As a fellow Dairyman, we need to have consistency in our requirements. After complying with all agencies regarding our Farm Plan, we ask that this be looked at and that the science behind this effort be qualified. It appears that there are dairymen that are singled out, after acting in good faith to work with the EPA to find best practices. No one will move into the future and work with such an agency, who's agenda is obviously about other things.

You have to ask what the real motivation is behind this effort, and who is leading the charge.
