS acceptable indicating sample matrix effects. ☐ LCS acceptable, high analyte concentration. ☐ LCS acceptable, lack of sample homogeneity.	✓
E. Other	**N/A**	**Yes**	**No**		**2nd**
1. Are all nonconformances documented appropriately and copy included with deliverable?	✓				✓

Analyst: CWK	Date: 7-14-11	Analyst: MSD	Date: 7/14/11

TestAmerica Knoxville Prep Batch Review Checklist

Batch # 1187028

Review Items	N/A	Yes	No	If No, why is data reportable?	2nd Level
1. Were the samples extracted within the required holding times?		✓		If No, NCM #: _____	✓
2. Are the final extracts free of water, precipitates, multiple phases, and for HRMS - color?		✓			✓
3. Were all project specific requirements met as noted on the Lot Checklists (L40) and the Sample List report?		✓			✓
4. Were MS Run numbers assigned properly?	✓				✓
5. Were the correct weights and volumes entered into QuantIMS for all samples and QC?		✓			✓
6. Was the correct completion date entered into QuantIMS?		✓			✓
7. Were the spike IDs and volumes entered correctly into QuantIMS?		✓			✓
8. Were all appropriate notes and observations recorded on the extraction benchsheet and in QuantIMS?		✓			✓
9. Was the extraction batch reviewed in QuantIMS using LIM L21?		✓			✓
10. Does the prep batch paperwork package contain all required documentation which has been properly and completely filled out, including: • Extraction Benchsheet • QuantIMS Benchsheet • Lot Checklists (L40) for all lots in batch • Sample List • Compound List Report • SOG Sample Tracking Sheet		✓			✓
11. Are all nonconformances documented appropriately and copy included with deliverable?	✓			If Yes, NCM#: _____	✓

Lot Number	Lot Sample Number	Work Order Number(s)	Suffix	SAC	Place FH/BH sample in med Soxhlet.	Add Method 23 IS (1.0/2.0 ng/mL). Record volume (mL).	Add BNA surr (100/150 µg/mL). Record volume (mL).	Add PCB IS (10 ng/mL). Record volume (mL).	Add PAH IS (0.25 µg/mL). Record volume (mL).	Add Dioxin spike (0.2/1.0/2.0 ng/mL) to LCS/LCSD. Record volume (mL).	Add BNA spike (100 µg/mL) to BNA LCS/LCSD. Record volume (mL).	Add PCB spike (5.0 ng/mL) to LCS/LCSD. Record volume (mL).	Add PAH spike (0.25 µg/mL) & Naphth spike (3.75 µg/mL) to LCS/LCSD. Record volume (mL).	Extract 16 hr with $MeCl_2$. (18-24 hr if SVOCs requested.)	Acetone present in solvent rinse?	Did solvent rinse lose volume during shipment?	Add FH/BH $MeCl_2$ rinse to $MeCl_2$ extract.	Concentrate to ~20 mL in boiling flask. QC to 20 mL.	Extract 16 hr with Toluene.	Add BH Toluene rinse to Toluene extract.	Concentrate to ~10 mL in boiling flask. QC to 10 mL.	Split extracts. Record split ratio.

TESTAMERICA KNOXVILLE SAMPLE RECEIPT/CONDITION UPON RECEIPT ANOMALY CHECKLIST

Lot Number: H1G050439

Review Items	Yes	No	NA	If No, what was the problem?	Comments/Actions Taken
1. Do sample container labels match COC? (IDs, Dates, Times)	✓	✓		☐ **1a** Do not match COC ☐ **1b** Incomplete information ☐ **1c** Marking smeared ☐ **1d** Label torn ☐ **1e** No label ☐ **1f** COC not received ☒ **1g** Other:	2B All samples at proper temp except two samples: (CHV-Stk-ICR2-M23+-ImpsA 27°C) (CHV-Stk-ICR3-M23+-ImpsA 27°C) 1G All samples Recieved on 7/2/11 except the Two samples above they were Recieved on 7/5/11 4A
2. Is the cooler temperature within limits? (> freezing temp. of water to 6 °C, VOST: 10°C)	✓	✓		☐ **2a** Temp Blank = _____ ☒ **2b** Cooler Temp = 27c ☐ **2c** Cooling initiated for recently collected samples, ice present.	
3. Were samples received with correct chemical preservative (excluding Encore)?			✓	☐ **3a** Sample preservative =	
4. Were custody seals present/intact on cooler and/or containers?		✓		☒ **4a** Not present ☐ **4b** Not intact ☐ **4c** Other:	
5. Were all of the samples listed on the COC received?	✓			☐ **5a** Samples received-not on COC ☐ **5b** Samples not received-on COC	
6. Were all of the sample containers received intact?	✓			☐ **6a** Leaking ☐ **6b** Broken	
7. Were VOA samples received without headspace?			✓	☐ **7a** Headspace (VOA only)	
8. Were samples received in appropriate containers?	✓			☐ **8a** Improper container	
9. Did you check for residual chlorine, if necessary?			✓	☐ **9a** Could not be determined due to matrix interference	
10. Were samples received within holding time?	✓			☐ **10a** Holding time expired	
11. For rad samples, was sample activity info. provided?			✓	☐ Incomplete information	
12. For 1613B water samples is pH<9?			✓	If no, was pH adjusted to pH 7 - 9 with sulfuric acid? _____	
13. Are the shipping containers intact?	✓			☐ **13a** Leaking ☐ **13b** Other:	
14. Was COC relinquished? (Signed/Dated/Timed)	✓			☐ **14a** Not relinquished	
15. Are tests/parameters listed for each sample?	✓			☐ **15a** Incomplete information	
16. Is the matrix of the samples noted?	✓			☐ **15a** Incomplete information	
17. Is the date/time of sample collection noted?	✓			☐ **15a** Incomplete information	
18. Is the client and project name/# identified?	✓			☐ **15a** Incomplete information	
19. Was the sampler identified on the COC?		✓

I certify that to the best of my knowledge all analytical data presented in this report:

- Have been checked for completeness
- Are accurate, error-free, and legible
- Have been conducted in accordance with approved protocol, and that all deviations and analytical problems are summarized in the appropriate narrative(s)

This analytical report was prepared in Portable Document Format (.PDF) and contains ??? pages.

Narrative Summary

Enthalpy Analytical Narrative Summary

Company	URS Corporation
Analyst	EO
Parameters	EPA Method 26A

Client #	40942312
Job #	0611-24
# Samples	6 Runs & 5 blanks

Custody	Lindsey Chatterton of Enthalpy Analytical, Inc. received samples on 6/30/11 at 24.7°C and Heather Tarjeft of Enthalpy Analytical, Inc. received samples on 7/5/11 at 27.5 °C after being relinquished by URS Corporation of Austin, TX. The samples were received in good condition. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, Inc.
Analysis	The samples were analyzed for chloride, hydrogen chloride, and hydrogen fluoride using the analytical procedures in EPA Method 26A, Determination of Hydrogen Halide and Halogen Emissions from Stationary Sources Isokinetic Method (40 CFR Part 60, Appendix A). The samples were analyzed following the procedures in Section 11.0, Analytical Procedures. All samples and standards are prepared, stored, and analyzed using high-density polyethylene containers. The Metrohm 861 Compact IC ("Smithers" S/N 1861002007189) was equipped with a Metrohm 861 Conductivity Detector and a Metrosep A Supp 5 - 110/4.0mm (S/N # 7908289) column.
Calibration	The calibration curve is located in the Calibration Curve Chromatograms section of this report and referenced in the Analysis Method column on the Detailed Results page. For each calibration curve used, the first page of the curve contains all method specific parameters (i.e., curve type, origin, weight, etc.) used to quantify the samples. The calibration curve section also includes a table with the Retention Time (RetTime), Level (Lvl), Amount (corresponding units), Area, Response Factor (Amt/Area) and the analyte Name. The calibration table is used to identify (by retention time) and quantify each target compound.
Chromatographic Conditions	The acquisition method METROHM.M is included in the Calibration Curve Chromatograms section of this report.

Enthalpy Analytical Narrative Summary
(continued)

QC Notes	As required in Section 7.2.2, Absorbing Solution Blanks, client-provided reagent blanks were analyzed. Additionally, a quality control check sample was analyzed at the same time as the blanks and samples. All method required acceptance criteria were met. Duplicate matrix spikes were prepared using samples ***CHV-Stk-ICR1-M26A-AcdImp*** and ***CHV-Stk-ICR1-M26A-AlkImp***. The recovery values ranged from 97.1% to 111%. Second source standards were prepared and analyzed along with the samples as Laboratory Control Samples (LCS). The recovery values ragnged from 96.5% to 104%. All sample preparation and analytical holding times specified in the method were met. Section 13.2, Sample Stability, specifies an analytical holding time of four weeks. A confirmation analysis was performed on the sample ***CHV-Stk-ICRRB-M26A-Water***. The data agreed with the initial results. The samples ***CHV-Stk-ICR1-M26A-AcdImp*** and ***CHV-Stk-ICR2-M26A-AcdImp*** did not meet 5% difference in concentration between duplicate injections. The concentrations of these samples were below the limit of quantitation and are considered to be estimated values.
Reporting Notes	The sulfuric acid matrix samples were analyzed for chloride and fluoride but are reported as hydrogen chloride and hydrogen fluoride. The results were converted using a conversion factor of 1.028 for hydrogen chloride and 1.053 for hydrogen fluoride. These analyses met the requirements of the NELAC Standard. Any deviations from the requirements of the reference method and/or the NELAC Standard have been previously noted in this narrative. The results presented in this report are representative of the samples as provided to the laboratory.

Enthalpy Analytical Narrative Summary

Company	URS Corporation
Analyst	KHB
Parameters	EPA SW-846 Method 8315

Client #	40942312
Job #	0611-24
# Samples	1 process sample

Custody	Lindsey Chatterton of Enthalpy Analytical, Inc. received the samples on 7/5/11 at 25.4°C after being relinquished by URS Corporation of Austin, TX. The samples were received in good condition. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, Inc.
Analysis	The samples were analyzed for acetaldehyde, formaldehyde, and propionaldehyde using the analytical procedures in EPA SW-846 Method 8315A, Determination of Carbonyl Compounds by High Performance Liquid Chromatography (HPLC). The Agilent Model 1100, High Performance Liquid Chromatograph ("Bart") was equipped with an Ultraviolet (UV) Detector operating at 360 nm and a Restek Ultra C18, 150 x 4 mm (S/N 100316P) column.
Calibration	The calibration curve is located in the Calibration Curve Chromatograms section of this report and referenced in the Analysis Method column on the Detailed Results page. For each calibration curve used, the first page of the curve contains all method specific parameters (i.e., curve type, origin, weight, etc.) used to quantify the samples. The calibration curve section also includes a table with the Retention Time (RetTime), Level (Lvl), Amount (corresponding units), Area, Response Factor (Amt/Area) and the analyte Name. The calibration table is used to identify (by retention time) and quantify each target compound.
Chromatographic Conditions	The acquisition method 8315ICR.M is included in the Calibration Curve Chromatograms section of this report.
QC Notes	The data is intended for engineering purposes. A matrix spike sample and laboratory duplicate were not prepared and analyzed with the samples.
Reporting Notes	The results presented in this report are representative of the samples as provided to the laboratory.

Enthalpy Analytical Narrative Summary

Company	URS Corporation
Analyst	KTH
Parameters	EPA Method 201A

Client #	40942312
Job #	0611-24
# Samples	3 Runs & 4 blanks

Custody	Lindsey Chatterton and Jordan Laster of Enthalpy Analytical, Inc. received the samples on 7/5/11, 7/6/11, and 7/7/2011 at 25.4°C and ambient temperature after being relinquished by URS Corporation of Austin, TX. The samples were received in good condition. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, Inc.
Analysis	All samples were analyzed in accordance to the requirements and specifications of EPA Method 201A. After evaporating the acetone rinses at room temperature to dryness, the remaining residue was desiccated for 24 hours to a constant weight and weighed twice at 6-hour intervals. All samples were weighed on Balance 8 (Sartorius Model ME 5-F, Serial # 23104965) certified by Mettler Toledo through July 30, 2012.
QC Notes	An acetone blank, Train Blank, and Reagent Blank Filter were received and analyzed with these samples. The organic catch weights are adjusted by a blank correction value. A mathematically determined (theoretical) maximum value is calculated and compared with the actual value measured for the blank. The lower of the two values is used as the blank correction value, which is then factored by the sample volume divided by the blank volume, and subtracted from the sample catch weight.
Reporting Notes	These analyses met the requirements of the NELAC Standard. Any deviations from the requirements of the reference method and/or the NELAC Standard have been previously noted in this narrative. The results presented in this report are representative of the samples as provided to the laboratory.

Enthalpy Analytical Narrative Summary

Company	URS Corporation
Analyst	KTH
Parameters	EPA Method 202

Client #	40942312
Job #	0611-24
# Samples	3 Runs & 12 blanks

Custody

Lindsey Chatterton and Jordan Laster of Enthalpy Analytical, Inc. received the samples on 7/5/11, 7/6/11 and 7/7/2011 at 25.4 °C and ambient temperature after being relinquished by URS Corporation of Austin, TX. The samples were received in good condition. Prior to, during, and after analysis, the samples were kept under lock with access only to authorized personnel by Enthalpy Analytical, Inc.

Analysis

The samples were analyzed for Condensable Particulate Matter using the analytical procedures in EPA Method 202, Determination of Condensible Particulate Emissions from Stationary Sources (40 CFR Part 51, Appendix M).

All samples were weighed on Balance 8 (Sartorius Model ME 5-F, Serial # 23104965) certified by Mettler Toledo through July 30, 2012.

QC Notes

The method specifies blank corrections are accomplished by subtracting the particulate mass determined in the 'Train Blank' or 2 mg (whichever is less) from the sample weight.

The inorganic results for the samples were corrected for the ammonium ions used to precipitate the sulfate, per the formula in the Method (Section 12.2.1).

When the pH of the samples was measured to be 7.0 or greater with the pH meter, no titrant was added.

Reporting Notes

Enthalpy considers gravimetric particulate analyses for to be ±0.5 mg. Therefore, negative catch weights between 0 and –0.5 mg are set to zero and no investigation is undertaken. Negative catch weights < -0.5 mg are investigated.

These analyses met the requirements of the NELAC Standard. Any deviations from the requirements of the reference method and/or the NELAC Standard have been previously noted in this narrative. The results presented in this report are representative of the samples as provided to the laboratory.

General Reporting Notes

The following are general reporting notes that are applicable to all Enthalpy Analytical, Inc. data reports, unless specifically noted otherwise.

- The acronym ***MDL*** represents the Minimum Detection Limit. Below this value the laboratory cannot determine the presence of the analyte of interest reliably.
- The acronym ***LOQ*** represents the Limit of Quantification. Below this value the laboratory cannot quantitate the analyte of interest within the criteria of the method.
- The acronym ***ND*** following a value indicates a non-detect or analytical result below the MDL.
- The letter ***J*** following a value indicates an analytical result between the MDL and the LOQ. A J flag indicates that the laboratory can positively identify the analyte of interest as present, but the value should be considered an estimate.
- The letter ***E*** following a value indicates an analytical result exceeding 100% of the highest calibration point. The associated value should be considered as an estimate.
- The acronym ***DF*** represents Dilution Factor. This number represents dilution of the sample during the preparation and/or analysis process. The analytical result taken from a laboratory instrument is multiplied by the DF to determine the final undiluted sample results.
- The addition of ***MS*** to the Sample ID represents a Matrix Spike. An aliquot of an actual sample is spiked with a known amount of analyte so that a percent recovery value can be determined. This shows what effect the sample matrix may have on the target analyte, i.e. whether or not anything in the sample matrix interferes with the analysis of the analyte(s).
- The addition of ***MSD*** to the Sample ID represents a Matrix Spike Duplicate. Prepared in the same manner as an MS, the use of duplicate matrix spikes allows further confirmation of laboratory quality by showing the consistency of results gained by performing the same steps multiple times.
- The addition of ***LD*** to the Sample ID represents a Laboratory Duplicate. The analyst prepares an additional aliquot of sample for testing and the results of the duplicate analysis are compared to the initial result. The result should have a difference value of within 10% of the initial result (if the results of the original analysis are greater than the LOQ).
- The addition of ***AD*** to the Sample ID represents an Alternate Dilution. The analyst prepares an additional aliquot at a different dilution factor (usually double the initial factor). This analysis helps confirm that no additional compound is present and coeluting or sharing absorbance with the analyte of interest, as they would have a different response/absorbance than the analyte of interest.
- The Sample ID ***LCS*** represents a Laboratory Control Sample. Clean matrix, similar to the client sample matrix, prepared and analyzed by the laboratory using the same reagents, spiking standards and procedures used for the client samples. The LCS is used to assess the control of the laboratory's analytical system. Whenever spikes are prepared for our client projects, two extra spikes are prepared. The extras (randomly chosen) are labeled with the associated project number and kept in-house at the appropriate temperature conditions. When the project samples are received for analysis, the LCSs are analyzed to confirm that the analyte could be recovered from the media, separate from the samples which were used on the project and which may have been affected by source matrix, sample collection and/or sample transport.

General Reporting Notes

(continued)

- **Significant Figures**: Where the reported value is much greater than unity (1.00) in the units expressed, the number is rounded to a whole number of units, rather than to 3 significant figures. For example, a value of 10,456.45 ug catch is rounded to 10,456 ug. There are five significant digits displayed, but no confidence should be placed on more than two significant digits.
- **Manual Integration**: The data systems used for processing will flag manually integrated peaks with an "M". There are several reasons a peak may be manually integrated. These reasons will be identified by the following two letter designations. The peak was ***not integrated*** by the software **"NI"**, the peak was ***integrated incorrectly*** by the software **"II"** or the ***wrong peak*** was integrated by the software **"WP"**. These codes will accompany the analyst's manual integration stamp placed next to the compound name.

Calibration Curve Chromatograms

Calibration Table

Calib. Data Modified : 7/12/2011 9:03:37 AM

Rel. Reference Window : 10.000 %
Abs. Reference Window : 0.000 min
Rel. Non-ref. Window : 10.000 %
Abs. Non-ref. Window : 0.000 min
Uncalibrated Peaks : not reported
Partial Calibration : Yes, identified peaks are recalibrated
Correct All Ret. Times: No, only for identified peaks

Curve Type : Linear
Origin : Connected
Weight : Linear (Amnt)

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :
Printout of recalibrations within a sequence:
Calibration Table after Recalibration
Normal Report after Recalibration
If the sequence is done with bracketing:
Results of first cycle (ending previous bracket)

Signal 1: ADC1 A, ADC1

RetTime [min]	Sig	Lvl	Amount [ug/mL]	Area	Amt/Area	Ref Grp	Name

Method Information

Method: U:\HPLC2010Q1\SMITHERS\METHODS\METROHM.M
Modified: 1/13/2010 at 7:06:26 AM

ANALOG DIGITAL CONVERTER

	Signal 1
Description:	ADC1 A, Metrohm
Source:	Signal
Unit:	mAU
Units/Volt:	100.000
Peakwidth (Data Rate):	0.027 Min (10.00 Hz)
Stop Time:	No Limit
Data Storage:	All

Start Signal Source: External Device Will Start 35900

Timed Event Table:
<no events>

Sequence Table:

Calibration Curve Chromatograms

Calibration Table

Calib. Data Modified : Tuesday, May 31, 2011 11:20:41 AM

Rel. Reference Window : 5.000 %
Abs. Reference Window : 0.000 min
Rel. Non-ref. Window : 5.000 %
Abs. Non-ref. Window : 0.000 min
Uncalibrated Peaks : not reported
Partial Calibration : Yes, identified peaks are recalibrated
Correct All Ret. Times: No, only for identified peaks

Curve Type : Average Response/Amount
Origin : Ignored
Weight : Equal

Recalibration Settings:
Average Response : Average all calibrations
Average Retention Time: Floating Average New 75%

Calibration Report Options :
Printout of recalibrations within a sequence:
Calibration Table after Recalibration
Normal Report after Recalibration
If the sequence is done with bracketing:
Results of first cycle (ending previous bracket)

Report for Total Filterable PM and Other Metals Analysis

TestAmerica
THE LEADER IN ENVIRONMENTAL TESTING

July 22, 2011

TestAmerica Project Number: G1G050412
PO/Contract: Work Order: 252149.US

Chris Weber
URS Corporation
9400 Amberglen Blvd
Austin, TX 78729

Dear Mr. Weber,

This report contains the analytical results for the samples received under chain of custody by TestAmerica on July 2, 2011. These samples are associated with your 40942312 FCCU ICR project.

The test results in this report meet all NELAC requirements for parameters that accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The case narrative is an integral part of this report.

If you have any questions, please feel free to call me at (916) 374-4333.

Sincerely,

Robert Weidenfeld
Project Manager

Case Narrative

TestAmerica West Sacramento Project Number G1G050412

General Comment
The sample fractions reported as matrix spikes are actually post spikes not separate aliquots taken independently through the digestion process.

AIR, ICPMS (6020)-Back Half
Samples: 2, 4, 6, 8
The laboratory method blank associated with the back half fractions is positive for lead slightly above the 0.15 ug reporting limit at 0.17 ug. As the entire sample is consumed in the digestion process, additional corrective action could not be taken.

AIR, ICPMS (6020)-Front Half
Samples: 1, 3, 5, 7
The post spike performed on front half sample -001 (run 2 front half) has a recovery of 77% which is below the 86% lower control limit. The associated laboratory control sample (LCS) has a recovery for this analyte within control limits demonstrating acceptable method performance. The low recovery is most likely matrix related.

There are no additional anomalies associated with this project.

QC Parameter Definitions

QC Batch: The QC batch consists of a set of up to 20 field samples that behave similarly (i.e., same matrix) and are processed using the same procedures, reagents, and standards at the same time.

Method Blank: An analytical control consisting of all reagents, which may include internal standards and surrogates, and is carried through the entire analytical procedure. The method blank is used to define the level of laboratory background contamination.

Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD): An aliquot of blank matrix spiked with known amounts of representative target analytes. The LCS (and LCSD as required) is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. If an LCSD is performed, it may also be used to evaluate the precision of the process.

Duplicate Sample (DU): Different aliquots of the same sample are analyzed to evaluate the precision of an analysis.

Surrogates: Organic compounds not expected to be detected in field samples, which behave similarly to target analytes. These are added to every sample within a batch at a known concentration to determine the efficiency of the sample preparation and analytical process.

Matrix Spike and Matrix Spike Duplicate (MS/MSD): An MS is an aliquot of a matrix fortified with known quantities of specific compounds and subjected to an entire analytical procedure in order to indicate the appropriateness of the method for a particular matrix. The percent recovery for the respective compound(s) is then calculated. The MSD is a second aliquot of the same matrix as the matrix spike, also spiked, in order to determine the precision of the method.

Isotope Dilution: For isotope dilution methods, isotopically labeled analogs (internal standards) of the native target analytes are spiked into the sample at time of extraction. These internal standards are used for quantitation, and monitor and correct for matrix effects. Since matrix effects on method performance can be judged by the recovery of these analogs, there is little added benefit of performing MS/MSD for these methods. MS/MSD are only performed for client or QAPP requirements.

Control Limits: The reported control limits are either based on laboratory historical data, method requirements, or project data quality objectives. The control limits represent the estimated uncertainty of the test results.

Notes(s):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity, pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

SAMPLE SUMMARY

G1G050412

WO #	SAMPLE#	CLIENT SAMPLE ID	SAMPLED DATE	SAMP TIME
MKMWN	001	CHV-Stk-ICR2-M5/29-Front Half	06/24/11	13:31
MKMWV	002	CHV-Stk-ICR2-M5/29-Back Half	06/24/11	13:31
MKMWW	003	CHV-Stk-ICR3-M5/29-Front Half	06/24/11	19:42
MKMW0	004	CHV-Stk-ICR3-M5/29-Back Half	06/24/11	19:42
MKMW6	005	CHV-Stk-ICR4-M5/29-Front Half	06/26/11	17:38
MKMXC	006	CHV-Stk-ICR4-M5/29-Back Half	06/26/11	17:38
MKMXD	007	CHV-Stk-ICRFB-M5/29-Front Half	06/26/11	17:04
MKMXF	008	CHV-Stk-ICRFB-M5/29-Back Half	06/26/11	17:04

NOTE(S):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

110718A2	1196180, 1195193, 1195192	7-18-11	SH

Lot Numbers: G1G050412, G1G010441	YES	NO	NA
1. Copy of analysis protocol used included?	✓		
IS Recovery (Raw Data Value / Upload Data Value)	✓		
2. ICVs & CCVs within 10% of true value or recal and rerun?	✓		
3. ICB & CCBs < reporting limit or recal and rerun?	✓		
4. 10 samples or less analyzed between calibration checks?	✓		
5. All parameters within linear range?	✓		
6. LCS/LCSD within limits?	✓		
7. Prep blank value < reporting limit or all samples >20x blank?	✓		
8. Internal standard intensities for samples (unless followed by dilution) are > 30% and <120% of the Calibration Blank intensities?	✓		
9. Appropriate dilution factors applied to data?	✓		
10. Matrix spike and spike dup within customer defined limits?			✓
11. Each batch checked for presence of internal standard in samples?	✓		
12. Anomalies entered using Clouseau?			✓

COMMENTS: G1G050412 - MS/MSD - rerun for all elements missed to spike. rerun G1G050412 - 1, MS/MSD, 2, 5, 7 for all elements. ESB
