Re: Additional Monitoring Requirements for Rambo Sand & Gravel under the National Pollutant Discharge Elimination System Multi-Sector General Permit, Permit Reference No. IDR053199

Dear Ms. Rambo:

The purpose of this letter is to notify you of watershed based monitoring requirements that must be implemented at your facility to maintain permit coverage under the U.S. Environmental Protection Agency's 2015 Multi-Sector General Permit for Storm water Discharges Associated with Industrial Activity (MSGP). Based on the information provided in your Notice of Intent (NOI), storm water from the Rambo Sand & Gravel facility at 2700 South Middleton Road in Nampa, Idaho (Facility) discharges into a wetland draining to into the Deerflat Refuge, which is part of the Lower Boise River watershed. The State of Idaho Department of Environmental Quality has established Total Daily Maximum Loads (TMDLs) for the Lower Boise River watershed for total phosphorus, sediment, and bacteria as *Escherichia coli* (E.coli). The Rambo Nampa facility is listed in Table 9 of the Lower Boise River TMDL 2015 Total Phosphorus Addendum.

Basis for EPA to Add Additional Requirements

Part 2.2.2.1 of the MSGP, Existing Discharge to an Impaired Water with an EPA Approved or Established TMDL, states, "If you discharge to an impaired water with an EPA-approved or established TMDL, EPA will inform you whether any additional measures are necessary for your discharge to be consistent with the assumptions and requirements of the applicable TMDL and its wasteload allocation, or if coverage under an individual permit is necessary per Part 1.2.3." See also Part 6.2.5 of the MSGP (allowing EPA to notify a facility of additional monitoring requirements).

Specific Requirements

Pursuant to Parts 2.2.2.1 and 6.2.4.1 of the MSGP, the Facility is required to conduct storm water monitoring for total phosphorus following the standard benchmark monitoring procedures outlined in the MSGP at Part 6.2.1.

Parameter	Benchmark Values	Source of Value
Total Phosphorus	0.1 mg/L May 1-Sept 30 0.35 mg/L Oct 1- April 30	Lower Boise River TMDL 2015 Total Phosphorus Addendum
TSS	33 mg/L	Lower Boise River TMDL, 2015 Sediment and Bacteria Addendum, Table 27
<i>E.coli</i>	126 cfu/100 mL	Lower Boise River TMDL, 2015 Sediment and Bacteria Addendum, Part 5.4.4

If you have any questions, please contact Margaret McCauley of my staff at (206) 553-1772 or [mccauley.margaret@epa.gov](mailto:mccauley.margaret@epa.gov).

Sincerely,

Michael J. Lidgard  
Manager  
NPDES Permits Unit
