Laboratory Results Notes, Abbreviations and Units

Notes

Shading indicates that the chemical was detected above the MCL.

Footnotes

^aThe Results column shows a numeric value for the concentration of the chemical if the chemical was detected in the sample. The term "Not Detected" means that the chemical was not detected in the sample above the laboratory detection limit. The term "Result Not Usable" indicates that there were quality assurance or quality control problems with the laboratory analysis of that chemical and there are no results to report.

^bMaximum contaminant levels (MCLs) are the highest level of a contaminant that is allowed in drinking water. MCLs are enforceable standards.

^cNational Secondary Drinking Water Regulations (or secondary maximum contaminant levels [SMCLs]) are non-enforceable guidelines regulating contaminants that may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. EPA recommends secondary standards to water systems but does not require systems to comply. However, states may choose to adopt them as enforceable standards.

^dAny fecal coliform-positive repeat sample or *E. coli* -positive repeat sample, or any total coliform-positive repeat sample following a fecal coliform-positive routine sample constitutes a violation of the MCL for total coliforms. For purposes of the public notification requirements, this is a violation that may pose an acute risk to health.

^eNo more than 5.0% samples total coliform-positive in a month. Every sample that has total coliforms must be analyzed for fecal coliforms; no fecal coliforms are allowed.

^fFive hormones (17-a-estradiol, 17-a-ethynyl-estradiol, 17-b-estradiol, Estriol, and Estrone) were analyzed by two laboratories. The detection limits for these chemicals were different at each laboratory.

^gEPA does not have a MCL level for perchlorate. The human health based standard calculated under Washington State Model Toxics Control Act (MTCA) Cleanup Levels and Risk Calculation (CLARC) tool using Method B is 11ug/L.

^hThe SF6 recharge dating limit is around 1970.

Abbreviations

MCL - Maximum Contaminant Level

MTCA - Model Toxics Control Act

ND - Analysis not done

NM - Insufficient nitrate to complete analysis

NR - Not relevant. The result is a calculated value.

SMCL - Secondary Maximum Contaminant Level

SMOW - standard mean of ocean water

TNTC - Too numerous to count

$\delta^{15}\text{N-NO}_3$ = Nitrogen isotopes of nitrate. Ratio of the nitrogen isotopes ^{15}N and ^{14}N in a specific sample using nitrate compared to a standard of known composition of ^{15}N and ^{14}N . This expressed as the parts per thousand (‰).

$\delta^{15}\text{N-HN}_4$ = Nitrogen isotopes of ammonia. Ratio of the nitrogen isotopes ^{15}N and ^{14}N in a specific sample using ammonia compared to a standard of known composition of ^{15}N and ^{14}N . This expressed as the parts per thousand (‰).

$\delta^{18}\text{O-NO}_3$ = Oxygen isotopes of nitrate. Ratio of the oxygen isotopes ^{18}O and ^{16}O in a specific sample using nitrate compared to a standard of known composition of ^{18}O and ^{16}O . This expressed as the parts per thousand (‰) standard mean of ocean water.

Units

CFU/100 ml = colony forming unit per 100 milliliters

MPN/100 ml = most probable number per 100 milliliters

ug/L = micrograms per liter

mg/L = milligrams per liter

‰ = parts per thousand difference from the atmospheric standard

Data Qualifiers

< = less than

J = The analyte was positively identified. The associated numerical value is an estimate.

R = The data are unusable for all purposes.
