Re: Additional Monitoring Requirements for Horse Corral & Badger Gravel Pits under the National Pollutant Discharge Elimination System Multi-Sector General Permit, Permit Reference No. IDR053216

Dear Mr. Elder:

The purpose of this letter is to notify you of a new monitoring requirement that must be implemented at your facility to maintain permit coverage under the U.S. Environmental Protection Agency's (EPA) 2015 Multi-Sector General Permit for Stormwater Discharges Associated with Industrial Activity (MSGP).

There is a new provision in the State of Idaho's certification of the MSGP:

"9.10.3.3 Monitoring of Discharges to Impaired Waters. ...For water bodies included on the states 303(d) list (Category 5 of the Integrated Report), identified as "cause unknown", the permittee must monitor for the pollutants listed in the cause comments section of the report (e.g., nutrients, metals, pesticides)."

Based on the information provided in your Notice of Intent (NOI), storm water from the C&A Paving Company facility on Pleasant Valley Road in Boise, Idaho (Facility) discharges into Tenmile Creek. The cause comments for Tenmile Creek indicate that nutrients are the cause. As a result, the following nutrient monitoring is required.

Parameter	Target	Reference
Total Phosphorus	0.1 mg/L May 1-Sept 30 0.35 mg/L Oct 1- April 30	Lower Boise River TMDL 2015 Total Phosphorus Addendum

If you have any questions, please contact Margaret McCauley of my staff at (206) 553-1772 or mccauley.margaret@epa.gov.

Sincerely,

Michael J. Lidgard, Manager
NPDES Permits Unit
